CKD

DIRECT DRIVE ACTUATOR PRODUCTS CATALOG

ABSODEX General Catalog

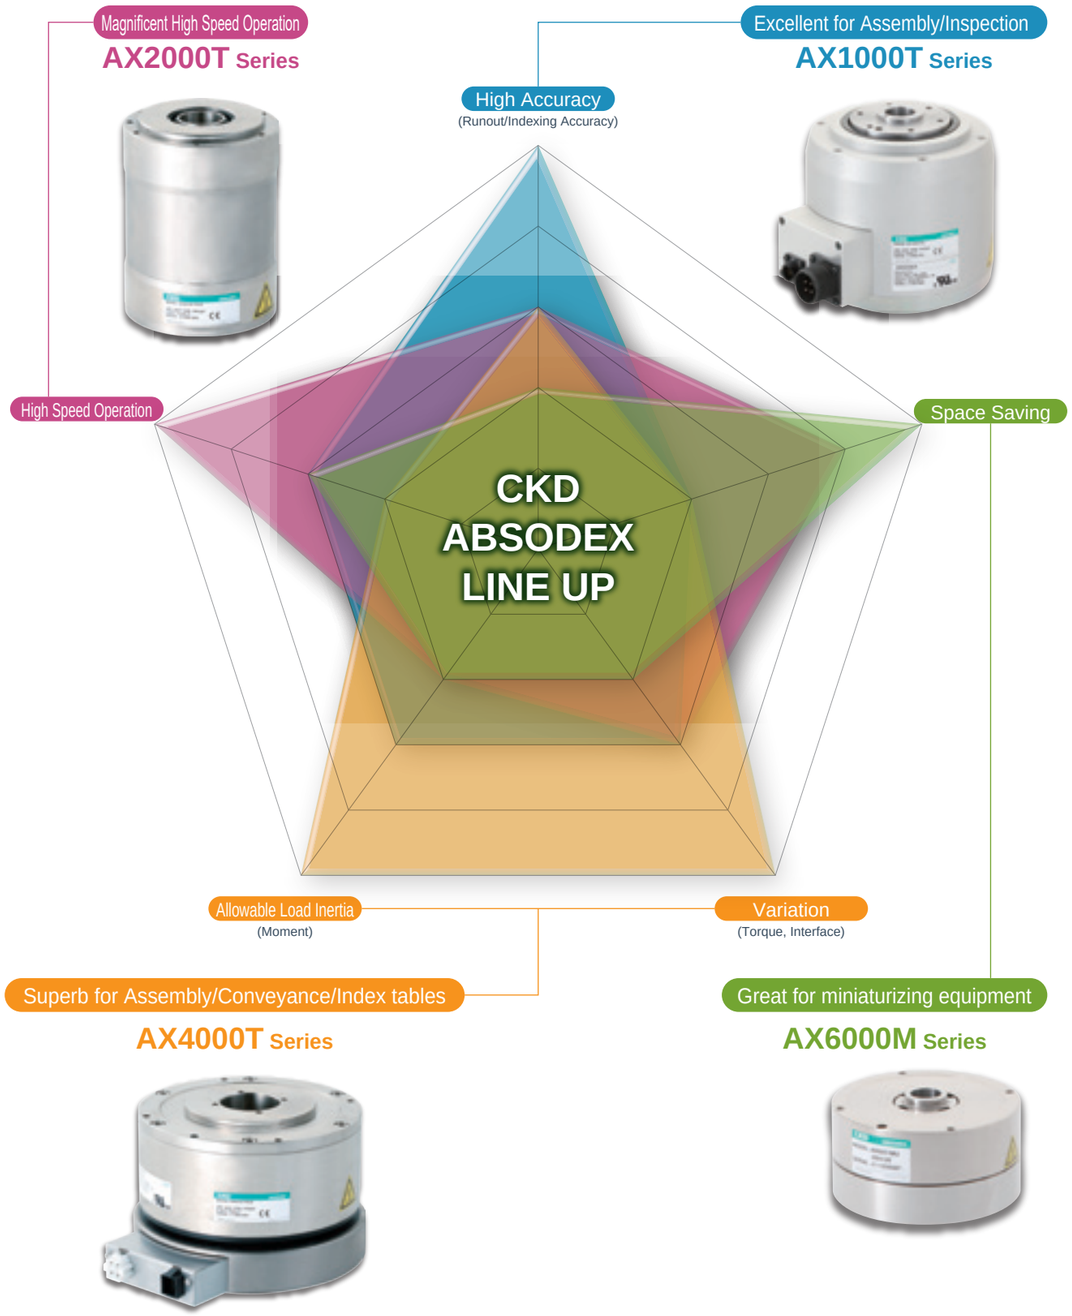
There is a reason why people choose us

CKD Corporation

CB-054A 4

LINEUP

A broad lineup of ABSODEX selectable according to applications/purposes



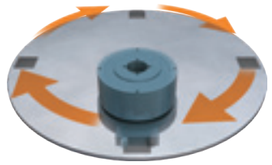
All actuators are absolute types

USABILITY

3 user friendly features of ABSODEX

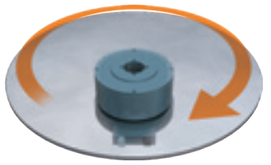
Flexible Operation

With an abundant programming function realize the operation that you want.



Indexing operation

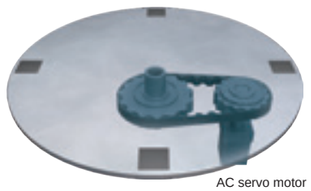
Oscillations



Continuous rotation

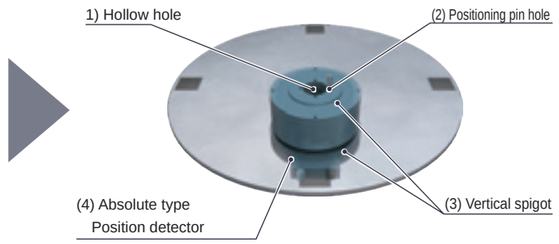
Reduce Workload and Save Space

A simple design with 4 standard useful features.



AC servo motor

Motor + Timing belt

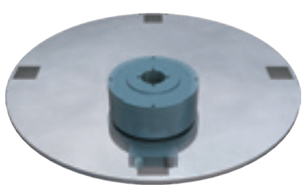


ABSODEX

High reliability & maintenance-free

No more damaged or worn gears from a gearless design.

Concern for gear damage or friction



No worries Gearless structure

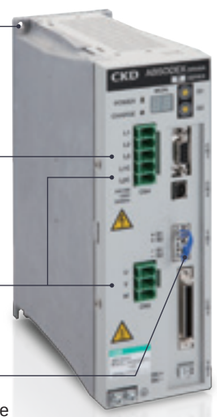
DRIVER

Compatibility

Freely combine compatible drivers and actuators

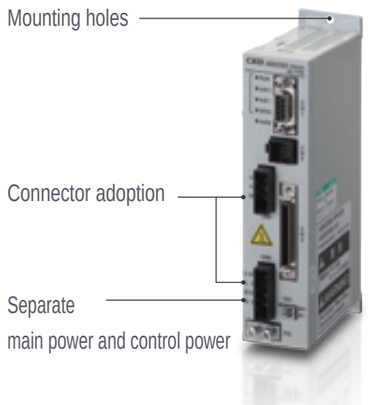
TS/TH driver

(AX1000T, 2000T, 4000T)



MU driver

(AX6000M)

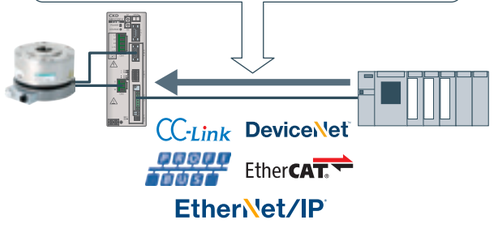


24 VDC adopted for power supply
Realized smaller dimensions.

For the IoT of equipment!

- Monitor function
  (TS/TH wiresaving serial communication)
- Network operation mode
  (TS/TH wiresaving serial communication)

➡ Flexible positioning to any point
➡ Freely program and change parameters with the Network Operation mode



Great usability!

- No need of backup battery for holding absolute position
- Freely combine compatible drivers and actuators

Convenient functions that suit many applications

- Various functions for your usage!
- Segment position output function

SOFTWARE

Operation made easier

The AxTools is here to help you from operation settings to adjustments.

AX Tools is **Easier than ever** to use for both first-time and experienced users.

Intuitive operation with a simple and easy to use interface.

Free software

Desired conditions can be instantly implemented.

In equal segmental programming, only the number of partitions and travel times need to be input.

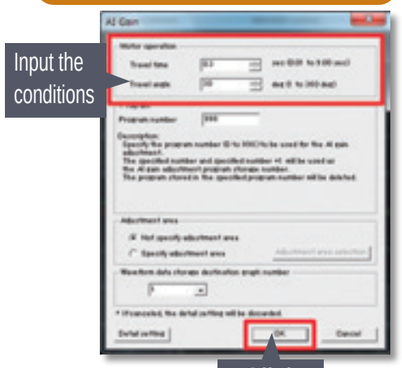
Industry's first! Equipped with an AI that **Supports adjustments**

Conventionally...

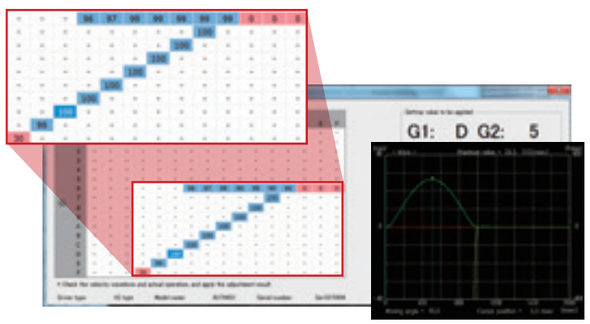
- Tuning relied on experts
- Uncertainty when performing startup overseas
- Determining the quality of adjustment results was difficult

Anyone can use it

Adjustments made by the AI



Data is acquired automatically and the most suited tuning is advised with a score



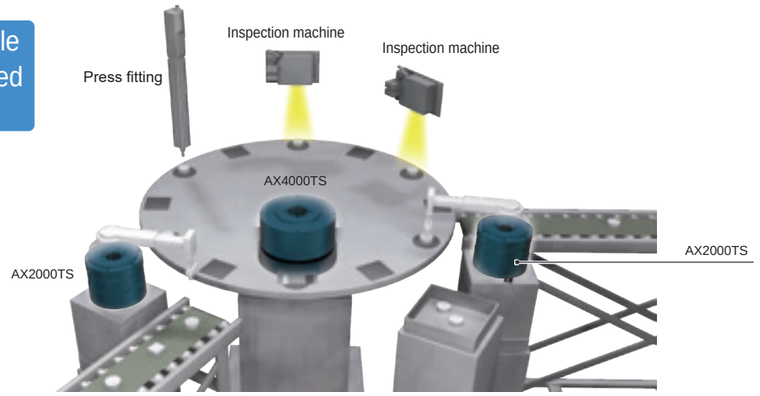
Also, simultaneous confirmation of the operation wavelength is possble

Case Study

Assembly, Inspection Machines

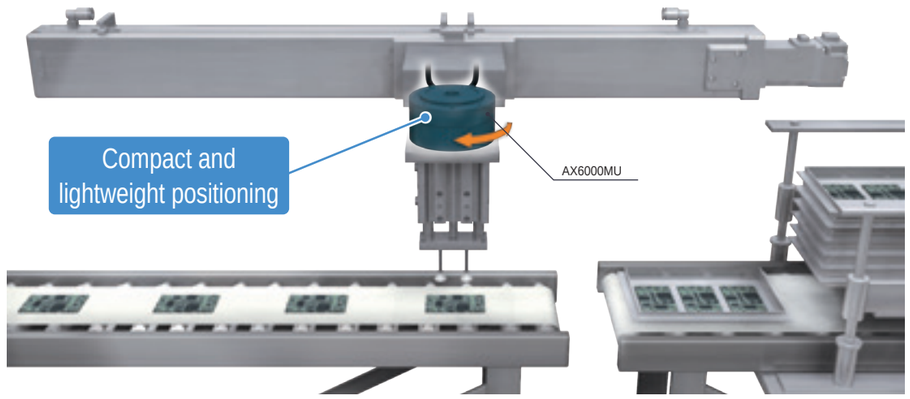
Conduct setup changes without time loss

Operation compatible with mass customized production



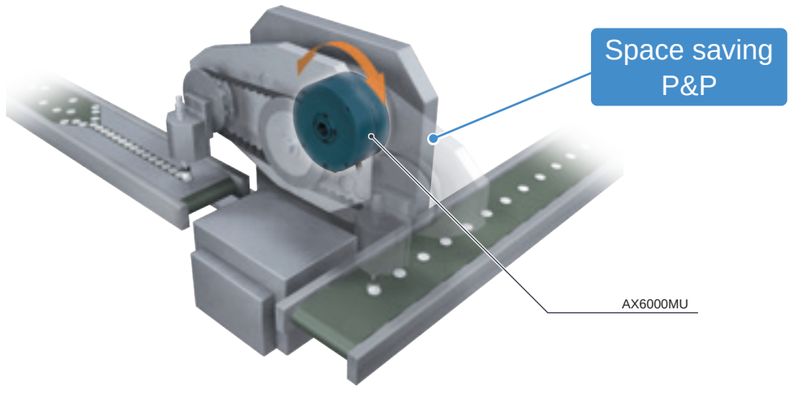
Electronic substrate conveyor

Rotate electronic substrates by 90°



Pick and place device

Work is conveyed using an equipped parallel displacement mechanism.



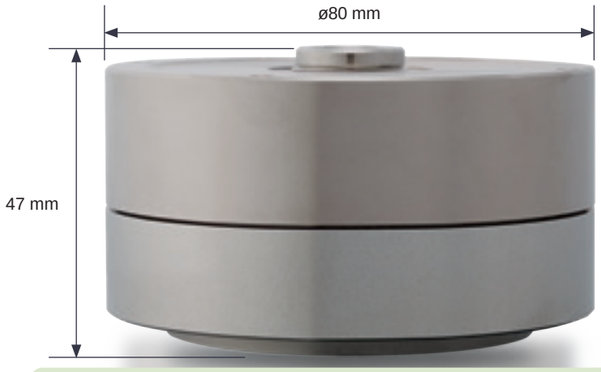
Compact and easy to use

AX6000M Series

Industry's smallest and lightest!

*As of October 2016, CKD research

Weight 1.2kg



Ideal in these situations

- Conveying minute workpieces.
- Θ correction of movable parts.

Compatible with a Wide Range of Needs

AX1000T/AX2000T/AX4000T Series

AX1000T Series

- 5 sizes lined up from 22 to 210 N·m
- Improved indexing accuracy and deflection of shaft/surface, allowing for precise positioning

Most suited for

- Precision measurements
- Inspection machines
- Assembly machines

AX2000T Series

- 3 sizes lined up from 6 to 18 N·m
- High speed operation, compact design

Most suited for

- Pick and Place
- Turn tables
- Assembly machines

AX4000T Series

- 8 sizes lined up from 9 to 1000 N·m
- Wide selection, supporting large inertial loads

Most suited for

- Pick and Place
- Turn tables
- Inspection machines
- Assembly machines

AX9000TS/TH Series

Safety Standards

Safety Standard Certification compatible (Safe Torque Off function)

International Standards

Compliant with UL/cUL (N.A. standards) and CE (European standards)

Support for domestic and international networks

Ideal for the IoT of equipment!!

Abundant monitoring functions

The current status of ABSODEX can be monitored with extensive monitoring functions such as current position, speed, electronic thermal value, and alarm.

Monitor function also available for preventive maintenance!

- Torque load factor: Monitors current torque load factor.
- Acceleration: Monitors current acceleration status.

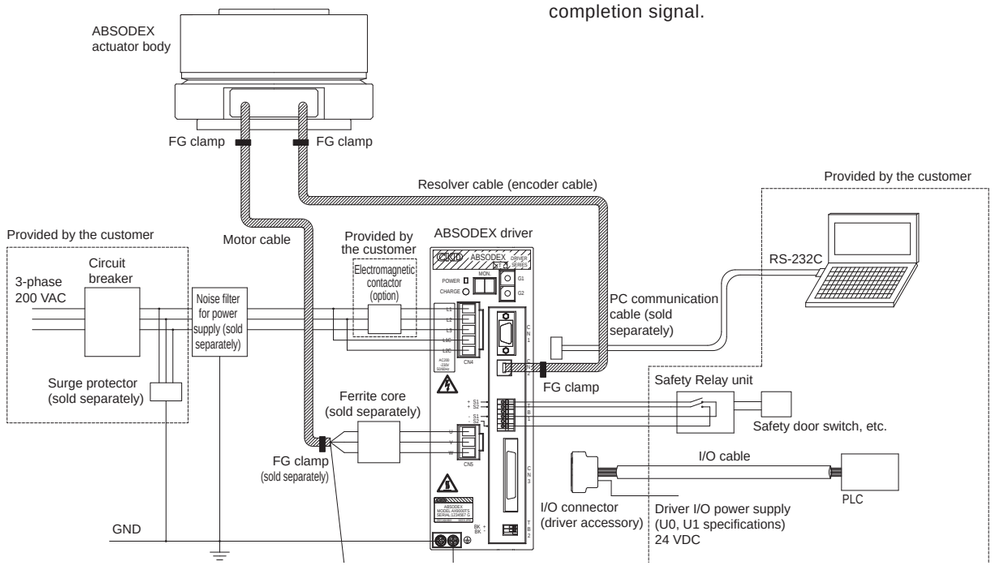
Network operation mode (Direct value mode) added!

The network operation mode allows flexible positioning from the host controller to any position.

System configuration AX1000T/2000T/4000T

● Basic setting items
1. Input a program from a PC or the dialog terminal.
2. Set necessary parameters in the same way.
3. Set the appropriate gain.

● Basic driving methods
1. Select a program to execute from PLC.
2. Input the start signal from the PLC.
3. After indexing is started, the driver outputs a positioning completion signal.



To comply with the CE marking, the parts shown below or overcurrent/short circuit protection Component is required. In addition, the driver must be installed within the switchboard. For details on the selection, installation and wiring methods of these components, refer to the instruction manual or technical data (ABSODEX AX series TS/TH type technical data).

*2

Part name	Application	Model No.	Manufacturer
Noise filter	Three-phase/single-phase 200 to 230 VAC	3SUP-EF10-ER-6	Okaya Electric Industries Co., Ltd.
	Single-phase 100 to 115 VAC	NF2015A-OD	Soshin Electric Co., Ltd.
Ferrite core	Common	RC5060ZZ	Soshin Electric Co., Ltd.
Surge protector	Common	RSPD-250-U4	Okaya Electric Industries Co., Ltd.
		LT-C32G801WS	Soshin Electric Co., Ltd.
FG clamp*1	Common	FGC-5,FGC-8	Kitagawa Industries Co.,Ltd.

*1) Use an FG clamp with a motor cable and resolverUsed to ground the shield of cable (encoder cable).
*2) Parts available for purchase from CKD Refer to the ABSODEX related parts model No. table (page 51).

Configuration (when set model No. is selected)

	Name	Quantity
Standard config.	Actuator	1
	Driver (with controller)	1
	Motor cable, resolver cable (encoder cable)	1 each

Accessories: I/O connector, connector for power supply, connector for motor cable

Note)For the notes on the connection method, make sure to read the instruction manual (technical data).
Note)For details, refer to the accessories supplied with the driver on page 45 (for AX9000TS/AX9000TH).

Programming tool

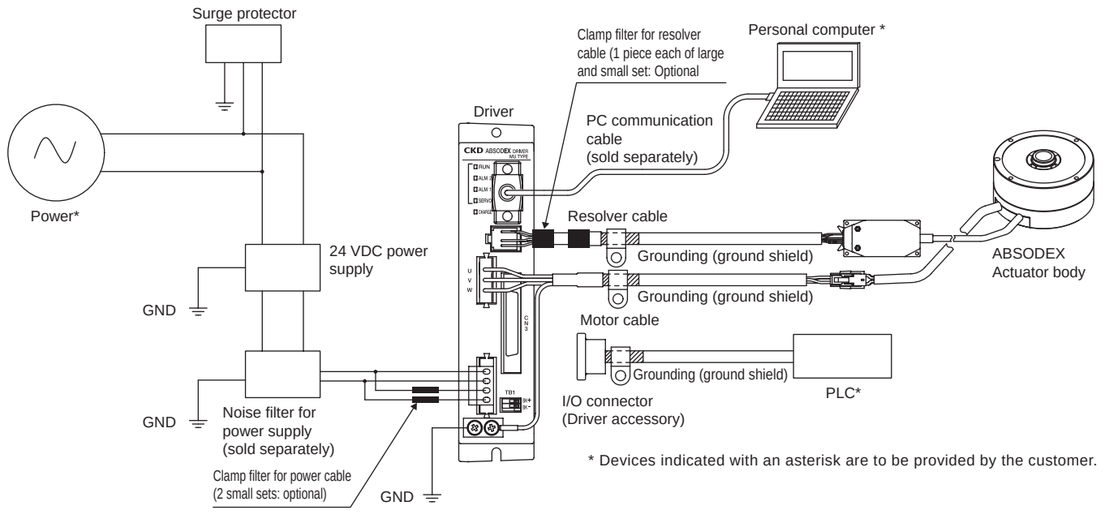
- Dialog terminal "AX0180" is available.
- The "AX Tools" configuration tool is available.
  ABSODEX programs are created, parameters set, and operation commands, etc., issued from the PC. The created program can be saved. The PC communication cable (model No.: AX-RS232C-9P) is required.

Note) The PC communication cable is designed specifically for ABSODEX. You cannot use a commercially available cable as it is. If used by mistake, the driver and PC may become damaged.
Note) Connect the dialog terminal and PC when adjusting only. During normal operation, disconnect the computer communication cable from CN1.
Note) When the PC recovers from the sleep mode, the USB-serial conversion cable may not be recognized, leading to communication errors.
* Please download and use the latest version of the setting tool "AX Tools" from our website.

System configuration AX6000M

● Basic setting items
1. Input the program from the PC.
2. Set the required parameters.
3. Set the appropriate gain.

● Basic driving methods
1. Select a program to be executed from the PLC.
2. The start signal is input from the PLC.
3. After the drive operation, the positioning completion signal is output from the driver.



* Devices indicated with an asterisk are to be provided by the customer.

Configuration (when set model No. is selected)

Name	Quantity
Actuator	1
Driver (with controller)	1
Motor cable and resolver cable	1 each

Included accessories: I/O connector, power supply connector, and open tool for power supply connector
Note) For details, refer to the accessories supplied with the driver in page 7.
Note) The connectors for motor cable come with the motor cable.
Note) For the notes on the connection method, make sure to read the instruction manual (technical data) before use.

To comply with CE marking, the parts listed in the table below are required. For details on the installation and wiring method, refer to the instruction manual or technical data (ABSODEX MU type technical data).

Specification parts	Model No.	Manufacturer
Noise filter	NF2015A-OD *1)	Soshin Electric Co., Ltd.
Surge protector	R/A/V-781BWZ-4 RSPD-250-Q4 RSPD-250-U4	OKAYA ELECTRIC INDUSTRIES CO., LTD.
	LT-C32G801WS	Soshin Electric Co., Ltd.
FG clamp	FGC-5, FGC-8	Kitagawa Industries Co.,Ltd.
Clamp filter for power cable (set of 2 pieces/small)	ZCAT2035-0930A	TDK
Clamp filter set for resolver cable	ZCAT2035-0930A ZCAT3035-1330	TDK

Note 1) This product is specified for use with 250 VAC. It can also be used with 24 VDC.

Programming tool

- The "AX Tools" configuration tool is available.
  (Windows version, free of charge)
  ABSODEX programs are created, parameters set, and operation commands, etc., issued from the PC.
  The created program can be saved.
  The PC communication cable (model No.: AX-RS232C-9P) is required.

Note) The PC communication cable is designed specifically for ABSODEX. You cannot use a commercially available cable as it is. If used by mistake, the driver and PC may become damaged.
Note) Connect the computer communication cable only when performing adjustments. During normal operation, disconnect the computer communication cable from CN1.
Note) When the computer resumes from sleep state, the USB-serial conversion cable may not be recognized, causing communication errors to occur.
Note) Please download and use the latest version of the setting tool "AX Tools" from our website.

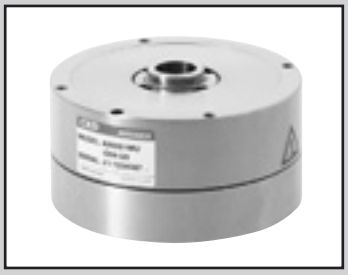
*1 AX410WT

Characteristics of the driver
Drivers can be commonly used for supported actuators. The controller function allows you to use an NC program to desirably set the actuator's rotation angle, movement time, timer, etc. M code output, encoder output, etc., are also available to connect to an external PLC, motion controller, etc.



ABSODEX

AX6000M Series

Minimum size of 80 mm diameter
Compatible function allows free combination of driver, actuator, and cable

- Max. torque: 1.2, 3 N·m
- Supported driver: MU driver

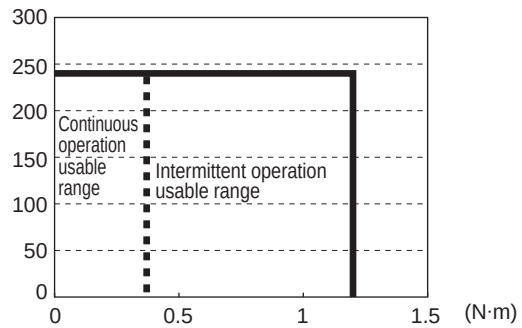
Actuator specifications

Item		AX6001M	AX6003M
Max. output torque	N·m	1.2	3.0
Continuous output torque	N·m	0.4	1.0
Max. rotation speed	rpm	240 (*1)	
Allowable axial load	N	600	
Allowable moment load	N·m	5	
Output shaft moment of inertia	kg·m^2	0.00034	0.00059
Allowable moment of load inertia	kg·m^2	0.034	0.059
Index accuracy (*3)	sec	±90	
Repeatability (*3)	sec	±10	
Output shaft friction torque	N·m	0.13	0.22
Resolution	P/rev	540672	
Motor insulation class		Class A	
Motor withstand voltage		550 VAC 1 minute	
Motor insulation resistance		10 MΩ or more 500 VDC	
Operating ambient temperature		0 to 40°C	
Operating ambient humidity		20 to 85% RH, no condensation	
Storage ambient temperature		-10 to 65°C	
Storage ambient humidity		20 to 90% RH, no condensation	
Atmosphere		No corrosive gas, explosive gas, or dust	
Weight	kg	1.2 (1.4) *2	1.8 (2.0) *2
Output shaft runout (*3)	mm	0.03	
Output shaft surface runout (*3)	mm	0.05	
Degree of protection		IP20	

*1: Use at a speed of 80 rpm or less during continuous rotation operation.
*2: The values in ( ) are the actuator weight with the mounting base option.
*3: Refer to the "Glossary" on page 52 for index accuracy, repeatability, output shaft runout and output shaft surface runout.

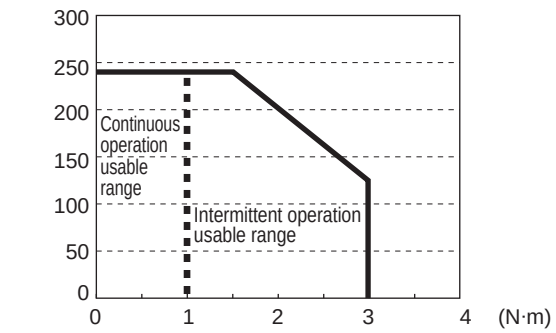
Speed/maximum torque characteristics

● AX6001M



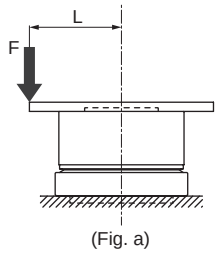
* The graph shows the characteristics when 24 VDC (ambient temperature: 25°C) is connected.

● AX6003M



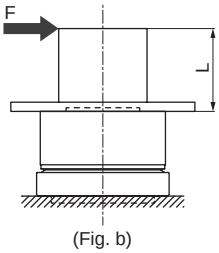
* The graph shows the characteristics when 24 VDC (ambient temperature: 25°C) is connected.

(Note) Moment load (simple formula)



(Fig. a)

M (N·m) = F (N) × L (m)
M: Moment load
F: Load
L: Distance from the output shaft center



(Fig. b)

M (N·m) = F (N) × (L+0.02) (m)
M: Moment load
F: Load
L: Distance from the output shaft flange surface

Always read the safety precautions on pages 61 to 66 before use.

How to order

● Set model No. (actuator, driver, cable)

Body model No. | Option model No.

AX6 001 MU – BS – DM04 – U0

Model No.

Ⓐ Size (max. torque)

Code	Description
001	1.2 N·m
003	3.0 N·m

Ⓑ Driver type

Code	Description
MU	MU driver

Ⓒ Mounting base

Code	Description
Blank	Standard (without mounting base)
BS	With mounting base

Ⓓ Cable length *1

Code	Description
DM00	Without cable
DM02	2 m
DM04	4 m
DM06	6 m
DM08	8 m
DM10	10 m

Ⓔ Interface specifications

Code	Description
U0	Parallel I/O (NPN)
U1	Parallel I/O (PNP)

Precautions for model No. selection

*1: Cable is a movable cable.
Refer to page 9 for dimensions of the cable. The lead-out cable is not movable.
*2: Ⓒ When the "BS" option with the mounting base is selected, the positioning pin hole on the bottom is not available. The surface is treated with electroless nickel plating.
*3: Positioning pin holes may not be surface treated.
*4: The surface part is treated with electroless nickel plating. The fixed section is made of stainless steel.

Actuator body discrete model No.

AX6 001 M – BS

Ⓐ Size Ⓒ Mounting base

Driver discrete model No.

AX9000MU – U0

Ⓔ Interface specifications

Cable discrete model No.

• Motor cable
AX-CBLM8 – DM04

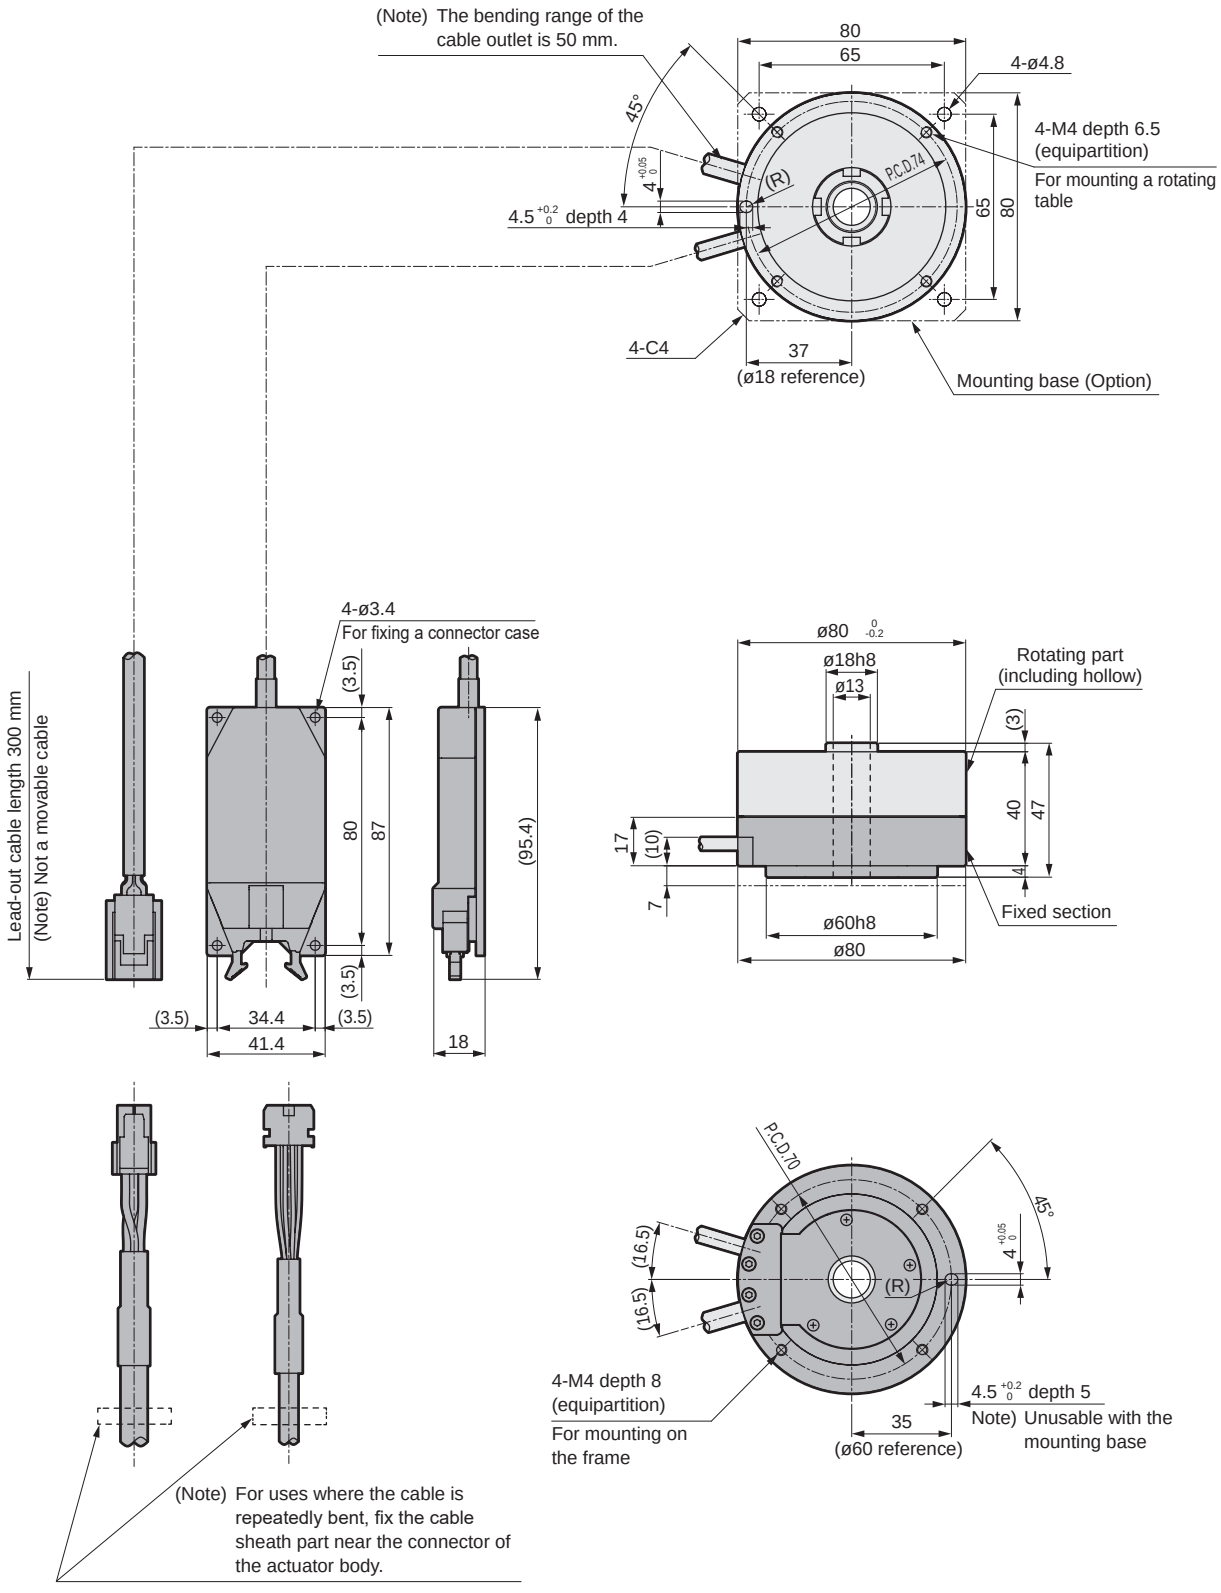
• Resolver cable
AX-CBLR8 – DM04

Ⓓ Cable length
(Note: "DM04" when cable length is 4 m)

Custom order products are CE and RoHS non-compliant. Contact CKD as needed.

Dimensions

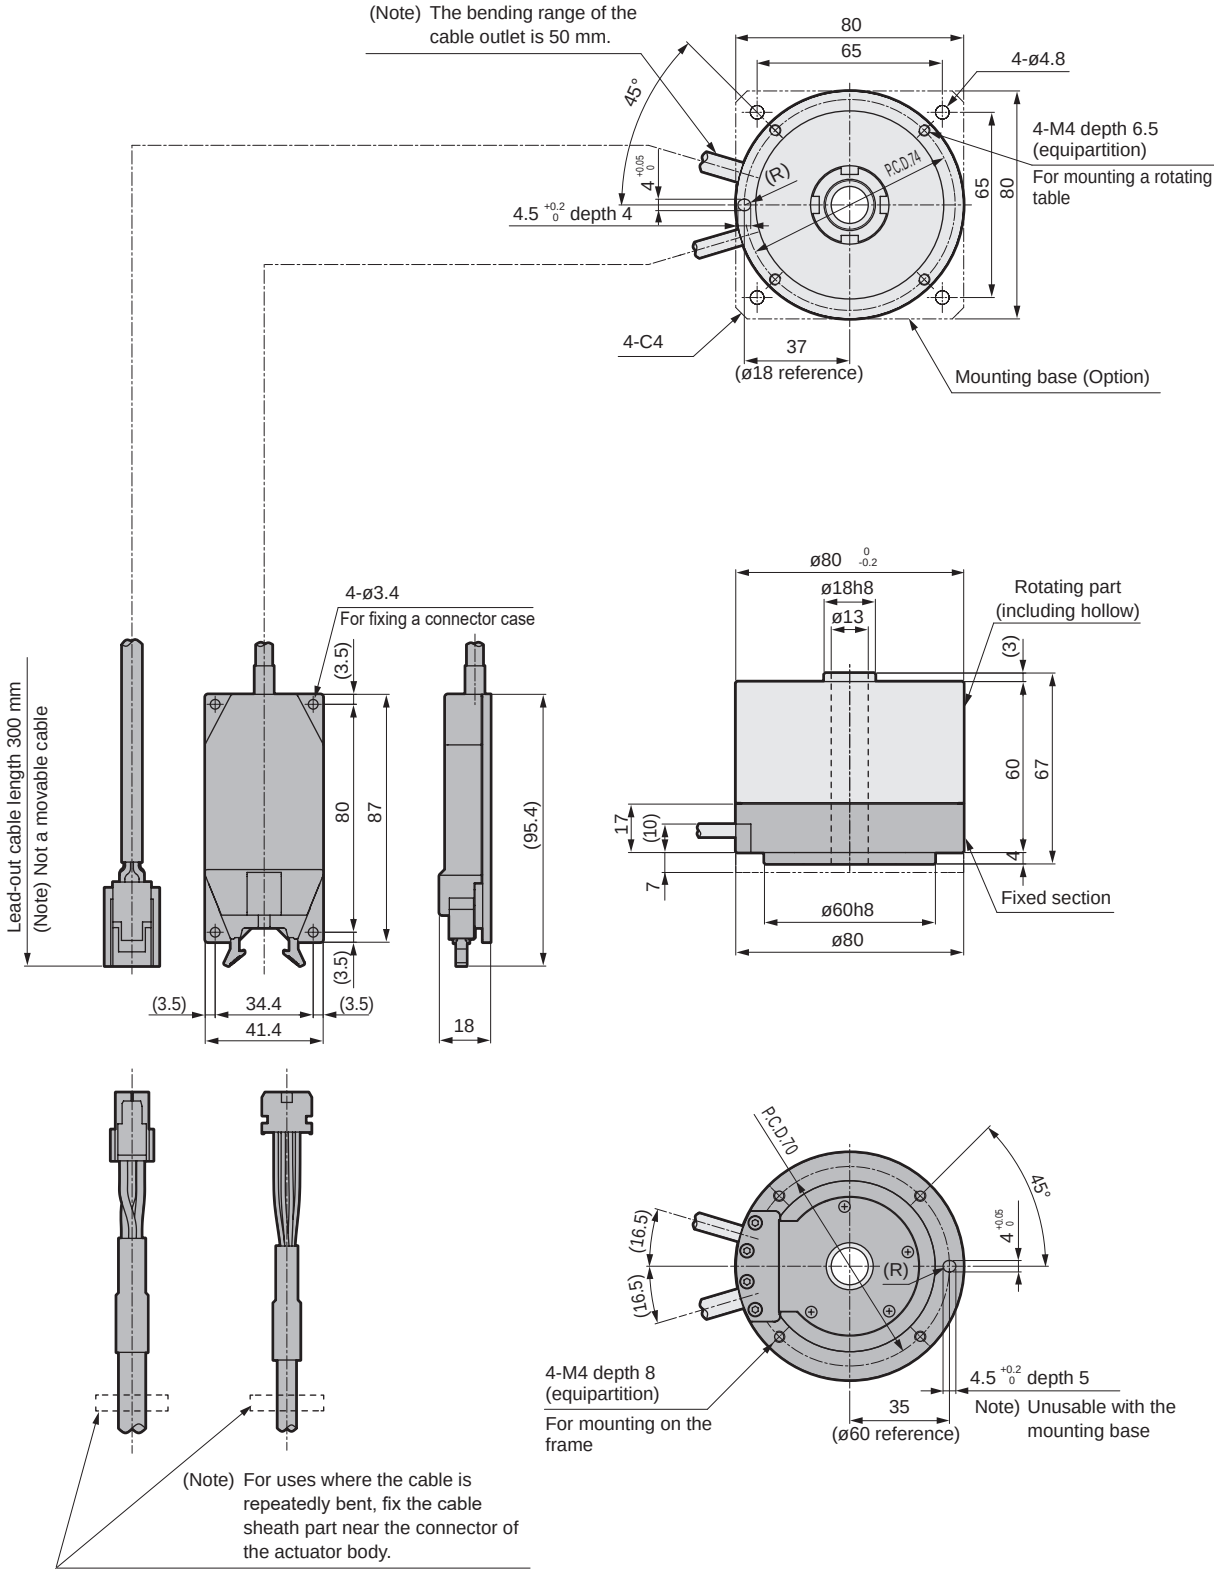
● AX6001M



*1) The origin position of the actuator may differ from that shown in the dimensions.
The origin offset function allows you to set a desired origin position.

Dimensions

● AX6003M



*1) The origin position of the actuator may differ from that shown in the dimensions.
The origin offset function allows you to set a desired origin position.

ABSODEX (AX6000M Series)

MU driver

Interface specifications: Parallel I/O (NPN)
Parallel I/O (PNP)

Features

- Ultra-compact/lighter weight (resin body adopted)
- Easy wiring with connector

How to order

AX9000MU – U0
AX9000MU – U1

Interface specifications
U0: Parallel I/O (NPN)
U1: Parallel I/O (PNP)

General specifications

Item		Model: MU driver AX9000MU
Power supply voltage	Main power supply	24 VDC ±10%
	Control power	24 VDC ±10%
Structure		Driver and controller integrated
Operating ambient temperature		0 to 50°C
Operating ambient humidity		20 to 90% RH (no condensation)
Storage ambient temperature		−10 to 65°C
Storage ambient humidity		20 to 90% RH (no condensation)
Atmosphere		No corrosive gas or dust
Anti-noise		1000 V (P-P), pulse width 1 μsec, rising, falling time 1 nsec impulse noise test, induction noise (capacitive coupling)
Vibration resistance		4.9 m/s^2
Weight		Approx. 0.5 kg
Degree of protection		IP2X

Performance specifications

Item	Description
No. of control axes	1 axis, 540,672 pulses/1 rotation
Angle setting unit	° (degree), pulse, indexing No.
Angle min. setting unit	0.001°, 1 pulse
Speed setting unit	sec, rpm
Speed setting range	0.01 to 100 sec/0.11 to 240 rpm
Equal divisions	1 to 255
Max. command value	7-digit numeric input ±9,999,999 pulse
Timer	0.01 sec to 99.99 sec
Programming language	NC
Programming method	Set data through RS-232C port with a PC.
Operation mode	Auto, MDI, jog, single block, servo OFF, pulse train input mode
Coordinates	Absolute, incremental
Acceleration curve	[5 types] Modified Sine (MS), Modified Constant Velocity (MC/MC2), Modified Trapezoid (MT), Trapecloid (TR)
Status display	RUN: Normal operating state
	ALM2: Alarm 2 state
	ALM1: Alarm 1 state
	SERVO: Servo state
	CHARGE: Charge state
Communication interface	RS-232C compliant
I/O signal	Refer to interface specification pages.
Program capacity	Approx. 6,000 characters (256)
Electronic thermal	Overheating protection for actuator

Power capacity

Actuator model No.	Driver model No.	Rated input current	Max. input current
AX6001M, AX6003M	AX9000MU	3.3 A	10 A

⚠ Always read the safety precautions on pages 61 to 66 before use.

Custom order products are CE and RoHS non-compliant. Contact CKD as needed.

Parallel I/O (NPN)

CN3 Input signal

Pin No.	Signal name	Logic	Determination
1 to 2	External power supply input +24 V ±10%		
3 to 4	External power supply input GND		
5	Program No. selection input (Bit 0)	Positive	Level
6	Program No. selection input (Bit 1)	Positive	Level
7	Program No. selection input (Bit 2)	Positive	Level
8	Program No. selection input (Bit 3)	Positive	Level
9	Program No. setting 2nd digit input/ Program No. selection input (Bit 4)	Positive	Edge Level
10	Program No. setting 1st digit input/ Program No. selection input (Bit 5)	Positive	Edge Level
11	Reset input	Positive	Edge
12	Origin return directive input	Positive	Edge
13	Start input	Positive	Edge
14	Servo on input/Program stop input	Positive	Level Edge
15	Continuous rotation stop input	Positive	Edge
16	Answer input/Position deviation counter reset input	Positive	Edge
17	Emergency stop input	Negative	Level
18	Brake release input	Positive	Level

CN3 Output signal

Pin No.	Signal name	Logic
33	M code output (Bit 0)	Positive
34	M code output (Bit 1)	Positive
35	M code output (Bit 2)	Positive
36	M code output (Bit 3)	Positive
37	M code output (Bit 4)	Positive
38	M code output (Bit 5)	Positive
39	M code output (Bit 6)	Positive
40	M code output (Bit 7)	Positive
41	Imposition output	Positive
42	Positioning completion output	Positive
43	Start input wait output	Positive
44	Alarm output 1	Negative
45	Alarm output 2	Negative
46	Output 1 during indexing/Origin position output	Positive
47	Output 2 during indexing/Servo state output	Positive
48	Ready output	Positive
49	Segment position strobe output	Positive
50	M code strobe output	Positive

CN3 pulse train input signal

Pin No.	Signal name
19	PULSE/UP/A phase
20	-PULSE/-UP/-A phase
21	DIR/ DOWN/ B phase
22	-DIR/-DOWN/-B phase

CN3 encoder output signal (Incremental)

Pin No.	Signal name
23	A phase (Line driver output)
24	-A phase (Line driver output)
25	B phase (Line driver output)
26	-B phase (Line driver output)
27	Z phase (Line driver output)
28	-Z phase (Line driver output)

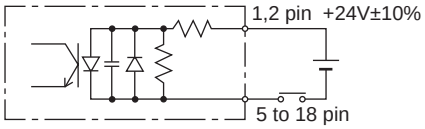
Input/output circuit specifications

Description	1 circuit current (mA)	Max. points (Circuit)	Max. current (mA)	Max. power consumption (mA)
Input circuit	4	14	56	746
Output circuit	30	18	540	
Brake output (BK+, BK−)	75	2	150	

* The maximum simultaneous output points of the output circuit are 14 points out of 18 points.

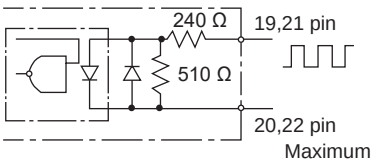
CN3 input/output circuit specifications

● Input circuit



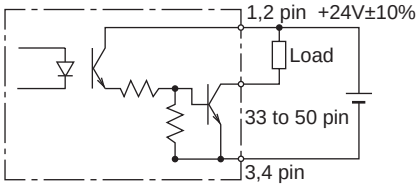
Rated voltage 24 V ±10%
Rated current 4 mA (24 VDC)

● Pulse train input circuit



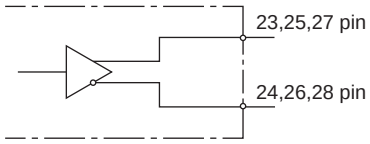
Rated voltage 5 V ±10%
Maximum input frequency
Line driver 1 Mpps
Open collector 250 Kpps

● Output circuit



Rated voltage 24 V ±10%
Rated current 30 mA (MAX)

● Encoder output circuit



Output format: Line driver
Line driver: DS26C31

Always read the safety precautions on pages 61 to 66 before use.

* Custom order products are CE and RoHS non-compliant.

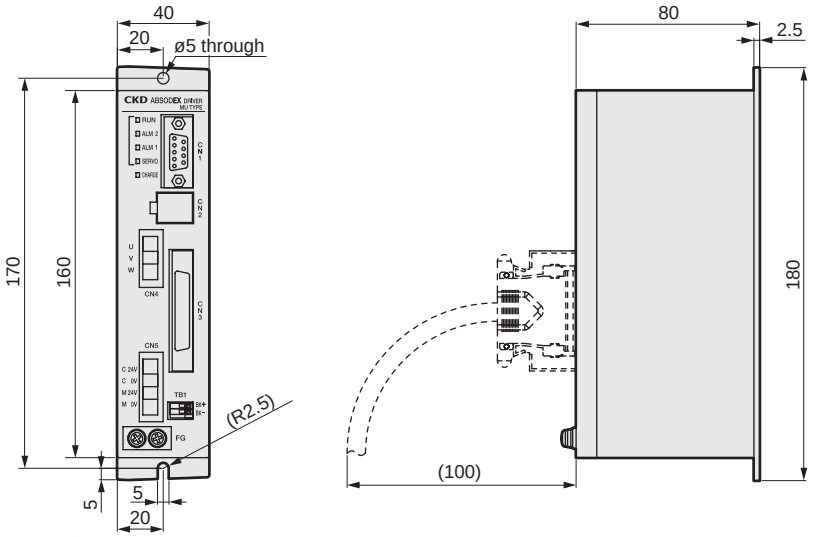
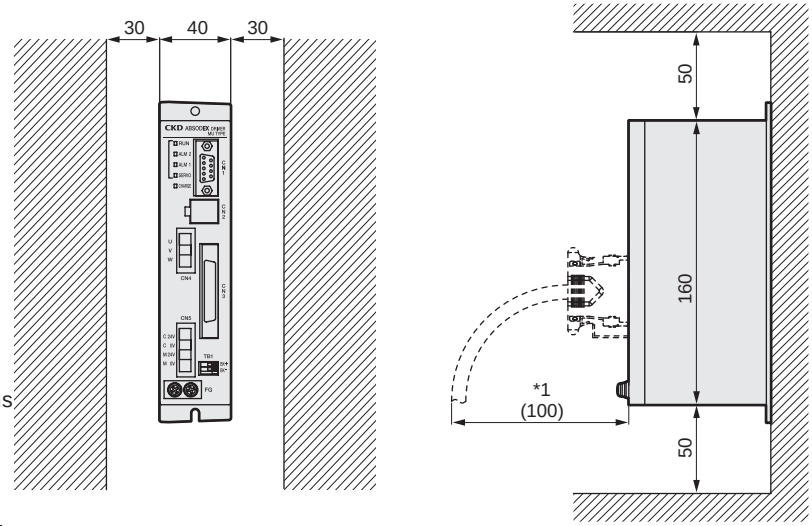
AX9000MU-U1	Parallel I/O (PNP)		

When ordering additional parts, refer to "How to order".

Dimensions



Installation Dimensions



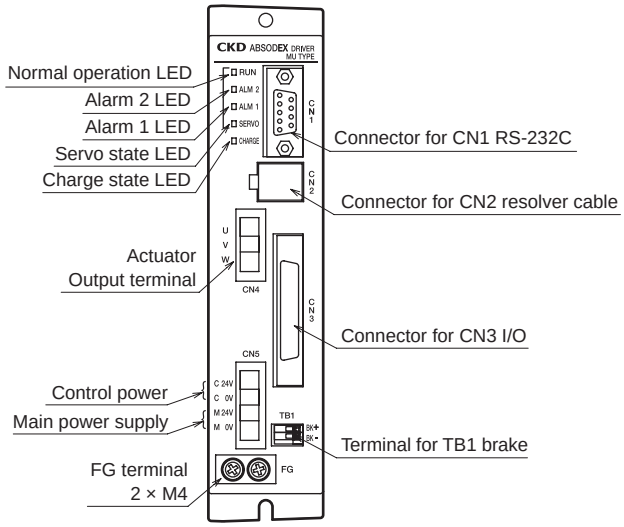
*1) Determine the dimensions with extra allowance according to the cable you want to use.

Safety precautions

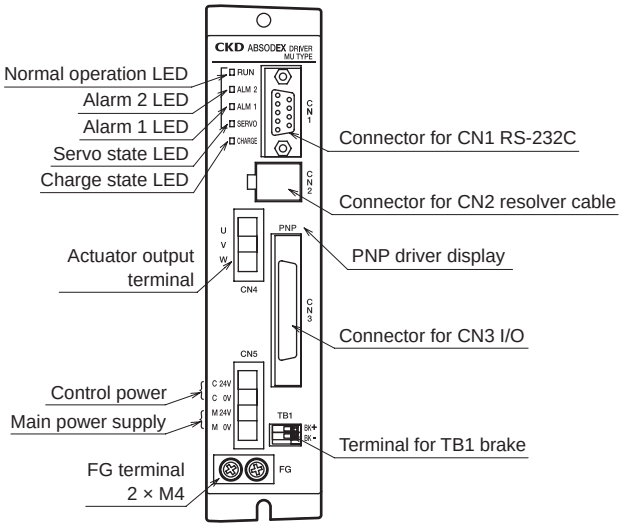
- The ABSODEX driver does not have a dust-proof/waterproof structure. To prevent dust, water, oil or other substances from entering the driver, provide protection according to the working environment.
- Install the ABSODEX driver away from other devices, walls or other structures by 50 mm or more from both top and bottom and 30 mm or more from sides. When heat is generated from other drivers or devices, check that the ambient temperature does not exceed 50°C.

Panel Details

● Parallel I/O (NPN)

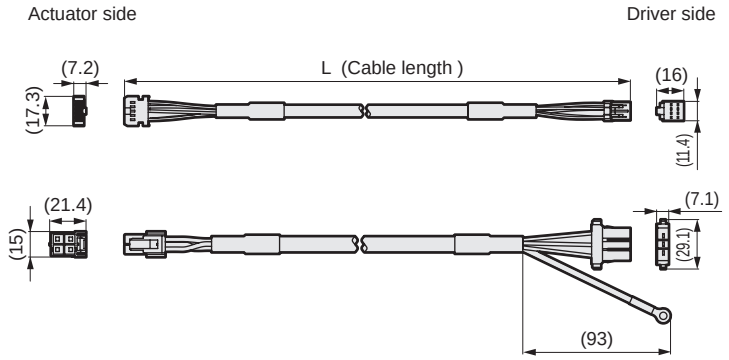


● Parallel I/O (PNP)



Cable Specifications

Cable dimensions



Product name/model No.	Cable's min. bending radius
Resolver cable AX-CBLR8-DM□□ (*1)	60 mm
Motor cable AX-CBLM8-DM□□ (*1)	90 mm

*1) □□ indicates the cable length.

Safety precautions

- For uses in which the cable is repeatedly bent, fix the cable sheath part near the connector of the actuator body.
- The lead-out cable of the actuator section is not movable. Make sure to fix the cable in the connector section to prevent the cable from moving. Do not pull the lead-out cable to lift the unit or apply excessive force to the cable. Otherwise, malfunction, sounding of an alarm, damage of the connector part, or disconnection may result.
- When connecting the cable, fully insert the connector. Also, tighten the connector mounting screws and fix screws securely.
- Do not modify the cable, including disconnection or extension. Such modification may cause failure or malfunction.
- For the cable length L, refer to the cable length shown in the How to order.

MEMO

ABSODEX

AX1000T Series

High accuracy specifications (index accuracy, output shaft runout, etc.)
Compatible function allows free combination of driver, actuator, and cable

- Max. torque: 22/45/75/150/210 N·m
- Supported driver: TS/TH driver

Actuator specifications

Item		AX1022T	AX1045T	AX1075T	AX1150T	AX1210T
Max. output torque	N·m	22	45	75	150	210
Continuous output torque	N·m	7	15	25	50	70
Max. rotation speed	rpm	240 (*1)		140 (*1)	120 (*1)

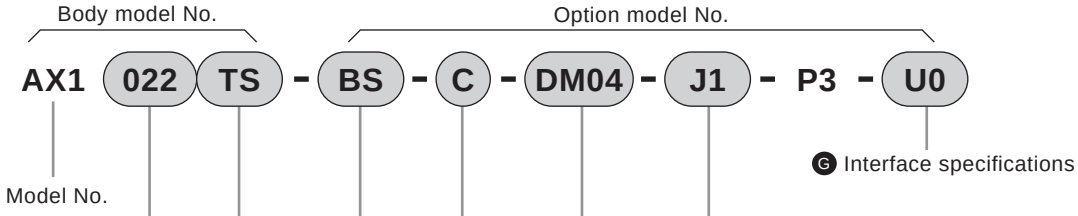
*1: Use at a speed of 80 rpm or less during continuous rotation operation.
*2: The values in ( ) are the actuator weight with the mounting base option.
*3: Refer to the "Glossary" on page 52 for index accuracy, repeatability, output shaft runout and output shaft surface runout.
*4: When using as a UL certified product, the maximum temperature is 40°C.

⚠ Always read the safety precautions on pages 61 to 66 before use.

How to order

● Set model No. (actuator, driver, cable)



A Size (max. torque)

Code	Description
022	22 N·m
045	45 N·m
075	75 N·m
150	150 N·m
210	210 N·m

B Driver type *1

Code	Description
TS	TS type with driver
TH	TH driver

C Mounting base

Code	Description
Blank	Standard (without mounting base)
BS	With mounting base

D Connector mounting direction

Code	Description
Blank	Standard (connector horizontal mounting)
C	Connector downward mounting

E Cable length *3

Code	Description
DM00	Without cable
DM02	2 m
DM04	4 m (standard length)
DM06	6 m
DM08	8 m
DM10	10 m
DM15	15 m
DM20	20 m

F Driver power voltage *1

Refer to the driver power voltage compatibility table at left.

G Interface specifications

Code	Description
U0	Parallel I/O (NPN specifications)
U1	Parallel I/O (PNP specifications)
U2	CC-Link
U3	PROFIBUS-DP
U4	DeviceNet
U5	EtherCAT
U6	EtherNet/IP

Precautions for model No. selection

*1: Select the driver according to the compatibility table below.

Driver power voltage compatibility table

Drivers type / Model	TS driver		TH driver
	Three-phase/ single-phase 200 to 230 VAC	Single phase 100 to 115 VAC	Three-phase/ single-phase 200 to 230 VAC
AX1022T	Blank	J1	
AX1045T	Blank	J1	
AX1075T	Blank *2		
AX1150T			Blank *2
AX1210T			Blank *2

*2: For models with maximum torque 75 N·m or more, the calculation of torque limit region is different from the usual when used at single-phase 200 VAC. Contact CKD to determine usability.

*3: Cable is a movable cable.
Refer to page 48 for dimensions of the cable.

*4: C When the "BS" option with the mounting base is selected, the positioning pin hole on the bottom is not available. The surface is treated with electroless nickel plating.

*5: Positioning pin holes may not be surface treated.

Degree of protection		IP20			

*1: Use at a speed of 80 rpm or less during continuous rotation operation.
*2: When using in load conditions up to those given in ( ), set parameter 72 (integral gain magnification) = 0.3 (reference value).
*3: The values in ( ) are the actuator weight with the mounting base option.
*4: Contact CKD whenever using continuous rotation operation in combination with parameter 72 (integral gain magnification).
*5: Refer to the "Glossary" on page 52 for index accuracy, repeatability, output shaft runout and output shaft surface runout.
*6: When using as a UL certified product, the maximum temperature is 40°C.

Electromagnetic brake specifications (option)

Item \ Compatibility		AX4022T/AX4045T	AX4075T
Type		Non-backlash dry type non-excitation type	
Rated voltage	V	24 VDC	
Power capacity	W	30	55
Rated current	A	1.25	2.30
Static friction torque	N·m	35	200
Armature release time (brake on)	msec	50 (reference value)	50 (reference value)
Armature suction time (brake off)	msec	150 (reference value)	250 (reference value)
Retention accuracy	Minutes	45 (reference value)	
Max. operating frequency	times/min	60	40

*1: During output shaft rotation, the electromagnetic brake disc and fixed part may cause a scraping sound. Also, impact noise is generated when electromagnetic brakes operate.
*2: For travel after brake off, you must change the parameter delay time by the above-mentioned armature suction time.
*3: Though it is a non-backlash type, holding a constant position is difficult if load is applied in the rotation direction. It is not for maintaining braking/precision.
*4: Manual release of the electromagnetic brake is possible by evenly tightening the bolts in the manual release tap (3 locations).
*5: Use a non-magnetic material (SUS303, etc.) when putting a shaft through the hollow hole in the type with magnetic brakes. Peripheral devices may be affected due to magnetization.

Please read the technical data and user's manual for details on the precautions.

⚠ Always read the safety precautions on pages 61 to 66 before use.

How to order

U2	CC-Link
U3	PROFIBUS-DP
U4	DeviceNet
U5	EtherCAT
U6	EtherNet/IP

Precautions for model No. selection

*1: Select the driver according to the compatibility table below.

Driver power voltage compatibility table

Drivers type / Model	TH driver Three-phase/single-phase 200 to 230 VAC
AX4150T	Blank *2
AX4300T	Blank *2
AX4500T	Blank *2
AX410WT	Blank *2

*2: The calculation of torque limit region is different from the usual when used at single-phase 200 VAC. Contact CKD to determine usability.

*3: Cable is a movable cable.
Refer to page 48 for dimensions of the cable.

*4: C When the "BS" option with the mounting base is selected, the positioning pin hole on the bottom is not available. The surface is treated with electroless nickel plating.

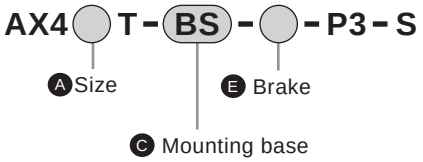
*5: When selecting an electromagnetic brake, refer to the precautions (Page 65) for instructions on how to connect electromagnetic brakes.
For options, select according to the "Option compatibility table" below.
Option compatibility table

	AX4150T	AX4300T	AX4500T	AX410WT
Electromagnetic brake (-EB)	○	○	×	×

*6: Positioning pin holes may not be surface treated.

*7: The surface is treated with electroless nickel plating.

● Actuator body discrete model No.



● Driver discrete model No.

● 200 to 230 VAC

● Cable discrete model No.

● Motor cable

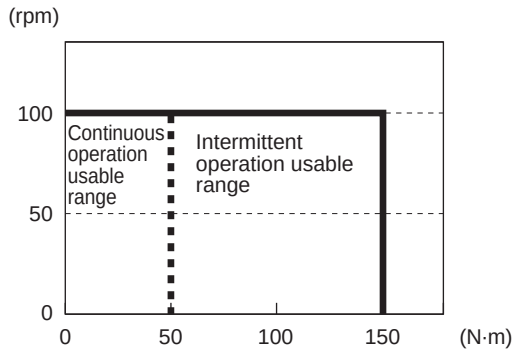
● Resolver cable

D Cable length
(Note: "DM04" when cable length is 4 m)

* Custom order products are CE, UL/cUL, and RoHS non-compliant. Contact CKD as needed.

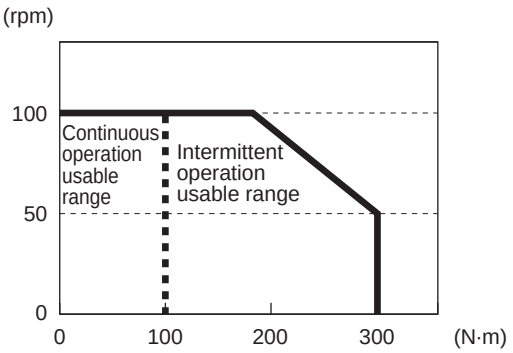
Speed/maximum torque characteristics

● AX4150T



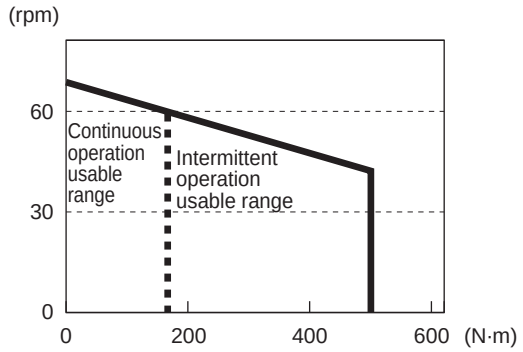
* Fig. This graph shows the characteristics for 3-phase 200 VAC.

● AX4300T



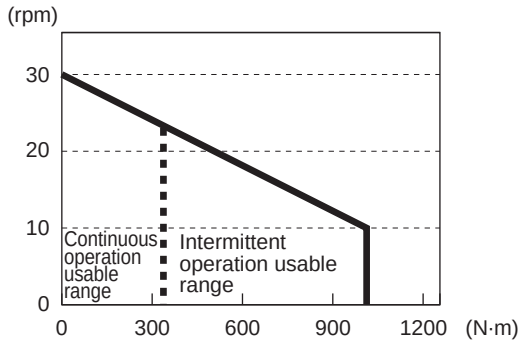
* Fig. This graph shows the characteristics for 3-phase 200 VAC.

● AX4500T



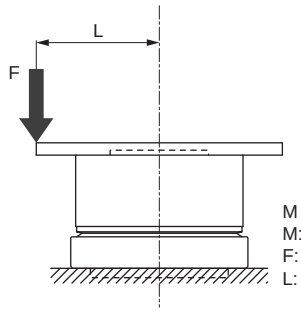
* Fig. This graph shows the characteristics for 3-phase 200 VAC.

● AX410WT



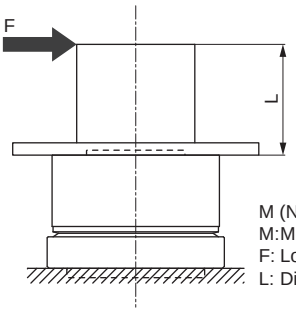
* Fig. This graph shows the characteristics for 3-phase 200 VAC.

(Note) Moment load (simple formula)



M (N·m) = F (N) × L (m)
M:Moment load
F: Load
L: Distance from output shaft center

(Fig. a)



M (N·m) = F (N) × (L + 0.02) (m)
M:Moment load
F: Load
L: Distance from output shaft flange

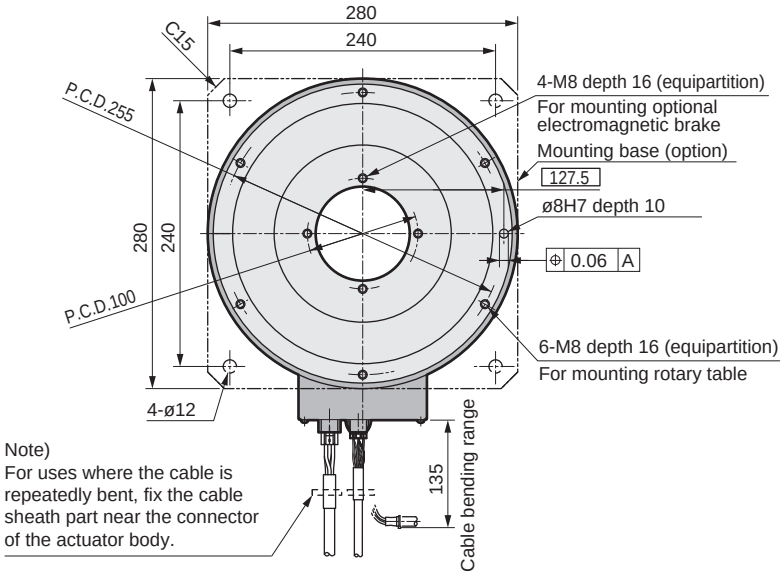
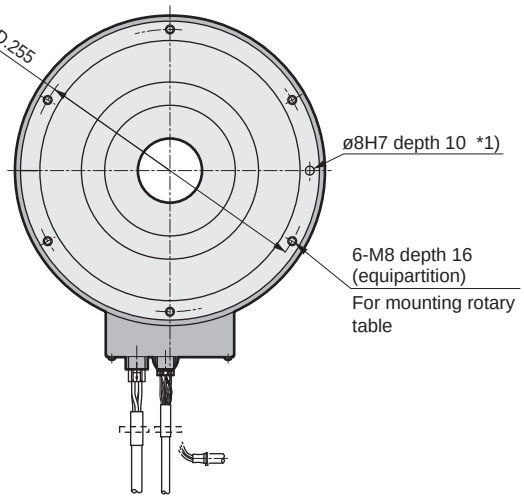
MEMO

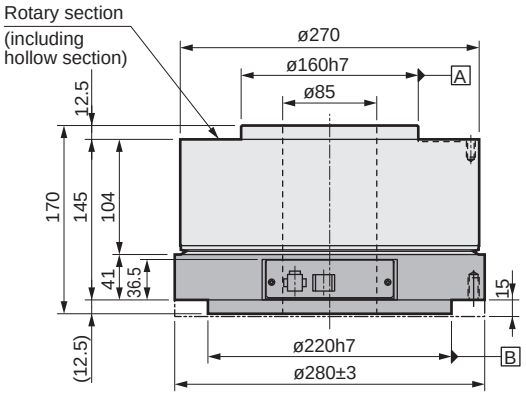
Dimensions

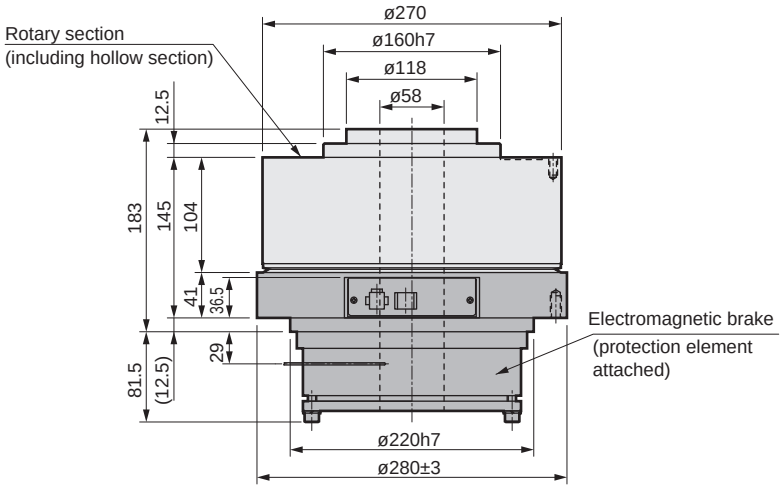
● AX4150T

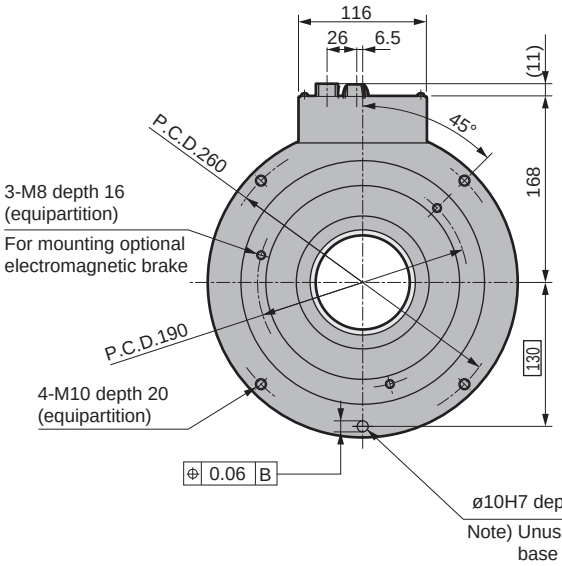


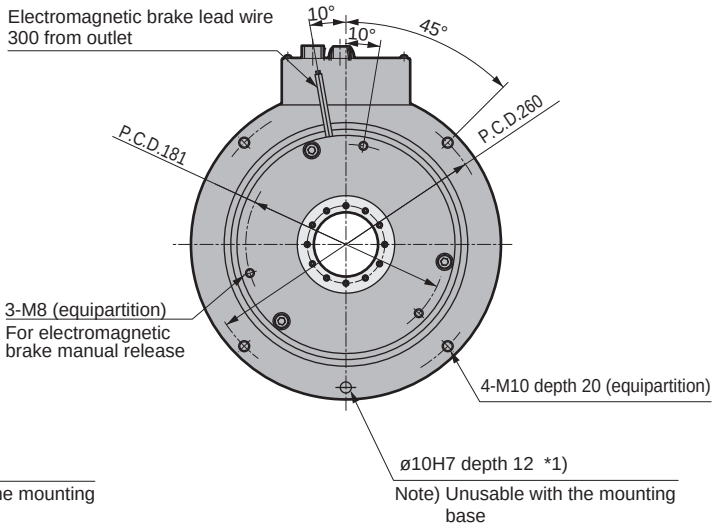
● AX4150T-EB
Electromagnetic brake
For other options, refer to the left figure on the left.







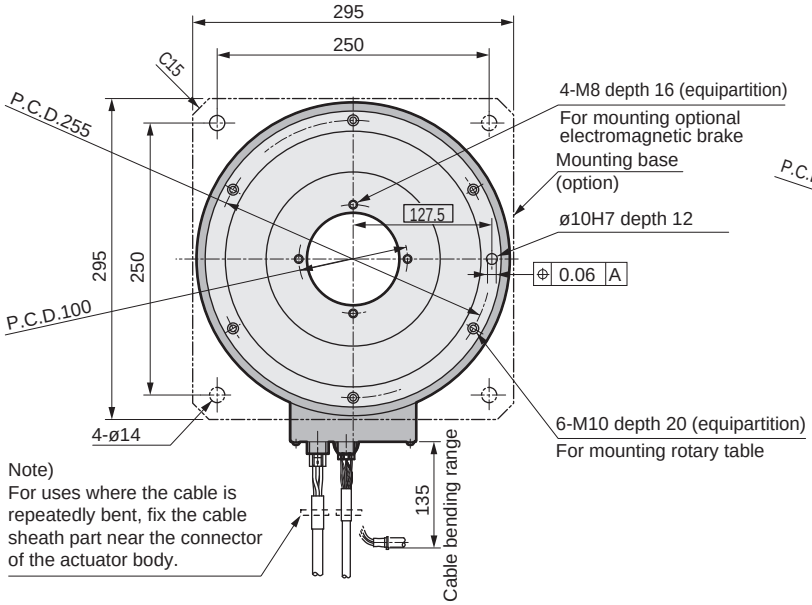




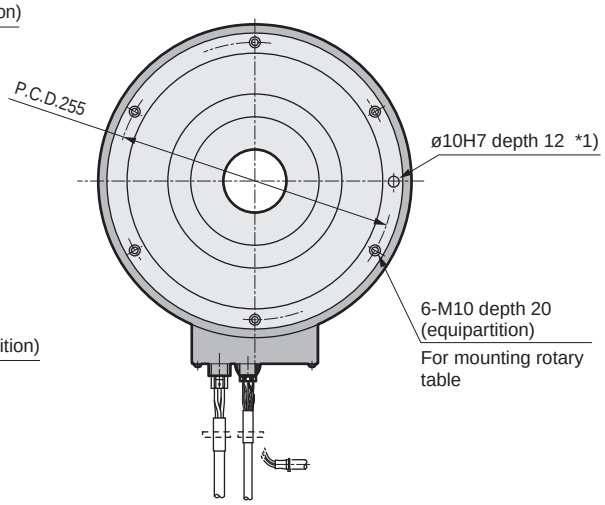
*1) The origin position of the actuator may differ from that shown in the dimensions. The origin offset function allows you to set a desired origin position. The position of the positioning pin hole is the same as that of AX4150T when an electromagnetic brake is mounted.

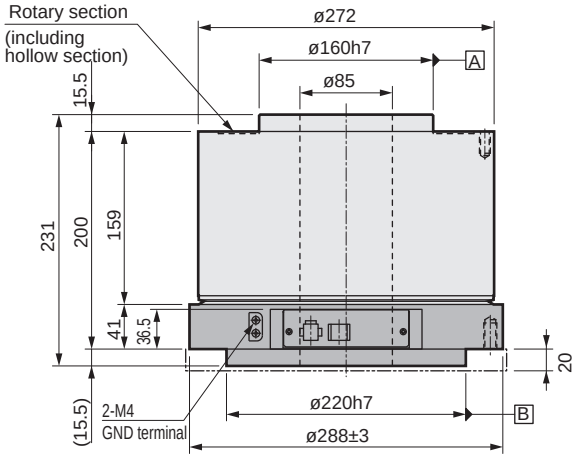
Dimensions

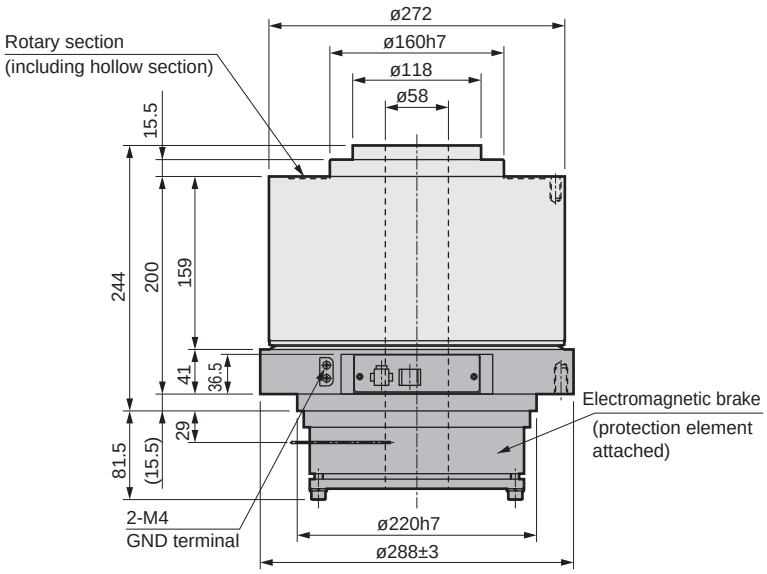
● AX4300T

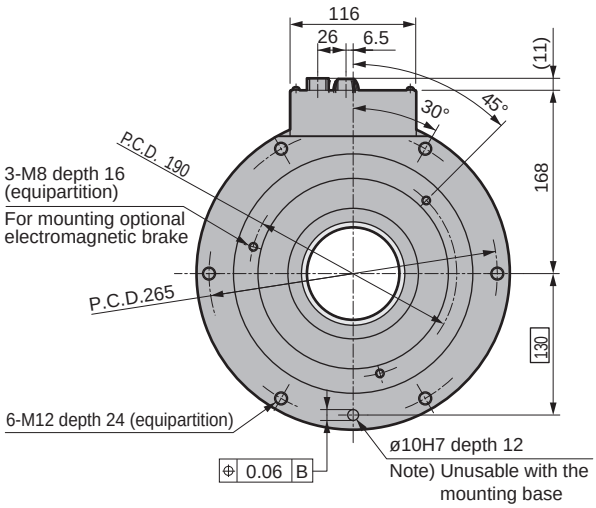


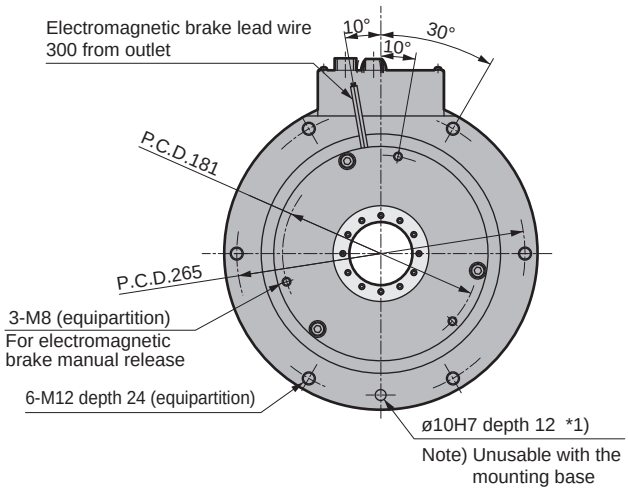
● AX4300T-EB
Electromagnetic brake
For other options, refer to the left figure on the left.







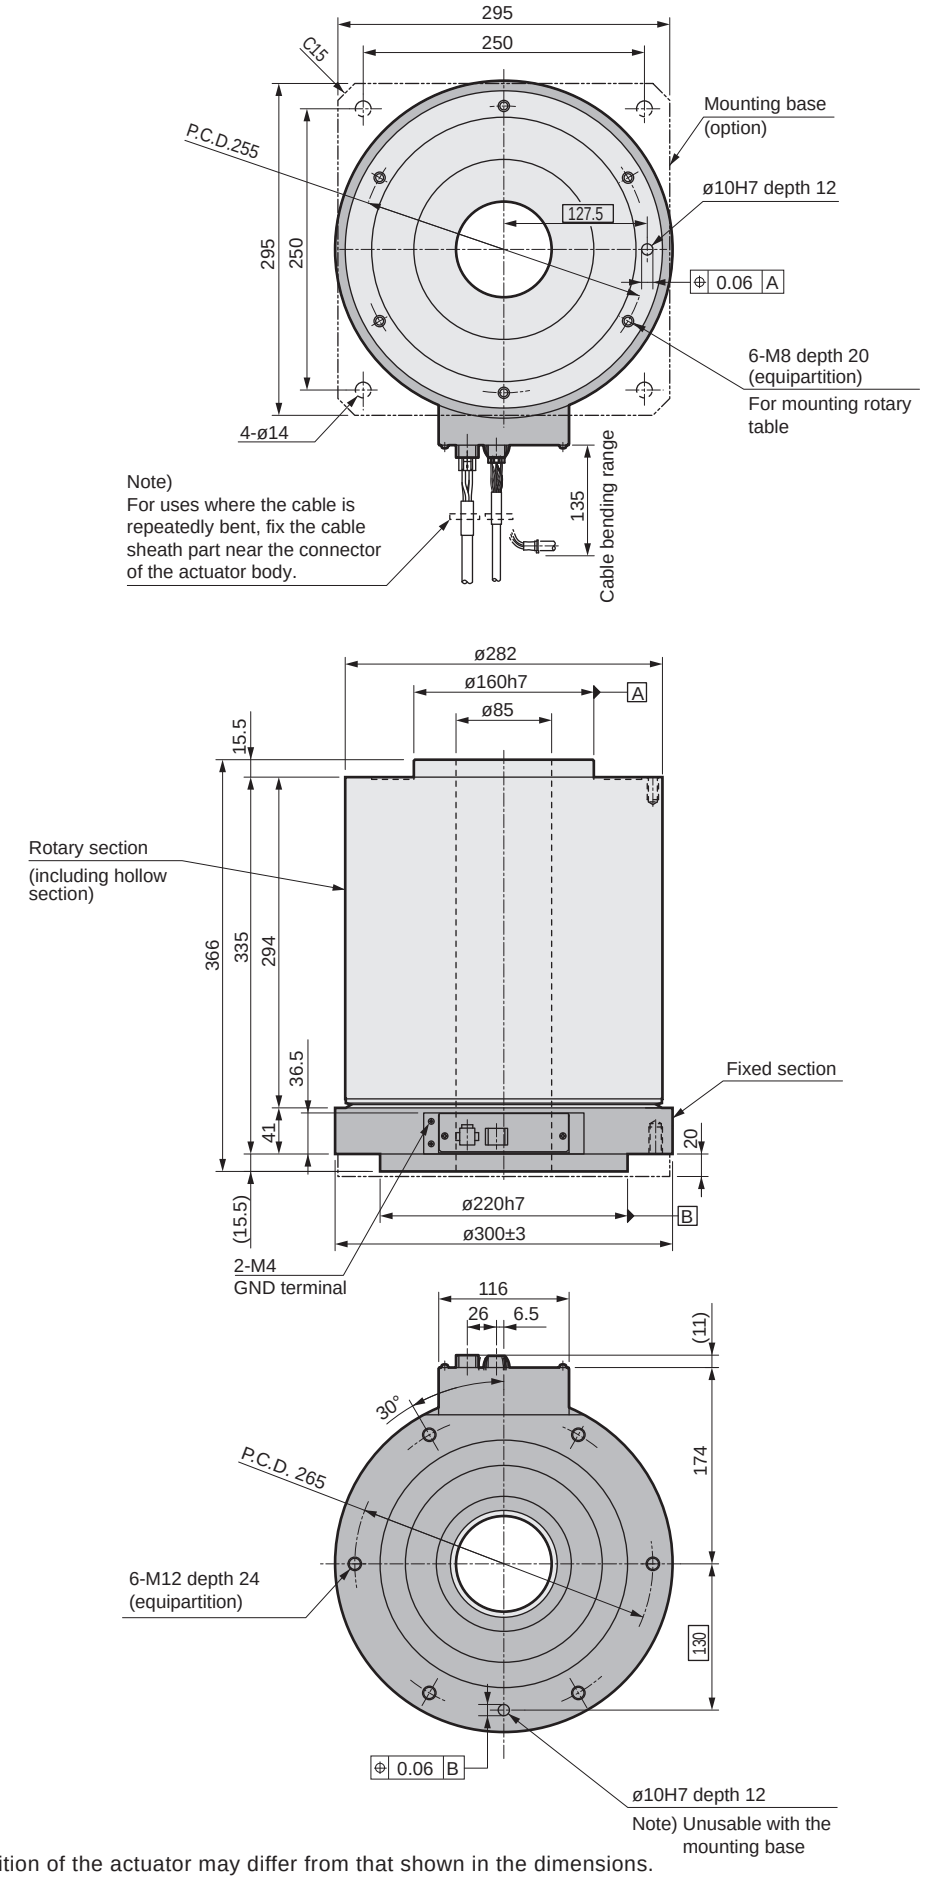




*1) The origin position of the actuator may differ from that shown in the dimensions. The origin offset function allows you to set a desired origin position. The position of the positioning pin hole is the same as that of AX4300T when an electromagnetic brake is mounted.

Dimensions

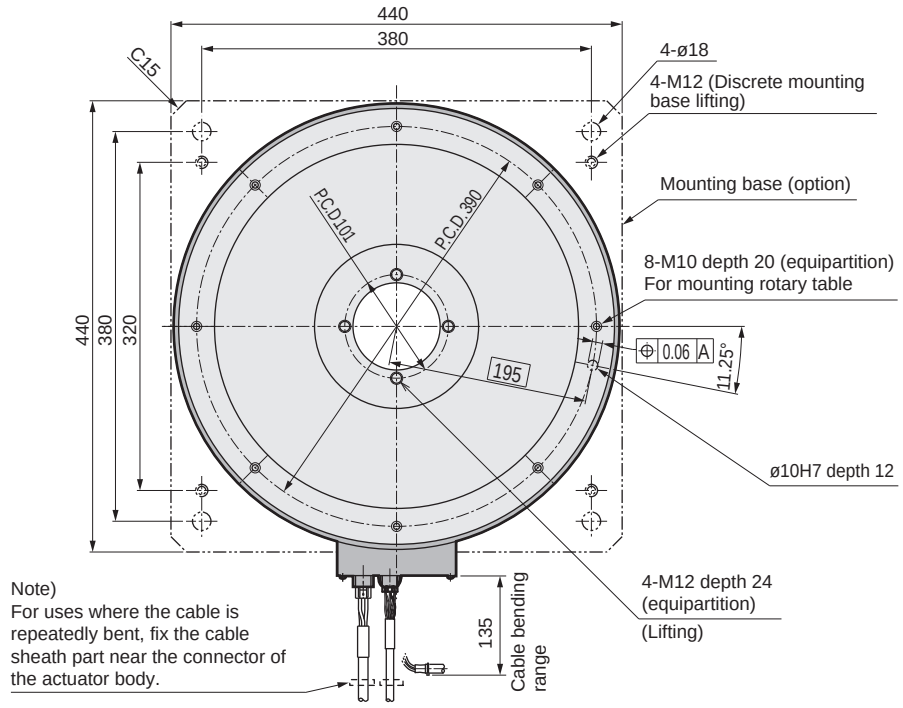
● AX4500T

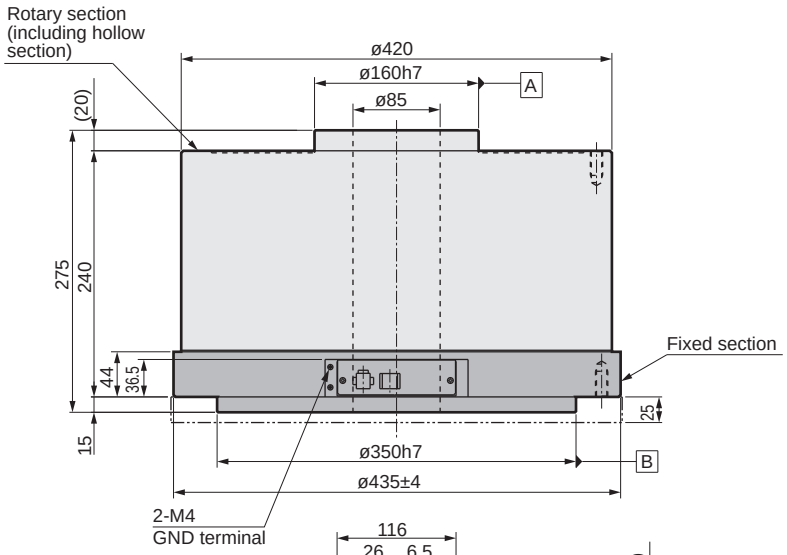


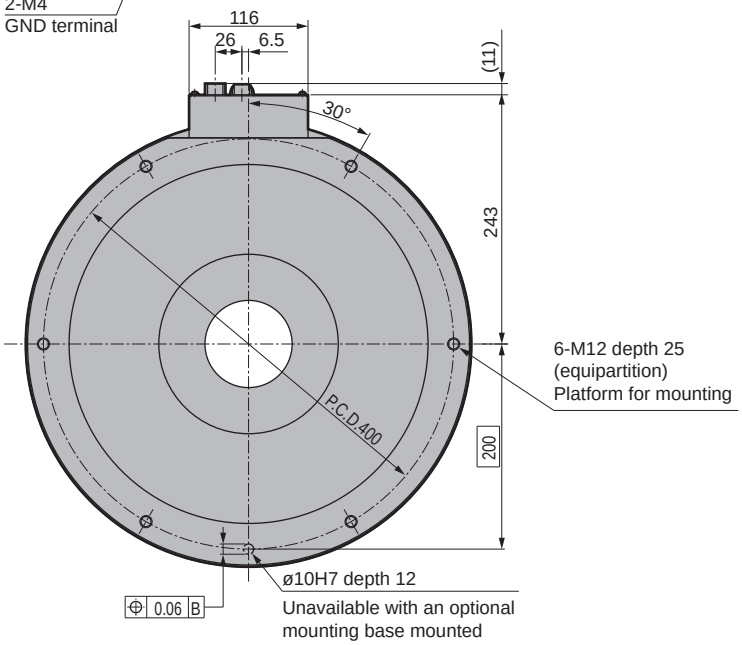
*1) The origin position of the actuator may differ from that shown in the dimensions.
The origin offset function allows you to set a desired origin position.

Dimensions

● AX410WT







*1) The origin position of the actuator may differ from that shown in the dimensions.
The origin offset function allows you to set a desired origin position.

ABSODEX (AX1000T/AX2000T/AX4000T Series)

TS/TH driver

Interface specification: Parallel I/O (NPN), Parallel I/O (PNP)
CC-Link, PROFIBUS-DP, DeviceNet
EtherCAT, EtherNet/IP

c UL us LISTED CE RoHS

Features

- Power supply is divided into main power supply and control power supply
- Wiring method is changed from terminal block to connector
- Smaller/lighter weight (resin body adopted)
- 7-segment LED 2-digit display
- Compatible with encoder output (parallel I/O only)
- Serial communication options available
- Monitoring functions such as position information, alarm status, etc. (U2, U3, U4, U5, and U6 options only)

How to order

• 200 to 230 VAC

AX9000TS - U0

AX9000TH - U0

• 100 to 115 VAC

AX9000TS-J1- U0

Interface specifications
U0: Parallel I/O (NPN)
U1: Parallel I/O (PNP)
U2: CC-Link
U3: PROFIBUS-DP
U4: DeviceNet
U5: EtherCAT
U6: EtherNet/IP

General specifications

Item		Model	
		TS driver AX9000TS	TH driver AX9000TH
Power supply voltage	Main power supply	Three phase, Single phase 200 VAC ±10% to 230 VAC ±10% (*1) 100 VAC ±10% to 115 VAC ±10% (J1 Option) (*2) (*3)	
	Control power	200 VAC ±10% to 230 VAC ±10% 100 VAC ±10% to 115 VAC ±10% (J1 Option) (*2) (*3)	
Power frequency		50/60 Hz	
Rated input current		200 VAC: 1.8 A 100 VAC: 2.4 A (*4)	200 VAC: 5.0 A (*4)
Rated output current		1.9 A	5.0 A
Structure		Driver and controller integrated (open type)	
Operating ambient temperature		0 to 50°C	
Operating ambient humidity		20 to 90% RH (no condensation)	
Storage ambient temperature		−20 to 65°C	
Storage ambient humidity		20 to 90% RH (no condensation)	
Atmosphere		No corrosive gas or dust	
Anti-noise		1,000 V (P-P), pulse width 1 μsec, rising 1 nsec impulse noise test, induction noise (capacitive coupling)	
Vibration resistance		4.9 m/s^2	
Weight		Approx. 1.6 kg	Approx. 2.1 kg
Degree of protection		IP2X (excluding CN4 and CN5)	

*1) For models with maximum torque 75 N·m or more, the calculation of torque limit region is different from the usual when used at single-phase 200 VAC. Contact CKD to determine usability.
*2) If 200 to 230 VAC is connected by mistake, when using power voltage 100 to 115 VAC specifications (-J1 option), the driver internal circuit will be damaged.
*3) For models with maximum torque 75 N·m or more, "-J1" cannot be selected.
*4) For the breaker capacity, OFF to the following.
*5) If the main power is cut off while the actuator is rotating, the rotation may continue due to inertia.
*6) After the main power supply is cut OFF, the motor may rotate by the residual voltage of the driver.

Performance specifications

Item	Description
No. of control axes	1 axis, 540,672 pulses/1 rotation
Angle setting unit	° (degree), pulse, indexing No.
Angle min. setting unit	0.001°, 1 pulse
Speed setting unit	sec, rpm
Speed setting range	0.01 to 100 sec/0.11 to 300 rpm (*1)
Equal divisions	1 to 255
Max. command value	7-digit numeric input ±9,999,999
Timer	0.01 sec to 99.99 sec
Programming language	NC
Programming method	Set the data through RS-232C port with an interactive terminal, PC, etc.
Operation mode	Auto, MDI, jog, single block, servo OFF, pulse train input mode
Coordinates	Absolute, incremental
Acceleration curve	[5 types] Modified sine (MS), modified constant velocity (MC/MC2), modified trapezoid (MT), trapecloid (TR)
Status display	LED display CHARGE: Main power supply POWER: Control power
Operation display	Display with 7-segment LED (2 digits)
Communication interface	RS-232C compliant
I/O signal	Refer to interface specification pages.
Program capacity	Approx. 6,000 characters (256)
Electronic thermal	Overheating protection for actuator

*1) Maximum rotation speed differs depending on the actuator connected.

Breaker capacity

TS driver

Actuator model No.	Driver model No.	Rush current (A)		Breaker capacity
		Single phase 100 V	Single-phase/three-phase 200 V	Rated current (A)
AX2006T	AX9000TS	16 (*1)	56 (*1)	10
AX1022T, AX2012T, AX2018T AX4009T, AX4022T				
AX1045T, AX4045T				
AX1075T, AX4075T		—		

*1) The value of the rush current is a representative value at 115 VAC and 230 VAC.

TH driver

Actuator model No.	Driver model No.	Rush current (A)	Breaker capacity
		Three-phase 200 V	Rated current (A)
AX1150T, AX4150T	AX9000TH	56 (*1)	20
AX1210T, AX4300T			
AX4500T			
AX410WT			

*1) The value of the rush current is a representative value at 230 VAC.

Parallel I/O (NPN)

CN3 Input signal

Pin No.	Signal name	Logic	Determination

CC-Link

Communication specifications

Item	Specifications
Power supply	5 VDC is supplied from the servo amplifier.
CC-Link version	Ver 1.10
Number of occupied stations (Station type)	2 stations (Remote device station)
Remote input points	64 points (including unusable)
Remote output points	64 points (including unusable)
Remote register input/output	Input 8 words/Output 8 words
Communication speed	10M/5M/2.5M/625k/156kbps (Selected by parameter setting)
Connection cable	CC-Link Ver. 1.10 compliant cable (3 core cable with shield)
Transmission format	HDLC compliant
Remote station No.	1 to 63 (Set by a parameter)
Number of connected units	For remote device station only, Max. 32 units/2 stations occupied
Monitor function	Present position within 1 rotation (degree, pulse), position deviation amount, program No., electronic thermal, rotation speed, point table No., torque load factor, acceleration, alarm, parameter, operation mode

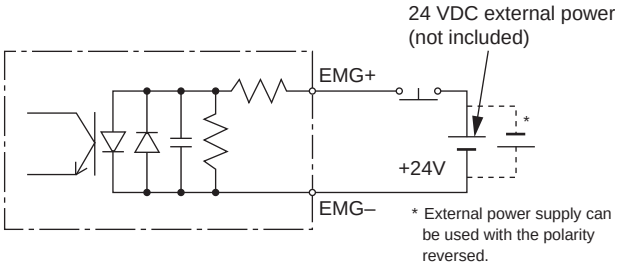
RX(n+3)C to RX(n+3)F	Unusable	

* n is determined by the setting of the station No.

TB3 Input circuit specifications (Machine stops)



* External power supply can be used with the polarity reversed.

Rated voltage 24 V ±10%, rated current 5 mA or less

Safety precautions

- Reserve a sufficient distance between the communication cable and power cable (motor cable, power supply cable, etc.).
- Placing the communication cable and power cable close to each other or bundling these cables makes communication unstable due to noise, possibly resulting in a communication error or retry.
- For details on the installation of the communication cable, refer to the CC-Link installation manuals.

PROFIBUS-DP

Communication specifications

Item	Specifications
Communication protocol	PROFIBUS DP-V0 compliant
I/O data	Input 8 bytes/Output 8 bytes
Communication speed	12M/6M/3M/1.5M/500k /187.5k/93.75k/45.45k /19.2k/9.6kbps (Autobaud rate function)
Connection cable	PROFIBUS compliant cable (2-wire twisted pair cable with shield)
Node address	2 to 125 (Set by a parameter)
Number of connected units	Without repeater: Up to 32 stations for each segment With repeater: Up to 126 stations for each segment
Monitor function	Present position within 1 rotation (degree, pulse), position deviation amount, program No., electronic thermal, rotation speed, point table No., torque load factor, acceleration, alarm, parameter, operation mode

TB3 Input circuit specifications (Machine stops)

Rated voltage 24 V ±10%, rated current 5 mA or less

Safety precautions

- Reserve a sufficient distance between the communication cable and power cable (motor cable, power supply cable, etc.).
- Placing the communication cable and power cable close to each other or bundling these cables makes communication unstable due to noise, possibly resulting in a communication error or retry.
- For details on the installation of the communication cable, refer to the DeviceNet installation manuals.

EtherCAT

Communication specifications

Item	Specifications
Communication protocol	EtherCAT
Communication speed	100 Mbps (fast Ethernet, full duplex)
Process data	Fixed PDO mapping
Max. PDO data length	RxPDO: 40 bytes/TxPDO: 40 bytes
Station arias	0 to 65535 (Set by a parameter)
Connection cable	EtherCAT compliant cable (CAT5e or higher twisted pair cable (double shield with aluminum tape and braid) is recommended.)
Node address	Automatic indexing the master
Monitor function (Output Data)	Present position within 1 rotation (degree, pulse), position deviation amount, program No., electronic thermal, rotation speed, point table No., torque load factor, acceleration, alarm, parameter, operation mode

I/O signal

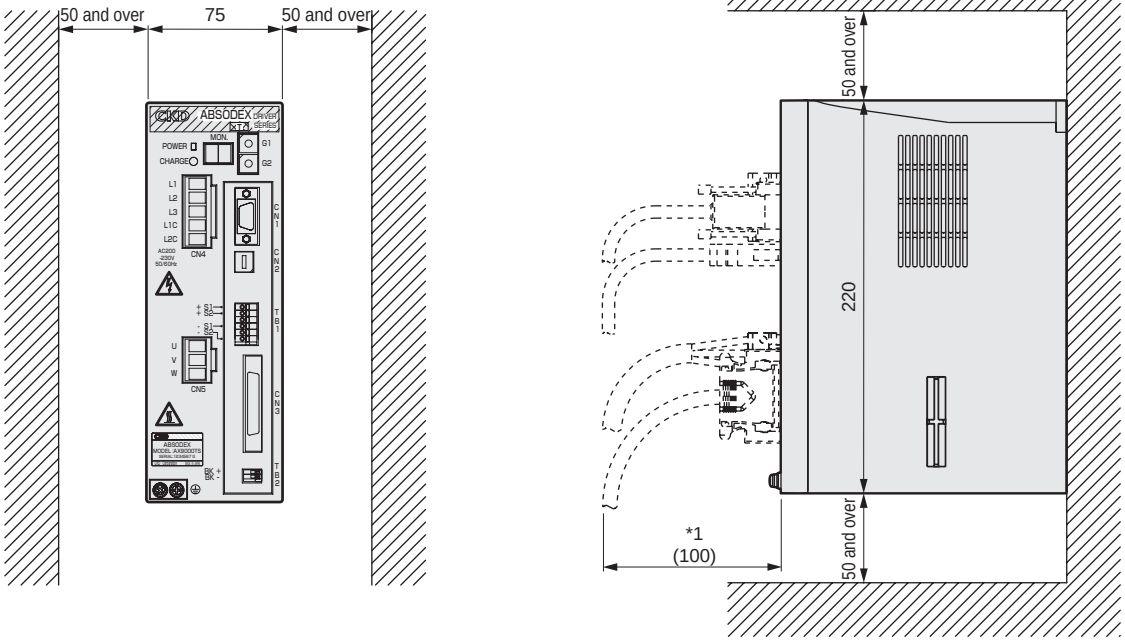
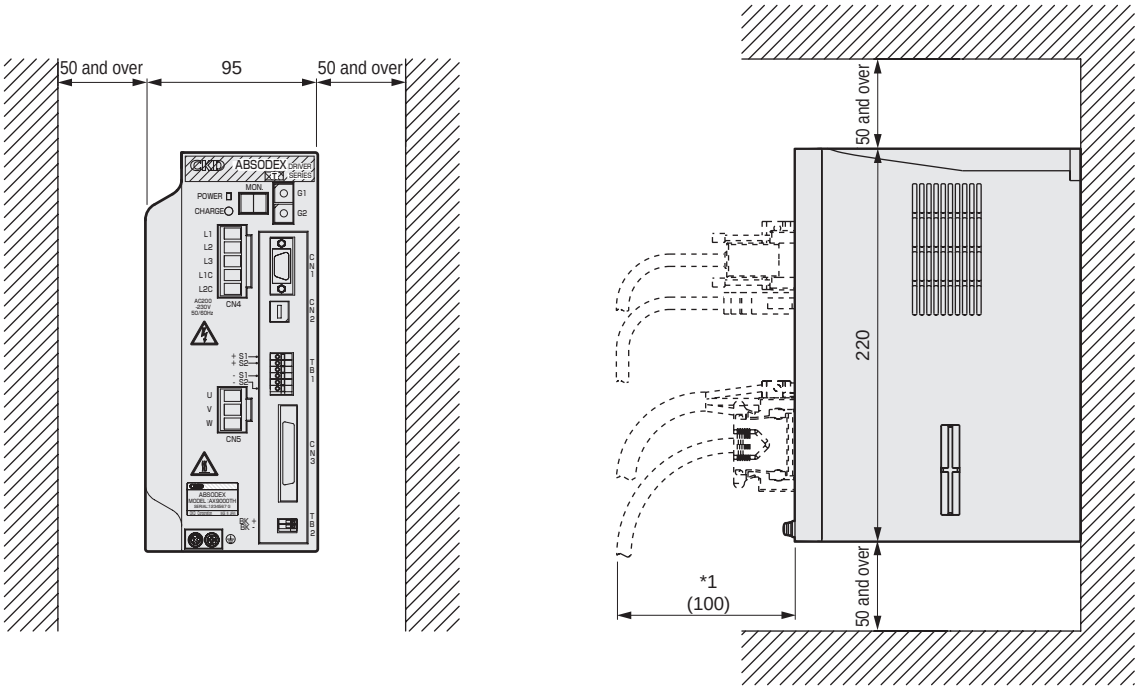
For additional orders of parts, refer to the parts model No. table.

Installation Dimension

● TS driver



● TH driver



*1) Determine the dimension with extra allowance according to a cable you want to use.

Safety precautions

● The ABSODEX driver does not have a dust-proof/waterproof structure.
To prevent dust, water, oil or other substances from entering the driver, provide protection according to the working environment.

● Install the ABSODEX driver away from other devices, walls or other structures by 50 mm or more from the top, bottom and sides. When heat is generated from other drivers or devices, check that the ambient temperature does not exceed 50°C.

Cable Specifications

Cable dimensions

Product name/model No.	Cable's min. bending radius
● AX1000T  Resolver cable AX-CBLR5-DM□□ (*1)	60 mm
	Motor cable AX-CBLM5-DM□□ (*1)	110 mm
● AX2000T, AX4000T  Resolver cable AX-CBLR6-DM□□ (*1)	60 mm
	Motor cable AX-CBLM6-DM□□ (*1)	110 mm

*1) □□ represents the cable length.

Safety precautions

- Connect the correct motor cable and driver by checking the mark tube of the cable and the display of the driver.
- For uses where the cable is repeatedly bent, fix the cable sheath part near the connector of the actuator body.
- For the AX4009T and AX2000T Series, the lead-out cable of the actuator section is not movable. Make sure to fix the cable in the connector section to prevent the cable from moving. Do not pull the lead-out cable to lift the unit or do not apply an excessive force to the cable. Otherwise, malfunction, an alarm, damage of the connector part, or disconnection may result.
- When connecting the cable, fully insert the connector. Also, tighten the connector mounting screws and fix screws securely.
- Do not disconnect, extend, or make other modifications to the cable. Such modifications may cause failure or malfunction.
- For the cable length L, refer to the cable length shown in the How to order.

ABSODEX Handy Terminal

AX0180

● TS/TH driver

RoHS

Features

(1) Programming is easy.
For an equal segment program, you can easily write a program by answering the questions interactively from the handy terminal.
(2) No dedicated power supply is required.
The power is supplied from ABSODEX.
(3) Backup is available.
The programs and parameters can be stored, and programs can be copied.
(4) Available also for conventional models.
With the S/GS/H/GH/WGH type drivers, this product operates in the same way as the conventional handy terminal (AX0170H).

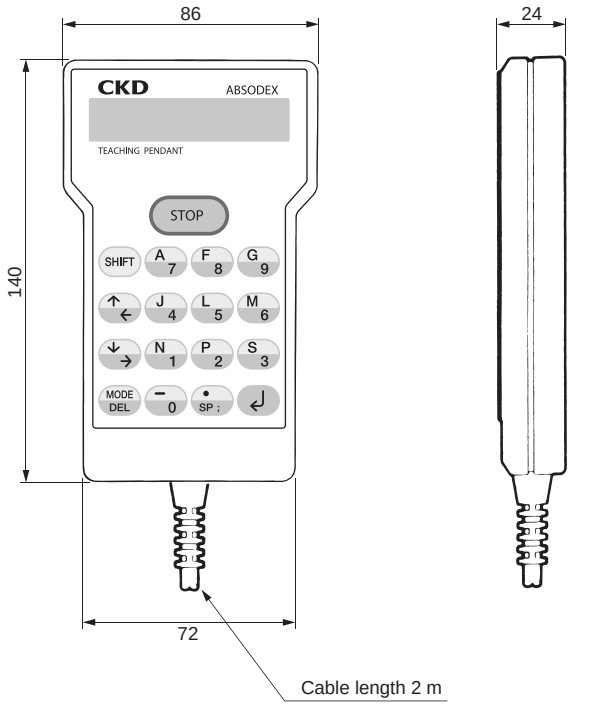
Specifications

Item	AX0180
Operation mode	Edit, Display, Parameter, Operation, and Copy modes
Program capacity	Equal segment or NC program 2,000 characters (One)
Program No.	Equal segment program: Program No. 0 to 999
Display	16 characters × 2 digits (LCD display)
Input keys	17 keys (Stop key: 1, Control key: 5 characters, Number key: 11)
Backup	Super capacitor (about 3 hours)
Power supply	Supplied by the ABSODEX driver
Cable length	2 m
Operating ambient temperature	0 to 50°C
Operating ambient humidity	20 to 90% (no condensation)
Storage ambient temperature	−20 to 80°C
Storage ambient humidity	20 to 90% (no condensation)
Atmosphere	No corrosive gas or dust
Weight	Body only About 140 g

* For the English version, messages are displayed in English. The characters on the operation panel are the same as those of the Japanese version.

Dimensions

● Handy terminal



How to order

Body model No. — Option model No.

AX0180 − **E**

Model No.

Code	Description
Blank	Standard (Japanese version)
E	English version

Handy terminal

Interactive programming

You can easily write a program by inputting values for items as follows:

[Example of input values for a program]

New	Program No. [0 to 999]
Origin return position	1. Origin 2. Indexing
Return direction	1. CW 2. CCW 3. Shortcut
Return speed	[1.0 to 20.0] rpm
Number of segments	[1 to 255]
Travel time	[0.01 to 100] seconds
Rotation direction	1. CW 2. CCW
Stop processing	1. Wait for start 2. Dwell
Brake	1. Using the product 2. Vacant
Delay timer	[0.01 to 99.99] seconds
M Cord	1. M Cord 2. Segmentation position

When you want to...

Make a trial run of ABSODEX! ⇒ Edit mode
12 sample programs are provided. You can try them when making adjustment.

Write an ABSODEX program and store it into ABSODEX! ⇒ Edit mode
You can input programming values and store the program by a simple procedure.

Run a program stored in ABSODEX! ⇒ Operation mode
You can easily start a program by specifying the program No.

Make use of the characteristics of the cam curve! ⇒ Parameter mode
5 types of cam curves are provided. Driving operation taking advantages of the properties is one touch away.

Check the ON/OFF of I/O! ⇒ Display mode
You can display the I/O status.

● Noise filter

Part name	Compatible model No.	Model No.
Noise filter for power supply (Three phase/Single phase 200-230 VAC)	AX Series	AX-NSF-3SUP-EF10-ER-6
Noise filter for power supply (single phase 250 VAC/15A *3)	AX Series	AX-NSF-NF2015A-OD
Ferrite core for motor cable	AX Series	AX-NSF-RC5060ZZ
Clamp filter for power cable (small 2-piece set)	AX6000M Series	AX-NSF-ZCAT2035-0930A
Clamp filter for resolver cable (1 piece each for large and small size)	AX6000M Series	AX-NSF-FC01-SET

(*3) With 250 VAC It can also be used with 24 VDC.
(*4) To make these products compliant with EU standards and CE marking or UL standards, the user is required to provide accessories such as a circuit breaker and FG clamp. For details, refer to the instruction manual or (technical data).

● Other components

Part name	Compatible model No.	Model No.
Power supply connector (CN4)	TS/TH Series	AX-CONNECTOR-PC45
Motor cable connector (CN5)	TS/TH Series	AX-CONNECTOR-PC43
Power supply connector protective cover (CN4)	TS/TH Series	AX-COVER-KGG-PC45
Motor cable connector protective cover (CN5)	TS/TH Series	AX-COVER-KGG-PC43
I/O connector (CN3: For Parallel I/O)	AX Series (-U0, U1)	AX-CONNECTOR-MDR
I/O connector (CN3: For CC-Link)	AX Series (-U2)	AX-CONNECTOR-BLZ5
I/O connector (CN3: For DeviceNet)	AX Series (-U4)	AX-CONNECTOR-MSTB
Protection element for electromagnetic brake	AX Series (-EB)	AX-PARTS-TNR20V121K
Power supply connector set (with open tool)	AX9000MU Series	AX-CONNECTOR-04JFAT-KIT

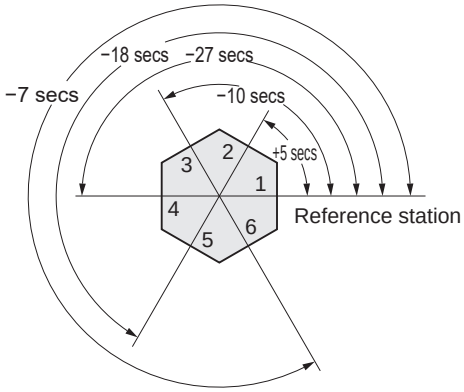
* The parts listed on this page can be purchased from CKD.

Glossary

Index accuracy

The index accuracy of ABSODEX is the difference between the target position set by an NC program and the actual stop position.
This target position is the angle (seconds) from the reference station (origin return position).
As shown in the right figure, the index accuracy is calculated using the maximum value and minimum value of the differences between the target positions and actual stop positions. These positions are expressed with ±x seconds and the width as shown in the figure.
For angle measurement, a high-precision encoder is used.

Index accuracy measurement example



Measurement positions	Measurements
1	0
2	+5 secs
3	−10 secs
4	−27 secs
5	−18 secs
6	−7 secs

Index accuracy ±16 secs

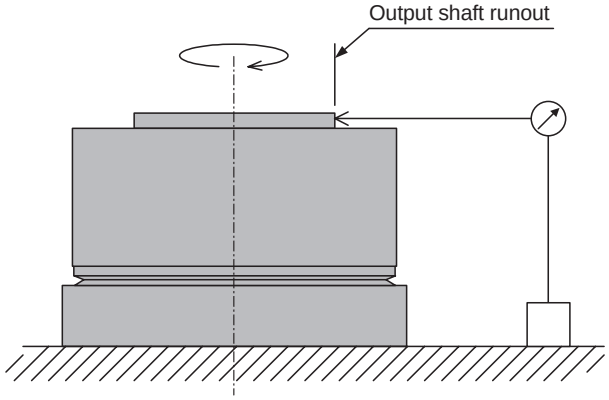
Repeatability

The repeatability expressed by angle (seconds) is the maximum value of angle irregularities of the repeat stop positions when reciprocating operation is performed for a certain target position under the same conditions.
Depending on the accuracy characteristics required by the equipment, it is necessary to differentiate repeat accuracy and index accuracy.

*Angle (secs): A unit (degree/minute/second) for expressing an angle.
1 degree = 60 minutes = 3600 seconds

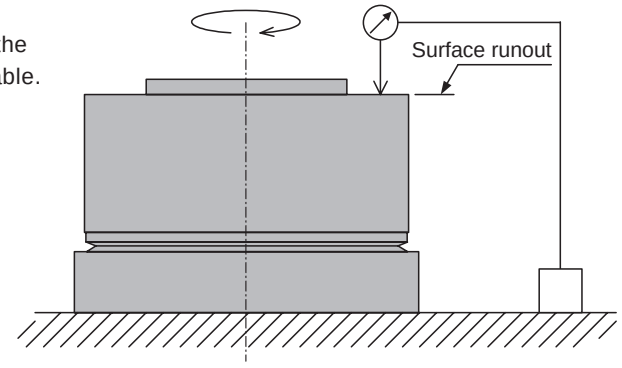
Output shaft runout

Runout accuracy of the inlay side of the table mounting part.



Output shaft surface runout

This the runout accuracy of the table mounting side.
* Measured at the periphery of the screw hole for mounting the table.



Selection guide

Units and symbols of operation conditions	
Load moment of inertia ($kg \cdot m^2$)	J
Travel angle (°)	ψ
Travel time (s)	t_1
Cycle time (s)	t_0
Load friction torque (N·m)	T_F
Work torque (N·m)	T_W
Cam curve	Select from (MS, MC, MT, TR)

1. Moment of inertia of load

Calculate the moment of inertia of load and temporarily select an actuator that can allow the moment of inertia.

2. Rotation speed

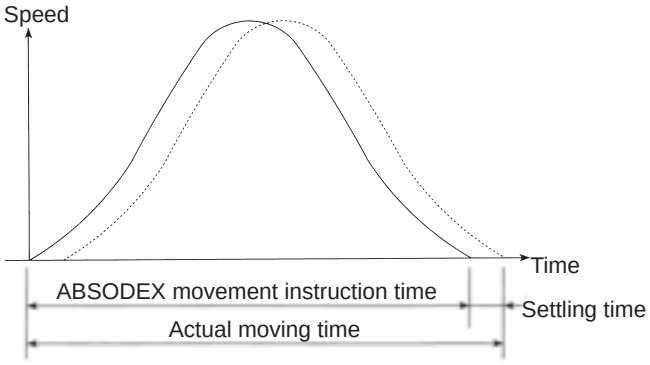
The max. rotation speed Nmax is obtained by the formula:

$$N_{max} = V_m \cdot \frac{\psi}{6 \cdot t_1} \quad \text{(rpm)}$$

Where ψ and t_1 represent travel angle (°) and travel time (s), respectively. V_m is a constant determined by the cam curve.

Check that the value of Nmax dose not exceed the max. rotation speed defined in the actuator specifications.

[Precautions]
The actual travel time is the directive travel time of the ABSODEX plus the stabilization time.



Though the stabilization time depends on working conditions, it is approximately between 0.025 and 0.2 seconds.
For the travel time t_1 in model selection, use the directive travel time of ABSODEX. Also, for setting the travel time with an NC program, use the directive travel time of ABSODEX.

(Note) The friction torque works on the output shaft by the bearing, sliding surface, and other friction. The friction torque can be obtained by the following relational expression:
$Tf = \mu \cdot Ff \cdot Rf$ (N·m)
$Ff = m \cdot g$
where μ: Coefficient of friction

Rolling friction	Sliding friction
μ = 0.03 to 0.05	μ = 0.1 to 0.3

Ff : Force working on the sliding surface, bearing, etc. (N)
Rf : Average friction radius (m)
m : Weight (kg)
g : Gravity acceleration (m/s^2)

3. Load torque

a) The maximum load torque is obtained with the following formula.

$$T_m = [A_m \cdot (J+J_M) \cdot \frac{\psi \cdot \pi}{180 \cdot t_1^2} + T_F + T_W] \cdot fc + T_{MF}$$

b) The effective value of the load torque is obtained with the following formula.

$$T_{rms} = \sqrt{\frac{t_1}{t_0} \cdot [r \cdot A_m \cdot (J+J_M) \cdot \frac{\psi \cdot \pi}{180 \cdot t_1^2} \cdot fc]^2 + (T_F \cdot fc + T_W \cdot fc + T_{MF})^2}$$

The values in the following table are applied to Vm, Am and r.

Cam curve	V_m	A_m	r
MS	1.76	5.53	0.707
MC	1.28	8.01	0.500
MT	2.00	4.89	0.866
TR	2.18	6.17	0.773

J_M, T_{MF}, fc are as follows:
J_M : Output shaft moment of inertia ($kg \cdot m^2$)
T_{MF} : Output shaft friction torque (N·m)
fc : Used factor (For normal use: fc = 1.5)

For the temporarily selected actuator,
Max. load torque < Max. output torque
Effective value of load torque < Continuous output torque
If either of the above conditions is not met, re-calculate the load torque with a larger actuator.

Note) There is a torque limit region where the max. torque decreases at the time of high-speed rotation.
For use in the torque limit region, use the mode selection software to determine the availability of the device.

(Note) The work torque indicates an exterior load, expressed as torque, working as the load on the ABSODEX output shaft.

The work torque Tw is calculated by the following formula:
$T_W = F_W \times R_W$ (N·m)
F_W (N) : Necessary force for work
R_W (m) : Working radius
(Example)
For the body on its side (the output shaft in the horizontal direction), the table, workpiece, jigs and so forth are work torques.

4. Regenerative power

For the AX9000TS/AX9000TH driver, calculate the regenerative power using the following simple formula and determine the availability.

● For AX9000TS drivers

The AX9000TS driver does not have a built-in regenerative resistor. Therefore, check that the value of the regenerative energy calculated by the simple formula below does not exceed energy chargeable with a capacitor (table below).

$$E = \left(\frac{V_m \cdot \psi \cdot \pi}{t_1 \cdot 180} \right)^2 \cdot \frac{(J+J_M)}{2} \text{ (J)}$$

Power supply specification	Processable regenerative energy (J)	Remarks
200 VAC	17.2	Value when the input voltage of the main power is 200 VAC
100 VAC(-J1)	17.2	Value when the input voltage of the main power is 100 VAC

● For AX9000TH drivers

AX9000TH drivers have limitation on the consumption capability of the regenerative power in the driver.
The value is obtained by the following simple formula:

$$W = \left(\frac{V_m \cdot \psi \cdot \pi}{t_1 \cdot 180} \right)^2 \cdot \frac{(J+J_M)}{2 \cdot t_0} \text{ (W)}$$

$W \leq 40$

If this condition is met, re-consider the operation conditions and load conditions.

[Working conditions]
- Table radius : R = 0.4 (m)
- Table weight : Wt = 79 (kg)
- Radius of jig rotation : Re = 0.325 (m)
- Jig weight : Wj = 10 (kg/piece) (Including the workpiece weight)
- Number of jigs : N = 4

[Operating conditions]
- Travel angle : ψ = 90 (°)
- Travel time : t_1 = 0.8 (s)
- Cycle time : t_0 = 4 (s)
- Load friction torque : T_F = 0 (N·m)
- Work torque : T_W = 0 (N·m)
- Output shaft friction torque : T_{MF} (N·m) According to the actuator specifications
- Cam curve : MS (modified sine)

STEP 1 Calculating moment of inertia

a) Table $J_1 = \frac{W_t \times R^2}{2} = \frac{79 \times 0.4^2}{2} = 6.32$ (kg·m²)

b) Jig, workpiece $J_2 = N \times W_j \times R_e^2 = 4 \times 10 \times 0.325^2 = 4.225$ (kg·m²)

c) Sum of moment of inertia $J = J_1 + J_2 = 6.32 + 4.225 = 10.545$ (kg·m²)

STEP 2 Max. rotation speed

$$N_{max} = V_m \cdot \frac{\psi}{6 \cdot t_1} = 1.76 \times \frac{90}{6 \times 0.8} = 33 \text{ (rpm)}$$

Check that N_{max} does not exceed the maximum rotation speed of ABSODEX.

STEP 3 Load torque

At first, perform calculation for the smallest model that allows the moment of inertia of load.

The allowed moment of inertia of AX4300T is 180 (kg·m²), which means that this load is allowed.

Max. load torque

$$T_m = [A_m \cdot (J + J_M) \cdot \frac{\psi \cdot \pi}{180 \cdot t_1^2} + T_F + T_W] \cdot fc + T_{MF}$$

$$= [5.53 \times (10.545 + 0.326) \times \frac{90 \times \pi}{180 \cdot 0.8^2} + 0 + 0] \times 1.5 + 10$$

$$= 231.3 \text{ (N·m)}$$

Effective value of load torque

$$T_{rms} = \sqrt{\frac{t_1}{t_0} \cdot [r \cdot A_m \cdot (J + J_M) \cdot \frac{\psi \cdot \pi}{180 \cdot t_1^2} \cdot fc]^2 + (T_F \cdot fc + T_W \cdot fc + T_{MF})^2}$$

$$T_{rms} = \sqrt{\frac{0.8}{4} \times [0.707 \times 5.53 \times 10.871 \times \frac{90 \times \pi}{180 \cdot 0.8^2} \times 1.5]^2 + (0 \times 1.5 + 0 \times 1.5 + 10)^2}$$

$$= 70.7 \text{ (N·m)}$$

STEP 4 Regenerative power

$$W = \left(\frac{V_m \cdot \psi \cdot \pi}{t_1 \cdot 180}\right)^2 \cdot \frac{(J + J_M)}{2 \cdot t_0}$$

$$= \left(\frac{1.76 \times 90 \times \pi}{0.8 \times 180}\right)^2 \times \frac{10.871}{2 \times 4} = 16.23 \text{ (W)}$$

W ≤ 40 (W)

STEP 5 Selection guide

Consider whether the temporarily selected AX4300T is available.

Sum of the moment of inertia of load	10.545 ≤ 180 (kg·m²)
Max. rotation speed	33 ≤ 100 (rpm)
Max. load torque	231.3 ≤ 300 (N·m)
Effective value of load torque	70.7 ≤ 100 (N·m)
Regenerative power	16.23 ≤ 40 (J)

Under these conditions, AX4300T is available.

[Working conditions]
- Table radius : R = 0.25 (m)
- Table weight : Wt = 10.6 (kg)
- Radius of jig rotation : Re = 0.2 (m)
- Jig weight : Wj = 2 (kg/piece) (Including the workpiece weight)
- Number of jigs : N = 4

[Operating conditions]
- Travel angle : ψ = 90 (°)
- Travel time : t_1 = 0.5 (s)
- Cycle time : t_0 = 4 (s)
- Load friction torque : T_F = 0 (N·m)
- Work torque : T_W = 0 (N·m)
- Output shaft friction torque : T_{MF} (N·m) According to the actuator specifications
- Cam curve : MS (modified sine)

STEP 1 Calculating moment of inertia

a) Table $J_1 = \frac{W_t \times R^2}{2} = \frac{10.6 \times 0.25^2}{2} = 0.331$ (kg·m²)

b) Jig, workpiece $J_2 = N \times W_j \times R_e^2 = 4 \times 2 \times 0.2^2 = 0.32$ (kg·m²)

c) Sum of moment of inertia $J = J_1 + J_2 = 0.331 + 0.32 = 0.651$ (kg·m²)

STEP 2 Max. rotation speed

$$N_{max} = V_m \cdot \frac{\psi}{6 \cdot t_1} = 1.76 \times \frac{90}{6 \times 0.5} = 52.8 \quad \text{(rpm)}$$

Check that N_{max} does not exceed the maximum rotation speed of ABSODEX.

STEP 3 Load torque

At first, perform calculation for the smallest model that allows the moment of inertia of load.

The allowed moment of inertia of AX7045X is 0.90 (kg·m²), which means that this load is allowed.

Max. load torque

$$T_m = [A_m \cdot (J+J_M) \cdot \frac{\psi \cdot \pi}{180 \cdot t_1^2} + T_F + T_W] \cdot fc + T_{MF}$$

$$= [5.53 \times (0.651 + 0.0254) \times \frac{90 \times \pi}{180 \cdot 0.5^2} + 0 + 0] \times 1.5 + 2.5$$

$$= 37.8 \text{ (N·m)}$$

Effective value of load torque

$$T_{rms} = \sqrt{\frac{t_1}{t_0} \cdot [r \cdot A_m \cdot (J + J_M) \cdot \frac{\psi \cdot \pi}{180 \cdot t_1^2} \cdot fc]^2 + (T_F \cdot fc + T_W \cdot fc + T_{MF})^2}$$

$$T_{rms} = \sqrt{\frac{0.5}{4} \times [0.707 \times 5.53 \times 0.6764 \times \frac{90 \times \pi}{180 \cdot 0.5^2} \times 1.5]^2 + (0 \times 1.5 + 0 \times 1.5 + 2.5)^2}$$

$$= 9.2 \text{ (N·m)}$$

STEP 4 Regenerative power

$$E = \left(\frac{V_m \cdot \psi \cdot \pi}{t_1 \cdot 180}\right)^2 \cdot \frac{(J+J_M)}{2} \text{ (J)}$$

$$= \left(\frac{1.76 \times 90 \times \pi}{0.5 \times 180}\right)^2 \times \frac{0.6764}{2} = 10.3 \text{ (J)}$$

$E \leq 17.2$ (J)

STEP 5 Selection guide

Consider whether the temporarily selected AX7045X is available.

Sum of the moment of inertia of load	0.651 ≤ 0.90 (kg·m²)
Max. rotation speed	52.8 ≤ 240 (rpm)
Max. load torque	37.8 ≤ 45 (N·m)
Effective value of load torque	9.2 ≤ 15 (N·m)
Regenerative power	10.3 ≤ 17.2 (J)

With these conditions, AX7045X is available.

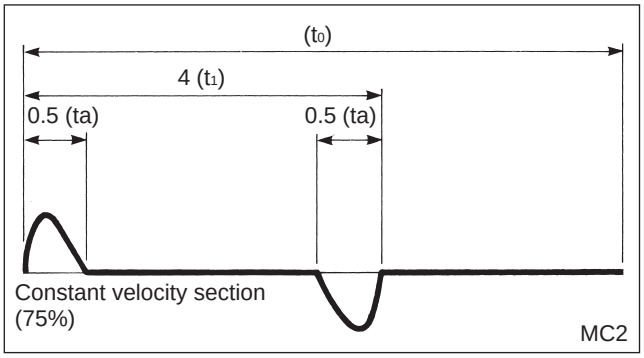
For model selection for "MC2 curve"

What is MC2 curve?

The MC2 curve is a cam curve for which the constant velocity interval can be freely set by setting the acceleration/deceleration time while there is a constant velocity interval during travel, as is the case with an MC (modified constant) curve.
For an MC (generic term: MCV50) curve, the percentage of the constant velocity interval is 50%.

Note: The setting of the acceleration/deceleration time is 1/2 or less of the travel time. When the setting of the acceleration/deceleration time exceeds 1/2 of the travel time, the cam curve is automatically changed to the MS (modified sine) curve.

The example diagram shows the velocity pattern when the percentage of the constant velocity interval is 75% by setting the acceleration/deceleration time (ta) to 0.5 seconds for the 4 seconds of the travel time (t_1).



Selection method

For the MC2 curve, the formula below is used to select a model.

Travel angle	:	ψ (°)
Cycle time	:	t_0 (s)
Travel time	:	t_1 (s)
Acceleration/deceleration time	:	ta (s)
Load moment of inertia	:	J (kg·m^2)
Output shaft moment of inertia	:	J_M (kg·m^2)
Friction torque	:	Tf (N·m)
Work torque	:	T_w (N·m)
Output shaft friction torque	:	T_{MF} (N·m)

Max. rotation speed: Nmax (rpm)

$$Nmax = \frac{\psi}{6\,(t_1 - 0.863ta)}$$

Load torque (max. value): T_m (N·m)

$$Tm = \left[5.53\,(J+J_M)\cdot\frac{\psi\cdot\left(1-\frac{t_1-2ta}{t_1-0.863ta}\right)\cdot\pi}{720\cdot ta^2} + Tf+T_w\right]\cdot fc+T_{MF}$$

Load torque (effective value): Trms (N·m)

$$Trms = \sqrt{\frac{2ta}{t_0}\cdot\left[3.91\,(J+J_M)\cdot\frac{\psi\cdot\left(1-\frac{t_1-2ta}{t_1-0.863ta}\right)\cdot\pi}{720\cdot ta^2}\cdot fc\right]^2+[(Tf+T_w)\cdot fc+T_{MF}]^2}$$

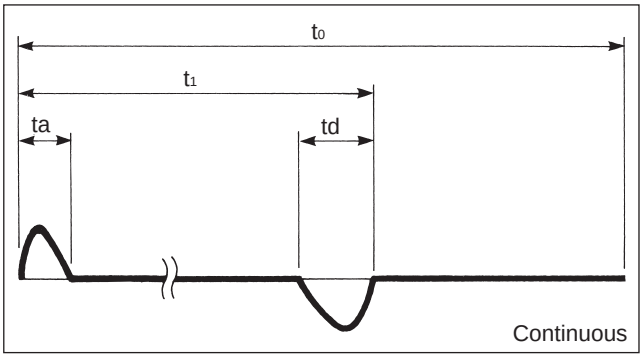
For model selection for "Continuous rotation"

What is continuous rotation?

The continuous rotation has the following functions.

1. Continuous rotation : Rotation continues at a constant rotation speed until the continuous rotation stop input is input.
2. Stop at equal segment position : With the equal segment specified, the device stops at the equal segment position by a continuous rotation stop input.

The example diagram shows the velocity pattern where the motor is accelerated at the acceleration time: ta up to the set rotation speed: N, and then stopped, by a continuous rotation stop input, at the deceleration time: td.



Selection method

For the continuous rotation, the formula below is used to select a model.

Rotation speed	:	N (rpm)
Cycle time	:	t_0 (s)
Acceleration time	:	ta (s)
Deceleration time	:	td (s)
Load moment of inertia	:	J (kg·m^2)
Output shaft moment of inertia	:	J_M (kg·m^2)
Friction torque	:	Tf (N·m)
Work torque	:	T_w (N·m)
Output shaft friction torque	:	T_{MF} (N·m)

Max. rotation speed: Nmax (rpm) (*1)

Nmax = N

Load torque (max. value): Tm (N·m)

$$Tm = \left[5.53\,(J+J_M)\cdot\frac{6.82N\cdot ta\cdot\pi}{720\cdot ta^2}+Tf+T_w\right]\cdot fc+T_{MF}$$

Load torque (effective value): Trms (N·m)

$$Trms = \sqrt{\frac{2ta}{t_0}\cdot\left[3.91\,(J+J_M)\cdot\frac{6.82N\cdot ta\cdot\pi}{720\cdot ta^2}\cdot fc\right]^2+[(Tf+T_w)\cdot fc+T_{MF}]^2}$$

The formula above is applicable when ta ≤ td. When ta > td, replace ta with td for perform selection.

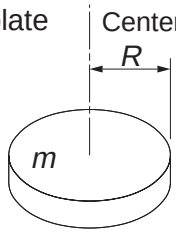
*1) At the time of continuous rotation, the maximum rotation speed is limited. Use the device according to the actuator specifications.

Formulas of moment of inertia

(m : Weight of object (kg))

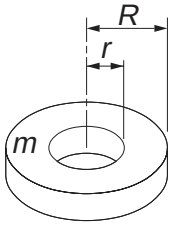
● A When rotation center is the same shaft

1. Circular plate (cylinder)



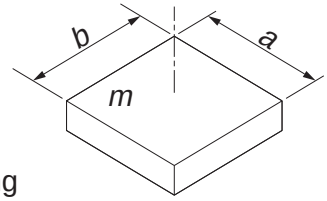
$$J = \frac{mR^2}{2}$$

2. Hollow circular plate (hollow cylinder)



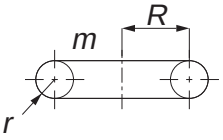
$$J = \frac{m\,(R^2 + r^2)}{2}$$

3. Cuboid



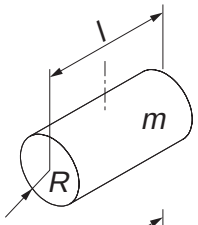
$$J = \frac{m\,(a^2 + b^2)}{12}$$

4. Ring



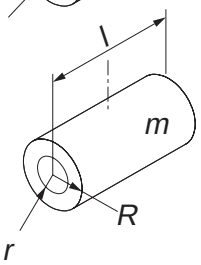
$$J = \frac{m\,(4R^2 + 3r^2)}{4}$$

5. Cylinder



$$J = \frac{m\,(3R^2 + l^2)}{12}$$

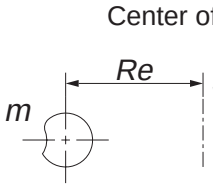
6. Hollow cylinder



$$J = \frac{m\,(R^2 + r^2 + l^2/3)}{4}$$

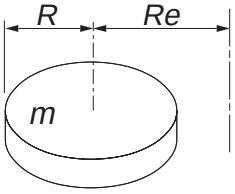
● B When rotation center shafts differ

1. Any shape (if sufficiently small)



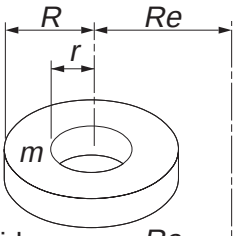
$$J = mRe^2$$

2. Circular plate (cylinder)



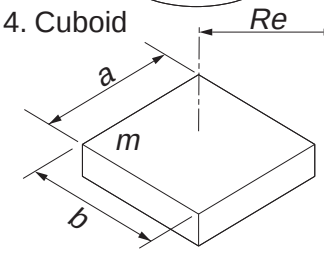
$$J = m\left(\frac{R^2}{2} + Re^2\right)$$

3. Hollow circular plate (hollow cylinder)



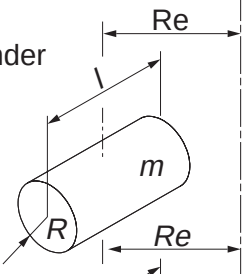
$$J = m\left(\frac{R^2 + r^2}{2} + Re^2\right)$$

4. Cuboid



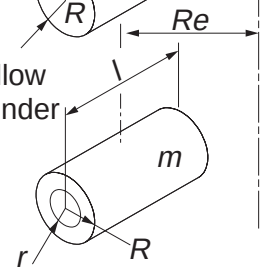
$$J = m\left(\frac{a^2 + b^2}{12} + Re^2\right)$$

5. Cylinder



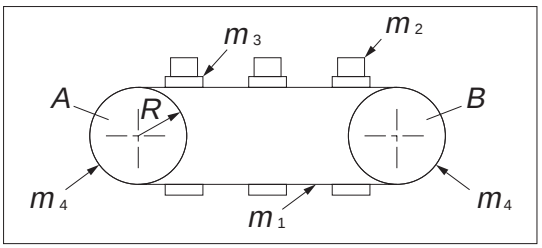
$$J = m\left(\frac{3R^2 + l^2}{12} + Re^2\right)$$

6. Hollow cylinder



$$J = m\left(\frac{R^2 + r^2 + l^2/3}{4} + Re^2\right)$$

● For conveyor



m_1 : Chain weight
m_2 : Workpiece total weight
m_3 : Jig (pallet) total weight
m_4 : Sprocket A (drive) + B total weight
R : Drive side sprocket radius

$$J = (m_1 + m_2 + m_3 + \frac{m_4}{2}) \cdot R^2$$

(Fig. 3) Installation position: Vertical

■ Other load conditions

Installation position
1. Horizontal (Fig.2) 2. Vertical (Fig. 3)

Extemal job
1. None 2. Available
(Note) Eccentric load caused by gravity from vertical installation, extemal load caused by caulking work

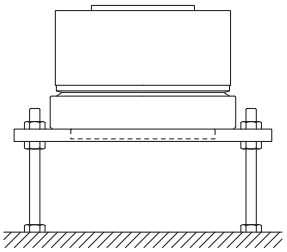
Dial plate support form bottom
1. None 2. Available
Coefficient of friction μ
Work radius Rf (mm)

Device rigidity
1. High 2. Low (Note)
(Note) When using a spline, when unit cannot be fixed directly onto the device (Fig. 4), when there is a mechanism such as a chuck on the table.

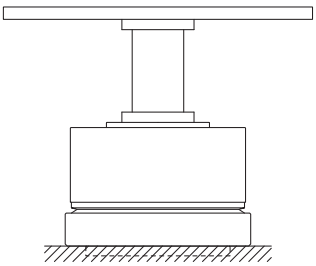
Extension with table shaft
1. None 2. Available (Fig. 5)

Actuator movement
1. None 2. Available
(Note) When actuator is mounted on X-Y table or vertical mechanism, etc., and mounted actuator moves

(Note) If 2 is selected for any item, contact CKD.



(Fig. 4) Installation rigidity: Low



(Fig. 5) Extension with shaft

(Note) Attach system outline and reference drawings so that the optimal model can be selected.

Check below when selecting AX6001MU/AX6003MU.

■ Use conditions, environmental conditions (Optional)

Actuator ambient temperature (°C)	
Motor cable length (m)	
Driver ambient temperature (°C)	
24 VDC power supply cable length (m)	
24 VDC power supply coil diameter (mm²)	
24 VDC power supply voltage accuracy (%)	
24 VDC line point of contact quantity (pc.)	
24 VDC line point of contact resistance (mΩ / pc.)	

* You can do a more rigorous selection by filling in this field.
* With a power supply cable 1.25 mm² or more, please use one as short (recommended length 1 m or less) as possible.
* If the output voltage is low in a power supply with voltage adjustment, please adjust it to 24 V and use it.

MEMO

Safety Precautions

Always read this section before use.

When designing equipment using ABSODEX, the manufacturer is obligated to ensure that the safety of the mechanism and the system that runs by the electrical controls are secured.
It is important to select, use, handle and maintain the product appropriately to ensure that the CKD product is used safely. Observe warnings and precautions to ensure device safety.
Check that device safety is ensured, and manufacture a safe device.

WARNING

1 This product is designed and manufactured as a general industrial machine part.
It must be handled by an operator having sufficient knowledge and experience.

2 Use the product within specifications range.

This product must be used within its stated specifications. In addition, never modify or additionally machine this product.
This product is intended for use as a device or part for general-purpose industrial machinery. It is not intended for use outdoors or for use under the following conditions or environment.
(Note that this product can be used when CKD is consulted prior to use and the customer consents to CKD product specifications. The customer must provide safety measures to avoid risks in the event of problems.)

❶ Use for applications requiring safety, including nuclear energy, railways, aircraft, marine vessels, vehicles, medical devices, devices or applications in contact with beverages or foodstuffs, amusement devices, emergency operation (cutoff, release, etc.) circuits, press machines, brake circuits, or safety devices or applications.
❷ Use for applications where life or assets could be adversely affected, and special safety measures are required.

3 Observe organization standards and regulations, etc., related to the safety of the device design.

4 Do not remove devices before confirming safety.

❶ Inspect and service the machine and devices after confirming the safety of the system by for instance turning off the nearby devices and connected devices.
❷ Note that there may be hot or charged sections even after operation is stopped. Be careful when handling devices at the time of inspection and servicing.
❸ When inspecting or servicing the device, turn off the device and the power to the facility. Discharge any compressed air from the system, and pay close attention to possible water leakage and leakage of electricity during inspection and servicing.

5 Observe the instructions and cautions of each product to prevent accidents.

❶ When the device is off, do not turn the output shaft of the actuator to a speed exceeding 30 rpm.
The power generation of the actuator may damage the driver or may cause electrical shock.
❷ Servo off (including emergency stop and alarm) or brake off with rotational force being applied, e.g. by gravity, may cause the output shaft to rotate due to turning force.
Operate the actuator in the balanced condition so that no rotational force is applied for these operations or after safety is confirmed.
❸ Keep hands away from the output shaft, as sudden motion may take place during gain adjustments or trial run. When operating the actuator from a position in which motion cannot be confirmed, make sure that safety is assured when the output shift is rotated beforehand.
❹ The brake built-in actuators do not completely clamp the output shaft in all cases.
The built-in brake alone is not enough to secure safety when performing maintenance in applications in which the output axis may rotate due to an unbalanced load, or when the machine is stopped for an extended period of time. Be sure that the equipment is in a balanced state or provide a mechanical locking mechanism.
❺ It may take several seconds to stop in an emergency depending on rotation speed and load.

6 Observe the following precautions to prevent electric shock.

❶ The power terminals on the front side of the driver and the motor cable connection terminals are high voltage parts. For the terminal blocks, make sure to install the attached terminal cover. Do not touch the actuator and the driver while the power supply is on.
Immediately after the power is turned off, high voltage is applied, so also do not touch them for 5 minutes or more, until the electrical charge accumulated in the capacitor inside the driver is released.
❷ For operations with the side cover removed, such as maintenance and inspection or change of the switch inside the driver, make sure to turn off the actuator and release the electrical charge for 5 minutes or more before work; otherwise, an electric shock may occur from the high-voltage device.
❸ Do not attach or remove any connectors with the power supply on. Doing so may cause malfunction, failure, or electric shock.

7 Before restarting the machine and devices, confirm that measures are taken to prevent the loaded objects from being removed.

8 Install an overcurrent protective device.

The wiring to the driver should be in accordance with JIS B 9960-1:2019 (IEC 60204-1:2016) Safety of Machinery - Electrical Equipment of Machines - Part 1: General Requirements. Install an overcurrent protector (a circuit breaker or circuit protector for wiring) on the main power, control power, and I/O power.

(Reference: JIS B 9960-1 7.2.1 General description)
If there is a possibility the circuit current may exceed the rated value of the component or the allowable current of the conductor, an overcurrent protection must be provided. The details of the ratings or set values to be selected shall be provided in 7.2.10.

9 Observe the precautions on the following pages to prevent accidents.

■ The precautions are ranked as "DANGER", "WARNING" and "CAUTION" in this section.

⚠ DANGER: When a dangerous situation may occur if handling is mistaken leading to fatal or serious injuries, and when there is a high degree of emergency to a warning.

⚠ WARNING: If handled incorrectly, a dangerous situation may occur, resulting in death or serious injury.

⚠ CAUTION: When a dangerous situation may occur if handling is mistaken leading to minor injuries or physical damage.

Note that some items described as "CAUTION" may lead to serious results depending on the situation. Every item provides important information and must be observed.

Warranty

1 Warranty period

The product specified herein is warranted for one (1) year from the date of delivery to the location specified by the customer.

2 Warranty coverage

If the product specified herein fails for reasons attributable to CKD within the warranty period specified above, CKD will promptly provide a replacement for the faulty product or a part thereof or repair the faulty product at one of CKD's facilities free of charge.
However, following failures are excluded from this warranty:

1) Failure caused by handling or use of the product under conditions and in environments not conforming to those stated in the catalog, the Specifications, or the Instruction Manual.
2) Failure caused by use of the product exceeding its durability (cycles, distance, time, etc.) or caused by consumable parts.
3) Failure not caused by the product.
4) Failure caused by use not intended for the product.
5) Failure caused by modifications/alterations or repairs not carried out by CKD.
6) Failure caused by reasons unforeseen at the level of technology available at the time of delivery.
7) Failure caused by acts of nature and disasters beyond control of CKD.

The warranty stated herein covers only the delivered product itself. Any loss or damage induced by failure of the delivered product is excluded from this warranty.
Note: For details on the durability and consumable parts, contact your nearest CKD sales office.

3 Compatibility confirmation

The customer is responsible for confirming the compatibility of CKD products with the customer's systems, machines and equipment.

1 The actuators and drivers are not waterproof. Provide waterproofing when using them where they may come in contact with water or oil.

2 If chips or dusts adhere to the actuator or driver, it may cause leakage of electricity or failure. Check that these do not come in contact with the product.

3 Repeatedly turning power ON and OFF may cause damage to the elements inside the driver.

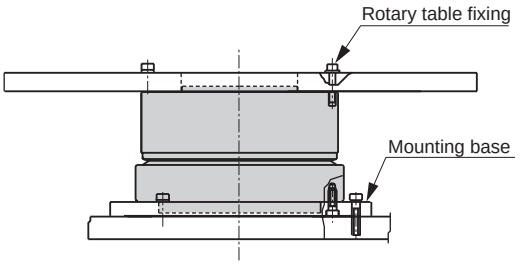
4 From the servo-ON state (holding state), when power is turned OFF or servo-OFF, the output axis may move from the holding position without external force being applied.

5 The optional electromagnetic brake is provided to increase the holding rigidity when stopping the output shaft. Do not use it to brake or stop the rotating output shaft.

6 Actuators and drivers do not guarantee rustproofing. Give careful consideration to storage, installation, and environment.

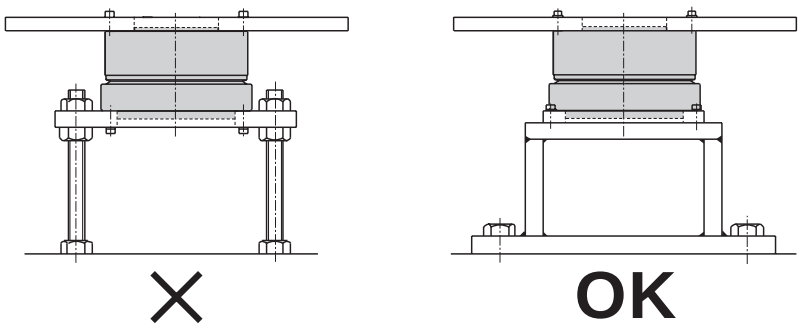
7 Equipment with ABSODEX products installed should have sufficient rigidity to realize full ABSODEX performance. If the load equipment or frame's mechanical unique vibration is relatively low (approx. 200 to 300 Hz or less depending on the equipment), resonance could occur in the ABSODEX product and load equipment or frame. Secure the rotary table and main unit installation bolts, and ensure sufficient rigidity without loosening, etc. [Fig. 1]

[Fig. 1] Actuator installation



Gain must be adjusted based on load table size, etc. Even when the ABSODEX product is not directly installed, it should be installed on a frame having the highest rigidity possible. [Fig. 2]

[Fig. 2] Actuator attachment



8 When extending the output shaft, refer to the references given in Table 1 for the extended shaft's diameter and length. In addition, add dummy inertia by using Fig. 3 as a reference.

[Table 1] Extended output shaft's diameter guideline

Max. torque	Shaft extension (mm) TS/TH/XS				
[N·m]	50	100	200	300	500
6	ø35	ø40	ø46	ø50	ø60
9, 12	ø40	ø46	ø55	ø60	ø70
18, 22	ø45	ø55	ø65	ø70	ø80
45	ø55	ø65	ø75	ø85	ø95
75	ø62	ø75	ø90	ø95	ø110
150	ø75	ø90	ø110	ø115	ø130
210	ø80	ø95	ø115	ø125	ø140
300	ø90	ø105	ø125	ø140	ø155
500	ø100	ø120	ø145	ø160	ø180
1000	ø120	ø140	ø170	ø185	ø210

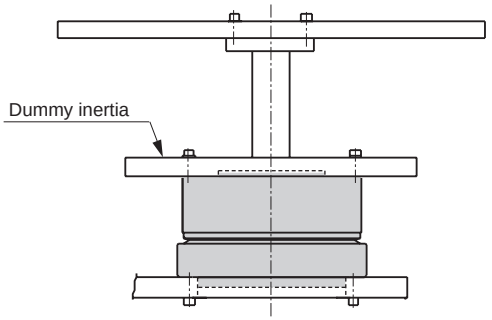
Max. torque	Shaft extension (mm) MU	
[N·m]	50	100
1.2	ø35	ø40
3	ø35	ø40

Note) The figures in the above table are extended output shaft's diameter references for steel materials (solid shafts).
Contact CKD for references for other materials and hollow shafts.

9 If sufficient rigidity cannot be attained, machine resonance is suppressed to some degree by installing dummy inertia as close to the actuator as possible. Examples of adding dummy inertia are shown below.

- As a reference, dummy inertia is [load inertia] × (0.2 to 1). [Fig. 3]

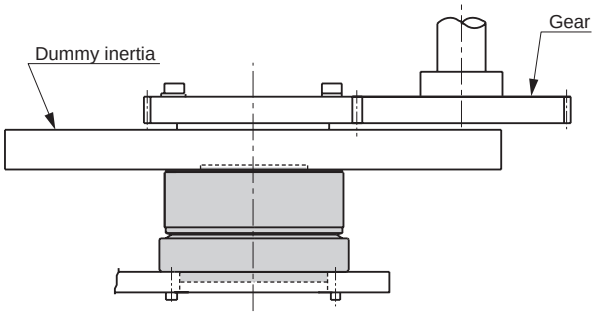
[Fig. 3] Dummy inertia installation example 1



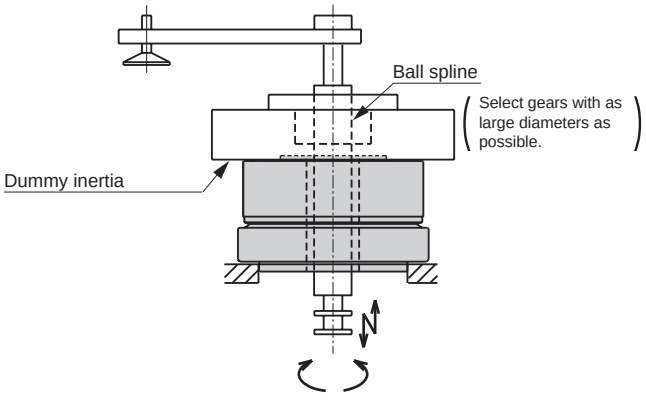
- When coupling with a belt, gears, or spline, or when joining with a key, dummy inertia should be [load inertia] × (0.5 to 2).
- If speed changes with belts or gears, use load inertia as the actuator output shaft conversion value, and install dummy inertia on the actuator. [Fig. 4] [Fig. 5]

(CAUTION) Install dummy inertia as large as possible within the actuator's capacity. (Use steel that has a large specific gravity.)

[Fig. 4] Dummy inertia installation example 2



[Fig. 5] Dummy inertia installation example 3



10 A resolver (magnetic position detector) is built into the ABSODEX product.
Do not place strong magnetic fields such as rare earth magnets near the actuator. Do not pass high-current wiring through the hollow hole. If you do, the full performance may not be achieved, and malfunction or fault may result.

11 We recommend that you install a surge protector if there is a possibility that the device may fail due to lightning-induced surges.

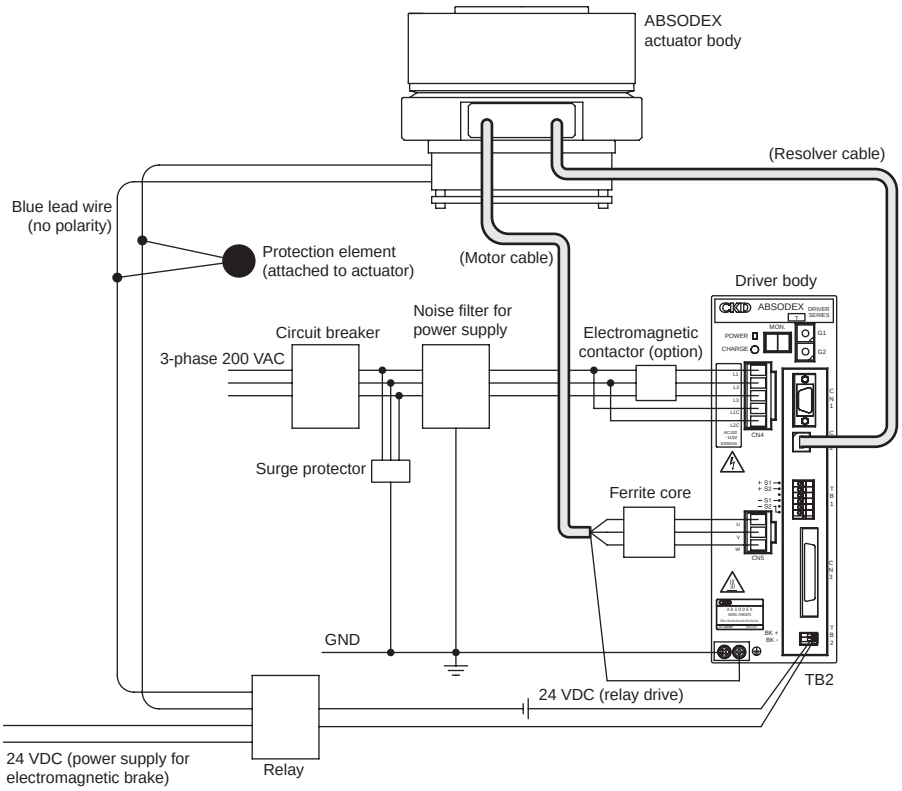
For other precautions, check the materials below.

1. On the Internet
   CKD Component Products Website
   https://www.ckd.co.jp/kiki/en/
   • Instruction manuals

2. Please request the following materials:
   ABSODEX AX Series TS/TH Type Technical Data
   ABSODEX AX Series MU Type Technical Data

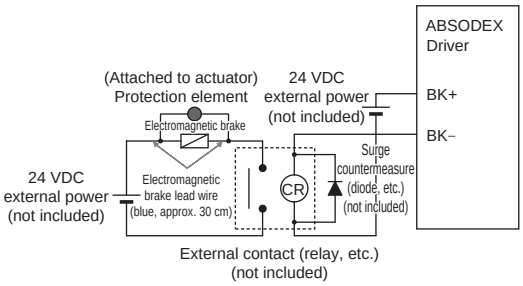
12 Electromagnetic brake connection

AX4000T-EB

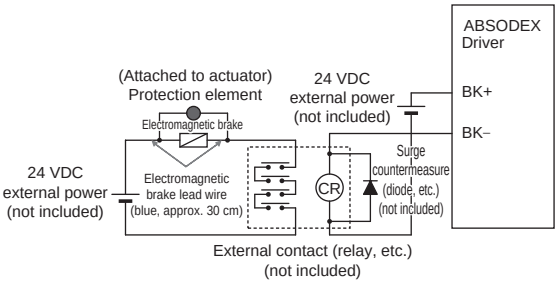


1) Do not use the electromagnetic brake to brake or stop the rotating output shaft.
2) Connecting the BK+ or BK- of the driver directly with the electromagnetic brake damages the driver.
3) To connect induction loads such as the relay shown below to the external contact, use ones with a rated coil voltage of 24 VDC and a rated current within 100 mA, and take a surge suppression measure.

Recommended circuit for electromagnetic brake



- For reed relay serial connection



● Operating method

1. Control by the NC program (M68/M69)
   When the "M68" code is executed, the current is stopped (brake activated) across BK+ and BK-, and when the "M69" code is executed, the current flows (brake released).
2. Control by brake release input (I/O connector, 18 pin)
   With the brake activated, when brake release is input, the current flows (brake released) across BK+ and BK−.

● When the electromagnetic brake is operated frequently (number times turned ON/OFF), use a solid state relays (SSR) for the external contact.
Recommended model G3NA-D210B-UTU DC5-24 (OMRON)
Read the instruction manual of SSR before use.

● Use a relay with the contact capacity of 10 times or more the rated current. For relays with less capacity than the above, use a multi-polar relay for two or more relay contacts to be serially connected. Connection in this way can extend the lifetime of the contact of the relay having contacts.

13 To pass a shaft through the hollow of the model equipped with an electromagnetic brake, use a non-magnetic material (such as SUS303). If a magnetic material (such as S45C) is used, the shaft will be magnetized, causing stuck iron powder on the equipment or giving magnetic effects on peripheral devices.

14 Note that the magnetic force of the electromagnetic brake may cause stuck iron powder or effects on measuring instruments, sensors or other devices.

15 For other precautions, refer to the instruction manual (technical data).

Safety precautions

Labor saving components: Warnings and Cautions

Be sure to read this section before use.

⚠ CAUTION Mounting, installation and adjustment

1. Make sure to use the dedicated cable for connecting between the actuator and driver. Do not modify the length or material of the dedicated cable, as it could cause malfunction or failure.
2. Make sure to connect the proper power supply. Connecting a non-designated power supply could cause failure. When turning ON the power supply after it has been turned OFF, check that the actuator output shaft has stopped. Wait at least 10 seconds after turning OFF the power supply.
3. Before adjusting the gain, securely install the ABSODEX in the machine and securely mount the loads such as the table. Confirm that no interference occurs and that safety is ensured when movable parts are rotated.
4. Do not tap the output shaft with a hammer or apply excessive force during assembly. Doing so could prevent the achievement of full accuracy and performance, or cause failure.
5. Do not place objects that produce strong magnetic fields, such as rare earth magnets, near the actuator. It may not be possible to maintain the original accuracy.
6. The actuator may become hot, depending on the working conditions. Provide a cover or other means to prevent the actuator from being touched.
7. The driver surface may become hot, depending on the working conditions. Place it inside the switchboard or take other measures to prevent it from being touched.
8. Do not drill holes into the actuator. Contact CKD if machining is required.
9. Please do not perform maintenance work on the actuator, the rotary table attached to the actuator or other moving parts.
10. About combining the actuator and driver
    - If the actuator and driver are combined mistakenly after program input (after parameter settings are configured), alarm 3 is activated. Check the actuator and driver combination.
      (Note) Alarm 3 occurs to prevent malfunction if the actuator and driver combination differs from when the program was input. Alarm 3 is reset when the program and parameters are input again.
    - If operation is started with an incorrect actuator and driver combination after the program input (after parameter settings are configured), malfunction could occur or equipment be damaged.
    - Order a separate cable when the length of the cable needs to be changed.
    - If a driver other than the compatible type is connected, it could cause the actuator to burn out.
11. When using a circuit breaker, select one that incorporates high-frequency measures for inverter use.
12. The position of the output shaft on the actuator dimensions does not represent the actuator's origin position. When using it at the output shaft shown in dimension drawings, the origin must be adjusted by the origin offset function.
13. The lead-out cable for the AX4009T, AX2000T Series, and AX6000M Series is not movable. Make sure to secure the cable at the connector so that it does not move. Do not lift up the body by the lead-out cable or apply excessive force to the cable. Doing so may activate the malfunction alarm or cause the connector to break or become disconnected.
14. For additional notes and conditions of compliance to international standards, please refer to the technical data (ABSODEX AX Series TS/TH Type Technical Data, ABSODEX AX Series MU Type Technical Data).
15. Do not pull strongly on the actuator lead-out cable or connector part, as it could cause the lead-out cable shield braid to become exposed.

⚠ CAUTION Use/maintenance

1. Do not pull the cable forcibly, apply excessive force to it, or damage it.
2. If the actuator body is disassembled, the original performance cannot be restored. In particular, disassembly of the rotary position detection unit may cause malfunctions and degradation of accuracy.
3. When performing withstand voltage test on the machine with the ABSODEX installed, disconnect the main power cable to the ABSODEX driver and ensure that no voltage is applied to the driver. This may lead to failure.
4. If alarm 4 (actuator overload: electronic thermal) is activated, wait for the actuator temperature to drop before restarting.
   Alarm "4" may be activated in the cases described below. Remove the cause before resuming use.
   - If caused by resonance/vibration→Sufficiently secure mounting rigidity.
   - If tact/speed → Increase travel time/stop time.
   - When the structure constrains the output shaft, add →M68 and M69 commands.
5. The actuator coordinates are recognized after the power is turned ON. Make sure that the output shaft does not move for several seconds after the power is turned ON.
6. For additional notes and troubleshooting for the alarm display, please refer to the technical data (ABSODEX AX Series TS/TH Type Technical Data, ABSODEX AX Series MU Type Technical Data).

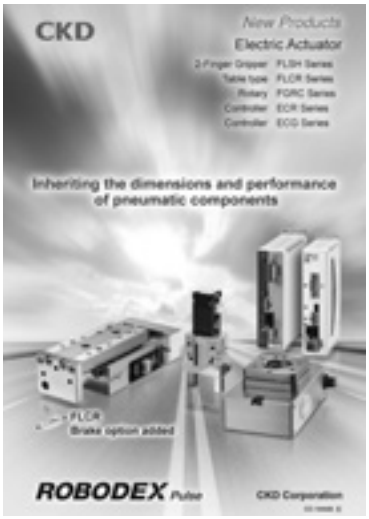
Electric actuator FLSH/FLCR/FGRC Series

Catalog No. CC-1444A



- 2-Finger Gripper FLSH Series
  For soft handling of various workpieces
- Table FLCR Series
  For short-stroke workpiece transport and positioning
- Rotary FGRC Series
  For indexing operation and workpiece inversion
- Controller ECR Series
  "One controller" that connects to any actuator
- Controller ECG Series
  "New Controller" with easy inventory management, easy design, and easy configuration

Electric actuator D Series, G Series

Catalog No.CC-1591A

New electric actuator inheriting the DNA of air Components

- D Series (screw drive method)
  An actuator specialized for positioning between two points
- D Series (Spring drive method)
  Clamp / gripping applications specialized
  Spring integrated actuator
- G Series (screw drive method)
  64-point positioning actuator

Electric actuator EJSG Series

Catalog No.CC-1569A

Electric actuator that can be used in various environments

- Full lineup of the environment-resistant series
  Five products in pursuit of ease of use and high rigidity
  Standard Dust-proof / Low dust specifications
  Compatible with rechargeable battery manufacturing processes and food manufacturing processes
- Compact and highly rigid body
  High rigidity and space saving are realized simultaneously with the use of a wide guide that is integrated with the body.
