

Examples of solutions

Leakage inspection

The drinking water container is filled with gas to detect leaks.

Biochemical culture apparatus

CO₂ flow rate is measured to promote the photosynthesis of organisms.

Air consumption management

The air consumption of facilities that use pneumatic devices is monitored.

Arc welding

Manages argon, gas mixtures (argon + carbon dioxide), and other shielding gases.

Painting air flow rate control

Change the air pressure and controls flow rate used during coating with the electro-pneumatic regulator.

Electronic part installation

Control the tension of gold wire for installing electronic parts.
