Assistance

Impact  
Wrench

**CAW Series**  
Compact Arm

An impact wrench is used for tightening and loosening screws on crawler track components.

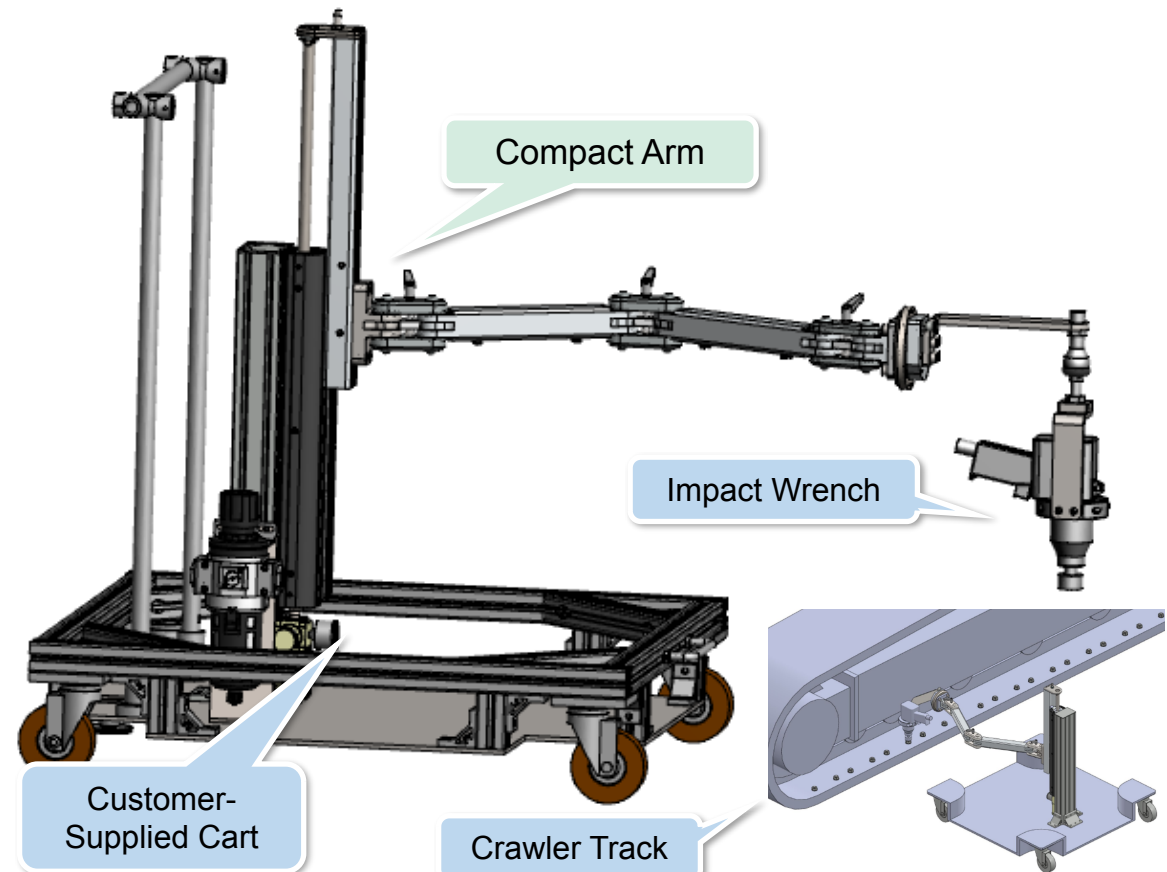

## Before

The large impact wrench was heavy, causing significant physical strain. Mounting the upper nuts required an awkward posture, increasing lower back strain.

## After

The previous crouching posture caused significant arm strain, but the compact arm reduces this strain. The customer-provided mobile cart allows the arm to be moved anywhere, enabling assistance even without a fixed work location.

Axis Configuration	CAW-H-450
Attachment	Custom Jig

Workpiece  
Weight

5kg

Operating  
Frequency

Several hundred cycles/day

**Point**

The custom cart allows operation in any work area.
