CKD

New Products

Pilot operated 3, 5-port valve
Plug-in-type block manifolds

TVG Series

ULTRA-LONG life components contribute to equipment with no downtime

IP65/IP67

HP HIGH PRODUCTIVITY

Green Power WATER

New

In-stop valve spacer and ø10 fittings added

CKD Corporation

CC-1595AA 2

Carbon neutrality comes from reducing CO_2 emissions through long service life products

What "HIGH PRODUCTIVITY" means to CKD

Lower productivity will result in loss. In addition, parts requiring maintenance will be wasted. We believe that achieving high productivity without maintenance leads to carbon neutrality. Our HP Series focuses on the manufacturing principles of such component manufacturers. To improve productivity in places with high usage frequency and high-stress environments, the series serves to create a "production facility with no downtime" and "achieves stable operation" with products that have an unprecedented long service life.

HP

HIGH PRODUCTIVITY

Reduce production loss and waste

Durable

Maintenance cost/time

Rapid replacement possible

Stopping the facility momentarily or for a long time

Early end of life notification

Labor shortage

HP1 Long service life

HP2 Long service life + Predictive maintenance

Carbon neutral

- Reduced exterior leakage
- Energy saving coil option (0.1 W)
- Reclaimed resin used

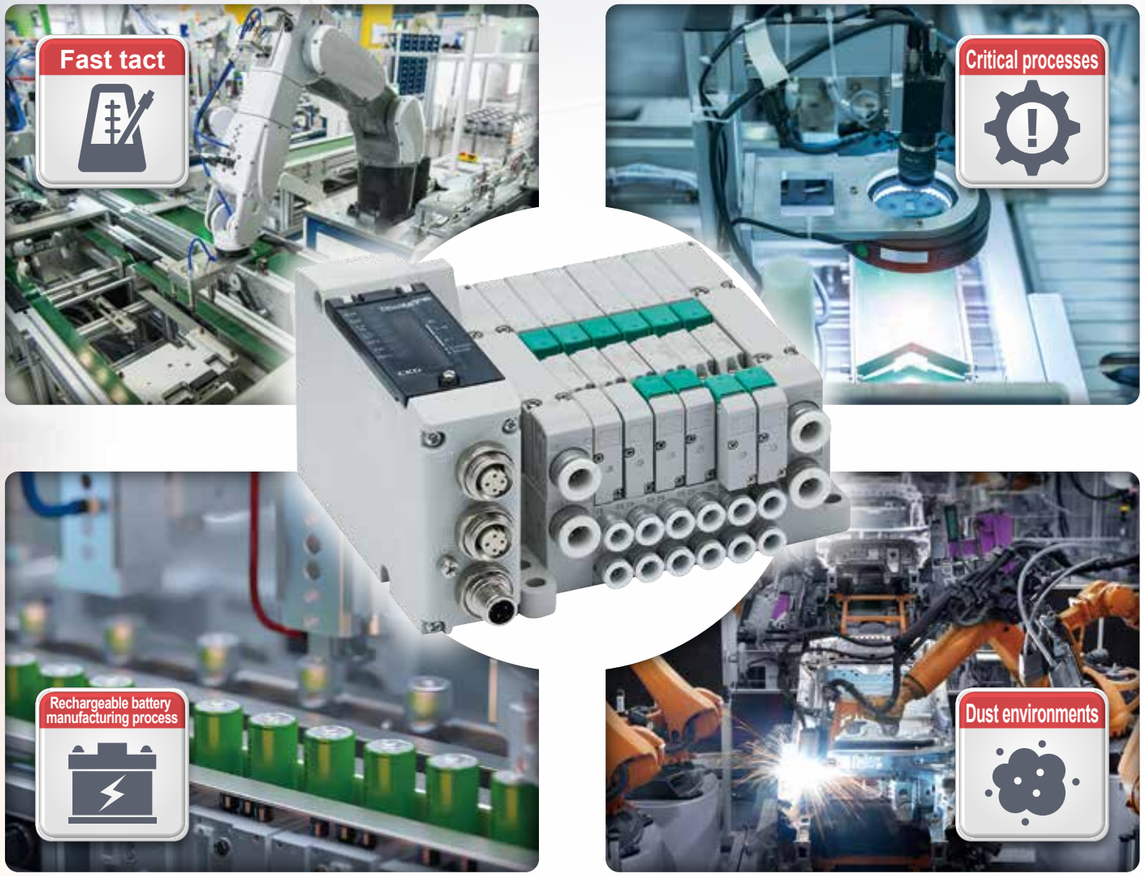
Plug-in valve

Easy to use

- Plug-in structure
- IP65/67
- Improved maintainability (built-in gasket)

High reliability

- Stable operation even with ultra dry air
- High durability of 120 million operations or more (twice that of conventional models)
- No unexplained stoppages



Plugs into various devices

Carbon neutrality and IoT contribute to the visualization of equipment and the elimination of control panels. Waterproof, robust, high-performance, and remote I/O-compatible FA system are key parts of the global model.

Pilot operated 3, 5-port solenoid valve, plug-in block manifold

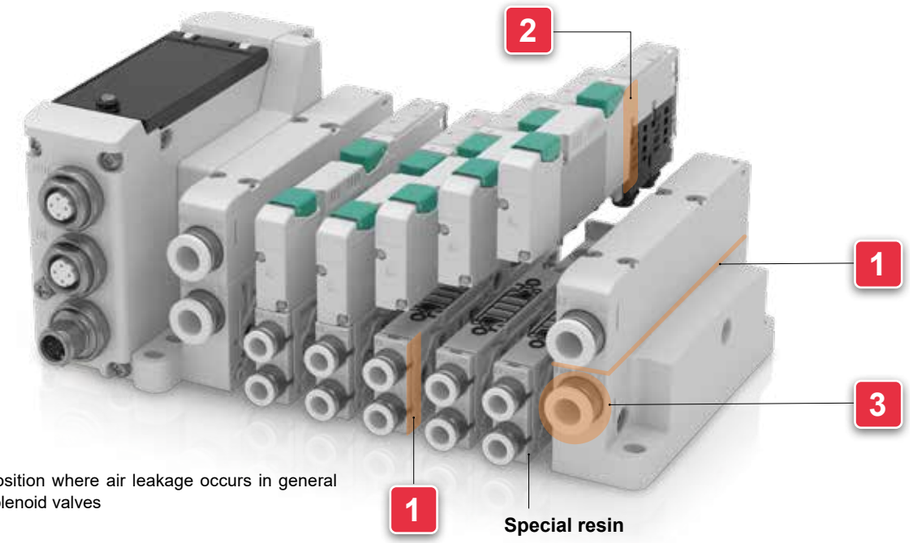
TVG Series

Carbon neutral

Reduces air leakage

Thoroughly improved valve parts that were prone to air leakage.
This plug-in valve is the culmination of CKD's commitment to sustained energy savings even with long-term use.

	Air leakage cause	Commitment to TVG
1	The deterioration of rigidity of resin materials due to moisture in the atmosphere, including during water adhesion, transportation, and storage.	Sealing design to withstand aging and special resin material to reduce air leakage.
2	Coil heating and changes in the ambient temperature cause repeated thermal stress, reducing the rigidity of resin materials.	Coil temperature rise is reduced. Air leakage is reduced with a special resin material and sealing design resistant to aging.
3	Wear of the spool packing causes supply air to run into the exhaust port.	Spool packing and special treatment on the body interior reduce wear.



Position where air leakage occurs in general solenoid valves

Coil performance improved

Continuous energizing possible (low exoergic/energy circuit)

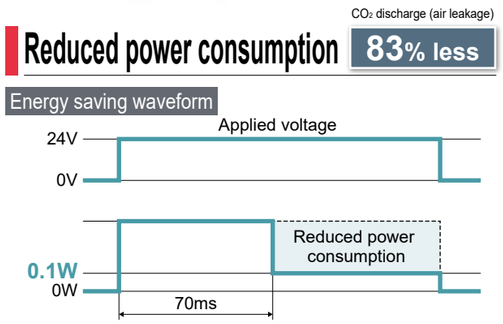
Uses a new coil actuator.

Power consumption

0.1 W (With low exoergic/energy circuit)
0.4 W (Standard products)

Reduced power consumption

CO_2 discharge (air leakage)
83% less



Uses materials with reduced environmental load

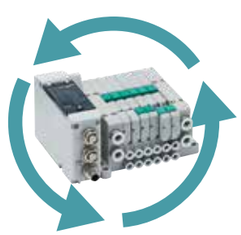
Biomass plastic

Protective cover*1 is made of plant-derived biomass plastic.

*1. The protective cover cannot be closed when manual operation is enabled, making it ideal for preventing forgotten manual operation.

Recycled material resin

The use of recycled resin contributes to reducing the environmental load



High reliability

Strives for stable operation

CO_2 discharge (air leakage)
99.8% less
120 million operation cycles

The TVG Series has been developed to optimize the sliding parts and achieves durability of 120 million cycles or more*. Stable operation due to low friction supports the reliable operation of the actuator, realizing stable operation of equipment and reduction in quality fluctuations.

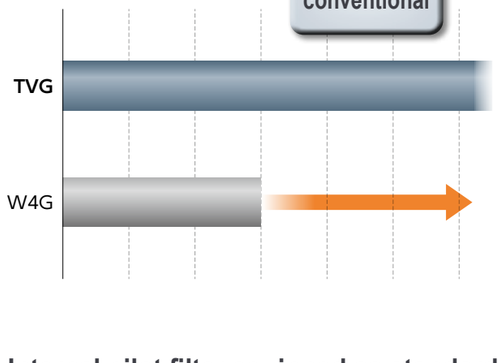
Low friction/Long service life

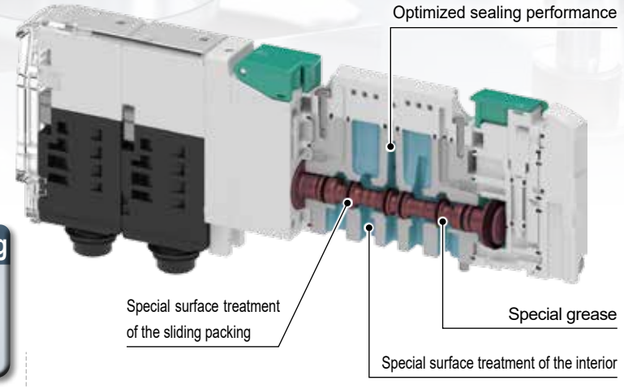
The superb sliding mechanism of the main valve realizes low friction and long service life. The elastic seal withstands 120 million cycles. Achieves both long service life and low air leakage.

Durability count of 120 million operations or more*

*Subject to CKD prescribed conditions.

Elastic sealing
2x conventional





Improved responsivity after startup

Smooth start even after time off. Effective for Monday morning troubles and unexplained stoppages as well.

Special grease used

Lubrication effect continues even with ultra dry air.

Internal pilot filter equipped as standard

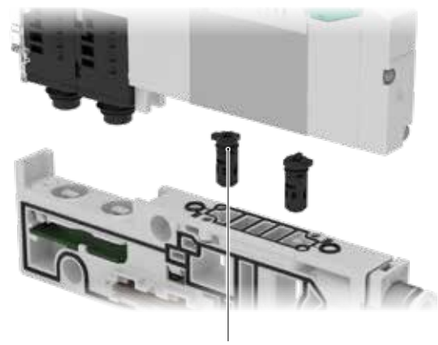
Improved operation stability.

Prevents problems with foreign matter

Port P (air supply) equipped with filter as standard.

Exhaust check valve (option) PAT.P

Retrofitting is possible even after installation.



The outer O-ring prevents small amounts of air from entering. Prevents compact actuators from malfunctioning.

Also compatible with global standards

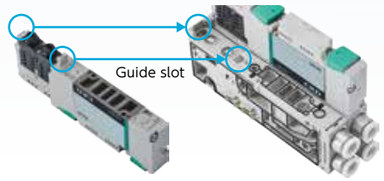
CE UKCA cULus RoHS

Easy to use

Plug-in valve with excellent workability

5 Positioning support as standard PAT.P

A "positioning support" that allows anyone to easily position the valve and base is provided as standard.



6 Easy-to-assemble plug-in connection

PAT.P

Actuator additions are wired complete by plug-ins.

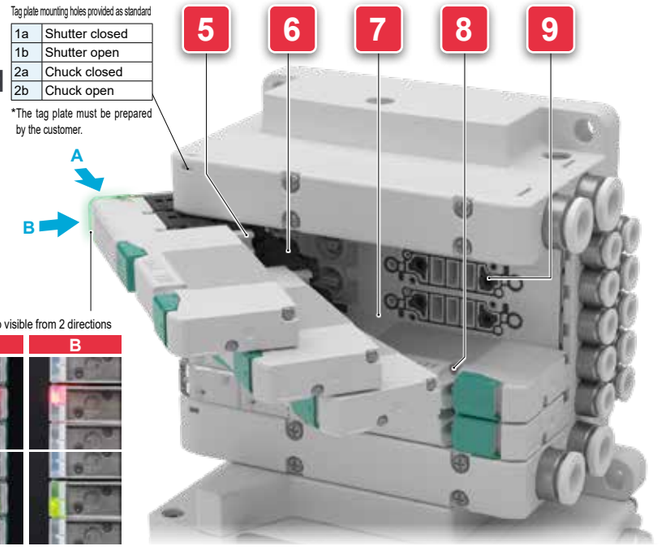
7 Connections that make it easy to adjust the number of stations

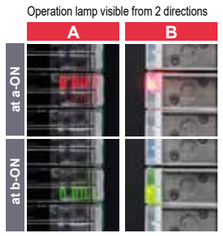
Internal wiring is completed at the same time as the manifold assembly.

8 Screw dropout prevention as standard

9 No parts dropped out

Gasket is built into the base.





Improved environmental performance

IP65/IP67 (dust/water-jet proof) for tough use

IP6*: No inflow of dust
IP*5: No harmful effects by water jets from any direction
IP*7: Prevents water from entering in amounts that would cause harmful effects even if temporarily submerged in water for a specified pressure and time

*TVG can be used in both IP67 and 65 environments. Refer to page 160 for IP performance.

Prevention of coil corrosion

Molded coil specification that is resistant to corrosion. Prevents water from adhering during use and rust due to moisture during transportation and storage.

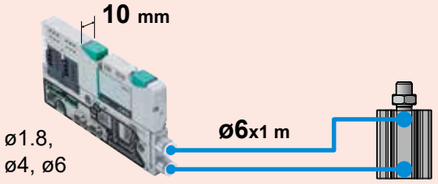
P4 Series for rechargeable battery manufacturing equipment

Restricted specifications for materials and surface treatments inappropriate for rechargeable battery manufacturing processes.

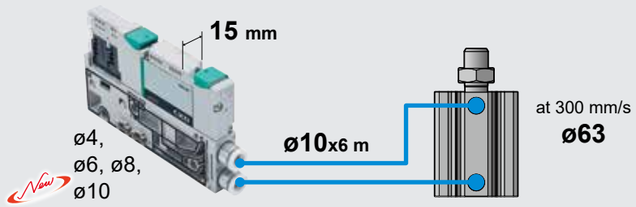
Valve width of 10mm, 15mm are supported

Our first 10 mm wide plug-in valve!

TVG1



TVG2



One Point!

With ø10 fittings, the cylinder can be accelerated even with long-distance piping!

The speed of an air cylinder will decrease if the air piping is long or thin. For applications with long-distance piping where you want the air cylinder to operate at high speed, we recommend using a ø10 fitting, which is one size larger.

Compatible with various communications

Output only	Solenoid valve size	Supported communication	Max. number of points	Max. number of solenoid valves
	TVG1, TVG2	EtherNet/IP*1 DeviceNet, EtherCAT*1, CC-Link IE TSN, CC-Link IE Field*1, CC-Link IE Field Basic*1, CC-LINK, PROFINET*1, IO-Link*1, IO-Link Wireless*1	Solenoid: 32 points	TVG1:24 stations TVG2:24 stations

*1. Solenoid valve ON count function.

With remote I/O	Solenoid valve size	Supported communication	Max. number of points	Max. number of solenoid valves
	TVG1, TVG2	EtherNet/IP, EtherCAT, IO-Link*2 PROFINET	Solenoid: 32 points I/O:4096-point*3	TVG1:24 stations TVG2:24 stations

*2. As a IO-Link master. Solenoid valve communication is EtherNet/IP and EtherCAT.
*3. Solenoid points 32 are included in I/O point count 4096.
*4. Remote I/O must be prepared separately. Refer to Remote I/O RT Series (CC-1557AA) for details.

Easy to use (spacer option)

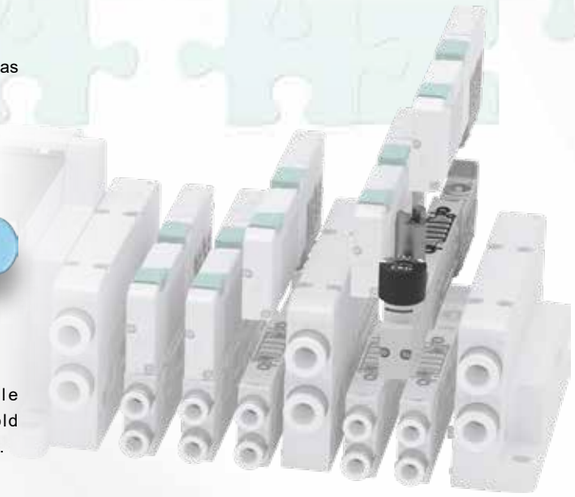
Recommended for situations like these

A Spacer with a Plug-in Structure

We want to handle it by making changes on the valve side.

We want to stock the valves as individual components.

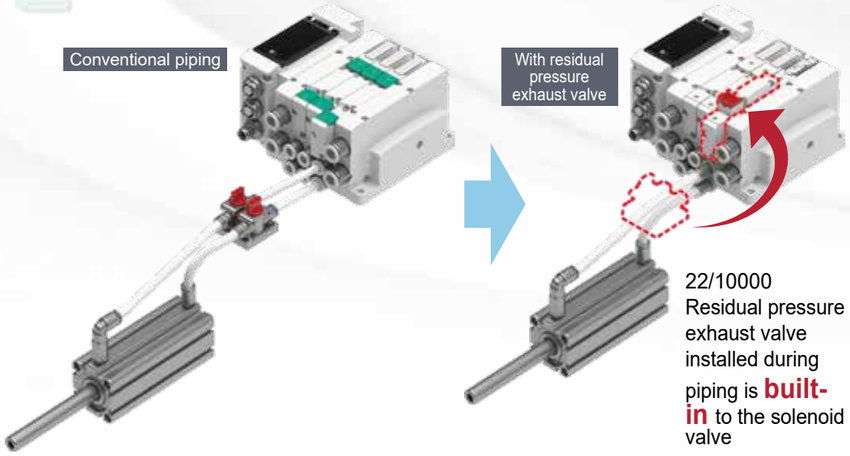
We want to assemble them once the manifold specifications are finalized.



Option

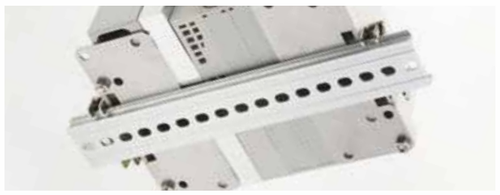
With residual pressure exhaust valve

It is possible to release the residual pressure from ports A and B without dropping the supply pressure.



22/10000 Residual pressure exhaust valve installed during piping is **built-in** to the solenoid valve

DIN rail mount



TAG holder

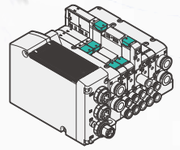
With spacer　　Without spacer

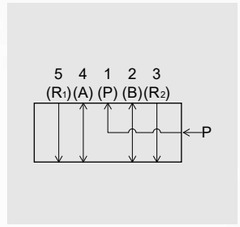
*The same TAG holder with or without spacer

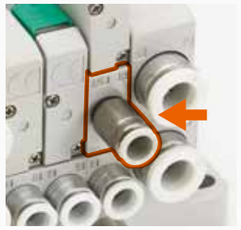
Spacer

Air supply spacer

Air can be supplied at different pressures for each valve. Ideal for adjusting the thrust of cylinders by increasing or decreasing the pressure of individual valves.

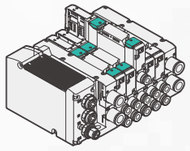


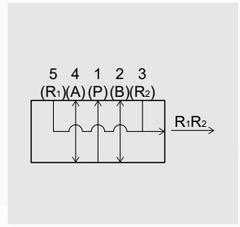




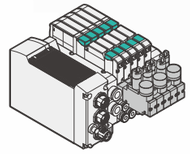
Exhaust spacer

Individual exhaust prevents misoperation of the single acting cylinder to prevent injury to persons and damage to components.





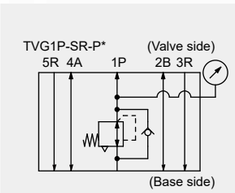
Spacer regulator



Pressure reduction is possible in units of 1 station of valve. P, A, and B can be each reduced in pressure by selecting the model No., enabling detailed cylinder control, etc.

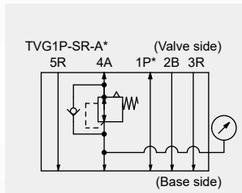
P regulator

Depressurizes both A and B for only one station.



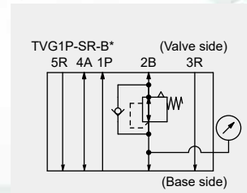
A regulator

Pressure is reduced only for the A side supply pressure of the cylinder connected to the valve.



B regulator

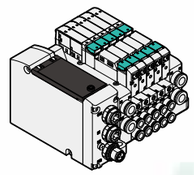
Pressure is reduced only for the B side supply pressure of the cylinder connected to the valve.

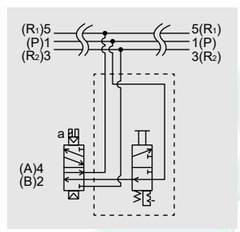


Spacer with in-stop valve

New

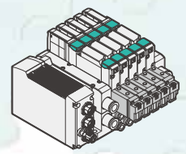
Air can be stopped for each valve. Valves can be replaced individually without stopping production line operation.

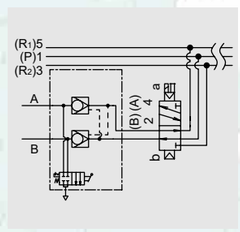


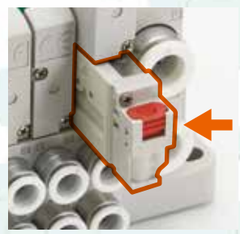


Spacer Pilot Check Valve

Ideal for cylinder position locking and braking over long periods.







Application (IO-Link Wireless)

Industry's first

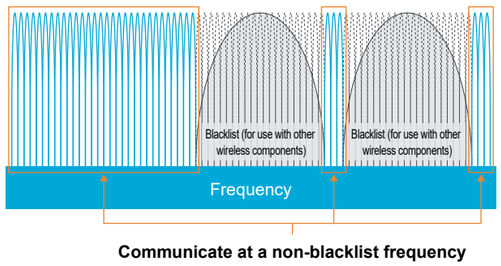
Open network IO-Link Wireless compatible solenoid valve*1

Uninterrupted wireless, usable for control. One billionth error rate. *2 Enables wireless connection of solenoid valve with PLC of various communications via IO-Link Wireless master.

Item	Wireless LAN	Bluetooth	ZigBee	IO-Link Wireless
Standards	IEEE802.11b	IEEE802.15.1	IEEE802.15.4	**IEEE802.15.1**
Frequency	2.4 GHz	2.4 GHz	2.4 GHz	**2.4 GHz**
Communication distance	Up to 100 m	Up to 10 m	Up to 100 m	**Up to 20 m**
Transmission bit rate	11 Mbps	1 Mbps	250 kbps	**21 kbps**
Connection nodes	32	7	128	**40**
Delay time	50 ms	10 to 30 ms	100 ms	**5 ms**
Reliability	Low	Low	Medium	**High**

Blacklist function

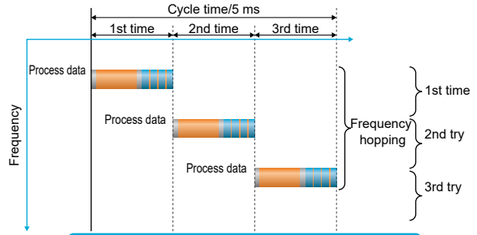
Avoids frequencies used in other wireless components. Coexistence with other wireless components is made possible.



Communicate at a non-blacklist frequency

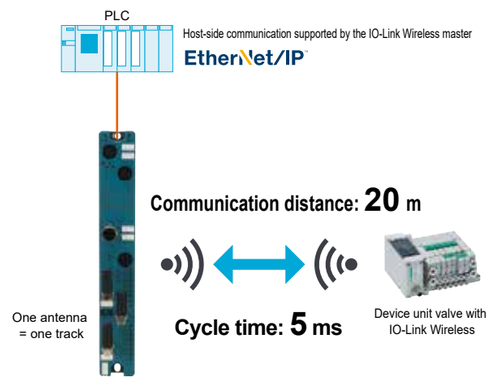
Frequency hopping function

Retries are executed 3 times in one communication cycle by switching frequency bands.



Uninterrupted, low latency

IO-Link Wireless system configuration example



It can also be purchased from CKD. Refer to page 55 for details.

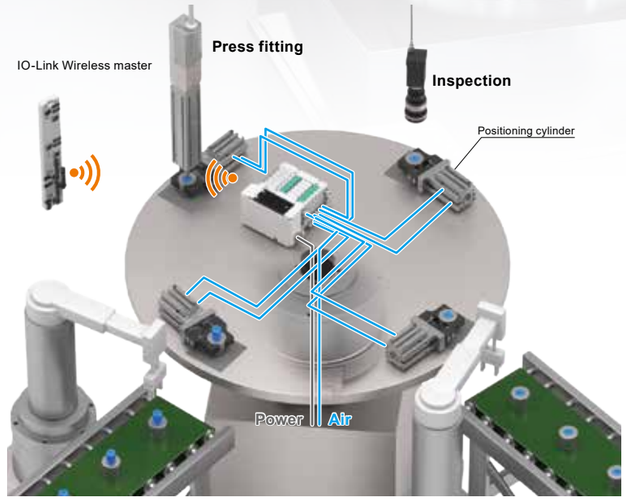
Solenoid valve lineup with IO-Link Wireless device unit

Solenoid valve appearance	IO-Link master (1 track) number of connected units per		Cycle Time
	32 pts Output	1 to 6 units	5 ms
		7 to 8 units	10 ms

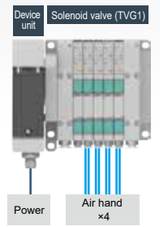
*1. June 2023, CKD research. CKD IO-Link Wireless component compatible regions: Japan and EU, USA.
*2. Blacklist and frequency hopping functions provide wired-like reliability. Wireless quality for use in control.

Assembly / Inspection (rotating table)

The solenoid valve manifold can be installed on the rotary table because the signal line is wireless. Equipment can be designed to improve workpiece positioning accuracy and accommodate a wide variety of workpieces.



Solenoid valve configuration

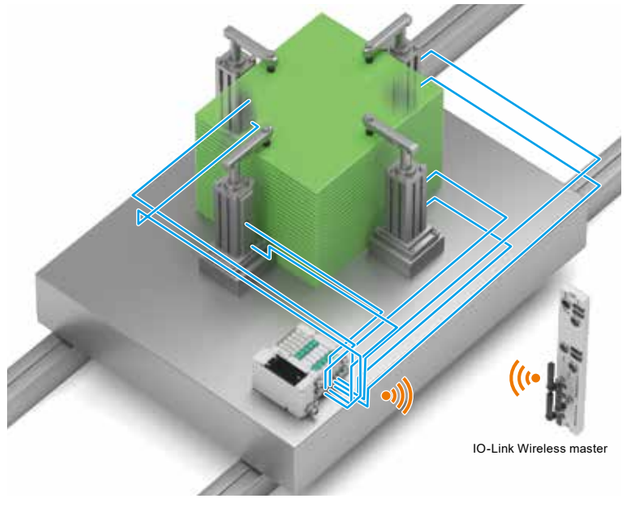


Component configuration

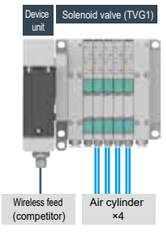
Air hand

Pallet transport

The solenoid valve for cylinder operation in the pallet is made wireless. By combining with a wireless power feed component, it is possible to hold a workpiece for a short time with air sealing even during travel.



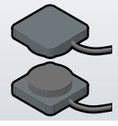
Solenoid valve configuration



Component configuration

Rotary clamp cylinder

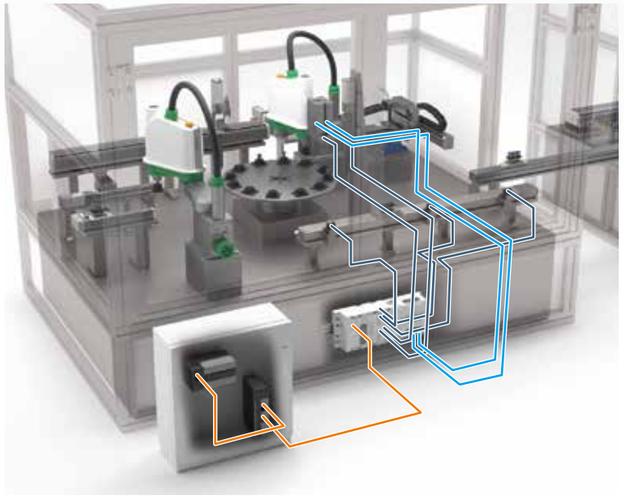
Wireless feed (competitors)



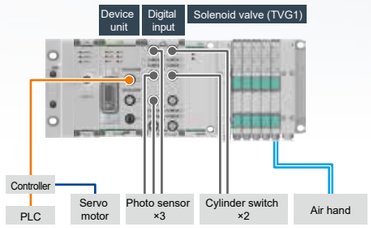
Application

Conveying equipment

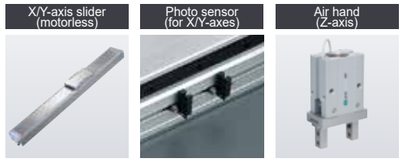
Air piping and electrical wiring can be consolidated in mixed equipment with servomotor-driven actuators and air hands.



Remote I/O configuration



Component configuration

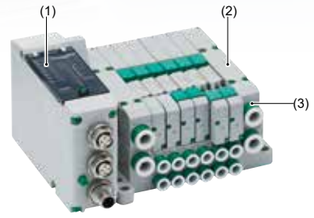


Rechargeable battery manufacturing process

Supports the rechargeable battery manufacturing process from electrode manufacturing to packaging. P4 option compatible with material restrictions and ultra dry air with dew point -80°C available. The long service life of the non-volatile special grease contributes to the stable operation of equipment.

Rechargeable battery option: P4

(1) Electric circuit unit IP65/67
(2) Flow path part Material restrictions
(3) SUS fitting

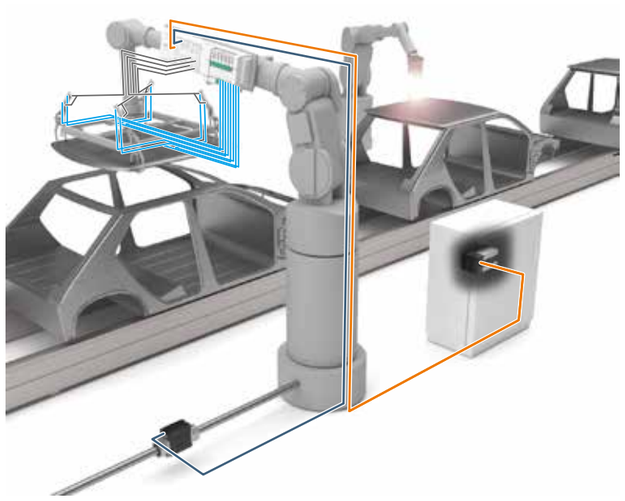


Stable operation even at -80°C dew point is realized by special grease adopted as standard.

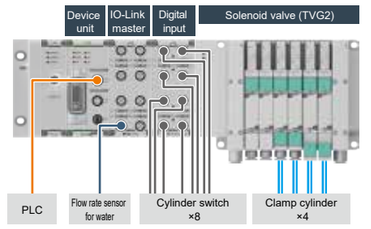
Refer to Rechargeable Battery Compatible Components P4* Series (CC-1226A) for details.

Auto body welding

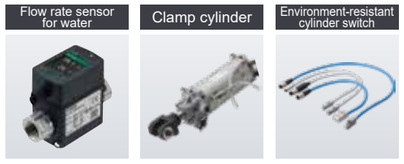
Contributes to reduced wiring of solenoid valves for cylinder drive and cylinder switch input. Only one Ethernet cable is required to complete wiring from the PLC (Programmable Logic Controller), contributing to reduction of installation space and improvement of wiring layout for devices including IO-Link devices.



Remote I/O configuration

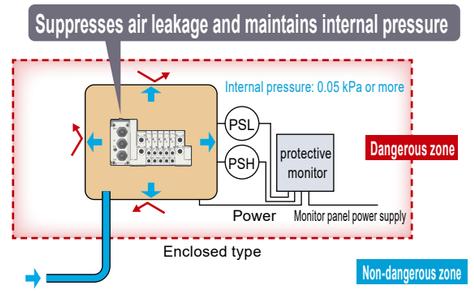


Component configuration



Internal pressure explosion-proof panel

Ideal for applications where solenoid valves are installed in internal explosion-proof control panels. Since there is little air leakage, the influence of pressure control inside the panel is minimized, contributing to stable operation of the equipment.



Supports continuous energization

Energy saving coil (0.1 W) is available as an option, and it supports continuous energization, which is often required for air-operated control.

Special resin

The special resin adopted as standard suppresses secular change and air leakage from the valve for long periods.

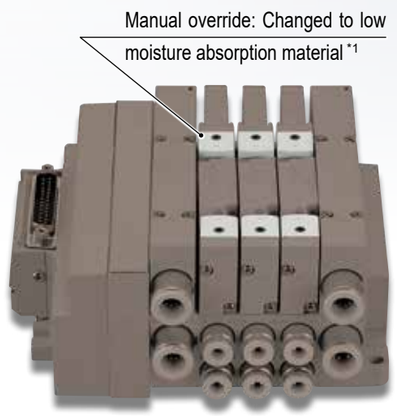
Explosion-proof model certification has not been obtained for discrete solenoid valves. For internal pressure and explosion-proof use, the customer must apply for and obtain a model certification. Observe JNIOSH-TR-46-3 and other standards when performing installation.

Special Specification Product

Compatible with low moisture absorption materials for low dew point environments

Standard Product

Special Specification Product



Features

- Materials with total part moisture absorption rate of 0.25% or less are used
- Ideal for installing solenoid valves in ultra-dry environments

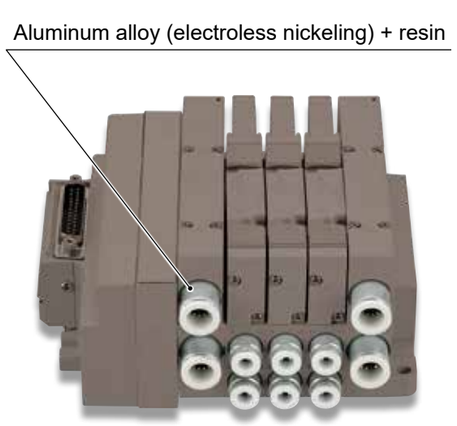
Application

- Rechargeable battery manufacturing

*1. Low moisture absorption material is available only for non-locking, tool operation, without cover (M3).

Fittings All stainless steel tube compatible

Standard Product



Special Specification Product

Features

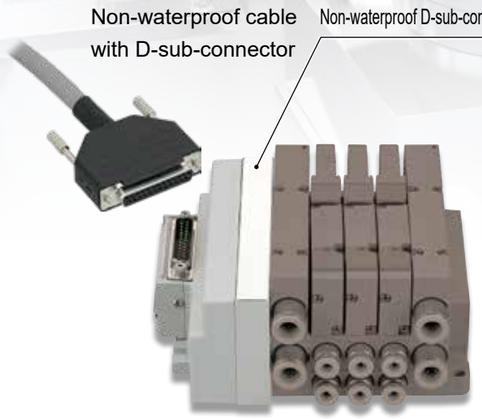
- Improved water resistance
- SUS316L (packing FKM)

Application

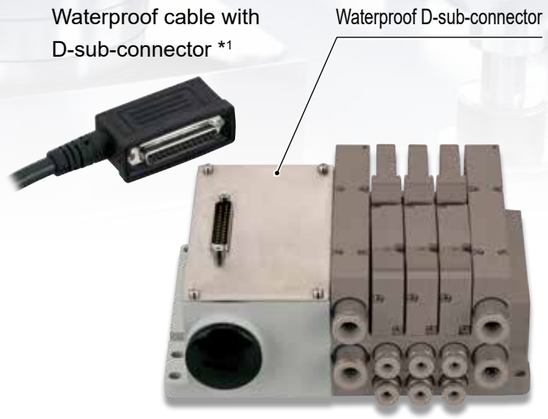
- Rechargeable battery manufacturing
- Food processing machinery

D-sub-connector waterproof specification

Standard Product



Special Specification Product



*1. CKD does not sell these products.

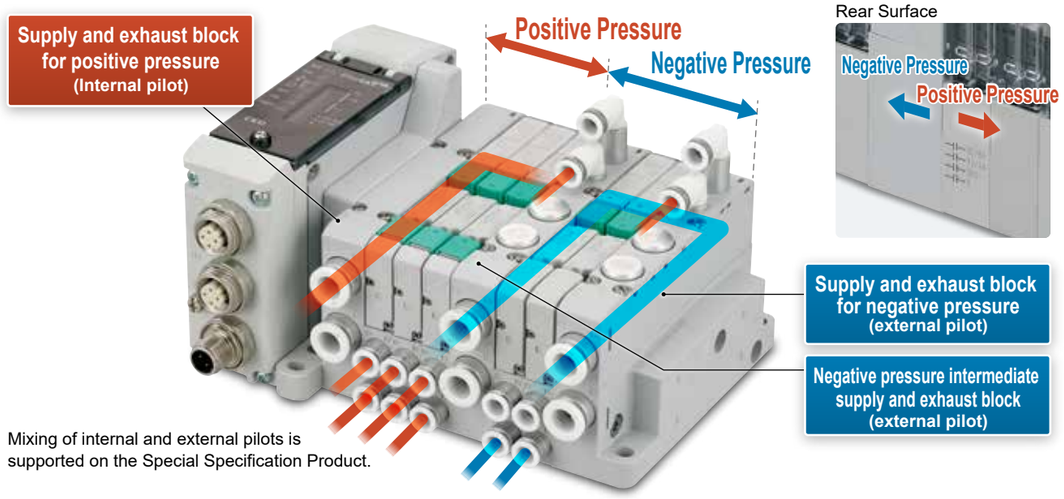
Features

- IP65/IP67 compatible
- 25-pin (max. solenoid number of points: 24)

Application

- Automobile related devices
- Machine tools
- Food processing machinery

Positive pressure/negative pressure mixed



Mixing of internal and external pilots is supported on the Special Specification Product.

Features

- One communication device unit can be used for both positive and negative pressures
- Additional air/vacuum flow rate supply is possible by adding intermediate supply and exhaust blocks
- Vacuum suction/transport of workpieces is supported with a single manifold

[Negative pressure] Vacuum suction [Positive pressure] Air cylinder control

Application

- Automobile related devices
- Food processing machinery
- Electronic parts

CONTENTS

How to order solenoid valve manifold with reduced wiring/serial transmission device unit

The following 3 ordering methods are available.

Ordering method	Manifold specifications sheet	Customer assembly processes	Product delivery date
A Manifold assembly	Required	☆	○
B Easy assembly	Not required	◎	◎
C Discrete block	Not required	○	☆

☆: Excellent, ◎: Very good, ○: Good

Applicable solenoid valve

Reduced wiring

Serial transmission (output only)

A Manifold assembly

The units will be delivered with the specifications specified in the manifold specifications sheet.
Can be ordered with model No. starting with TVG□M and a manifold specifications sheet.

TVG□M

□: Valve size

Page 9

+

Manifold specifications sheet

Page 117

B Easy assembly

The single solenoid valve and assembled manifold base will be delivered separately. The following parts model No. can be ordered. The customer is required to assemble a single solenoid valve and a manifold base.

Single solenoid valve (For mounting base)
Specs not required
TVG□-
□: Valve size

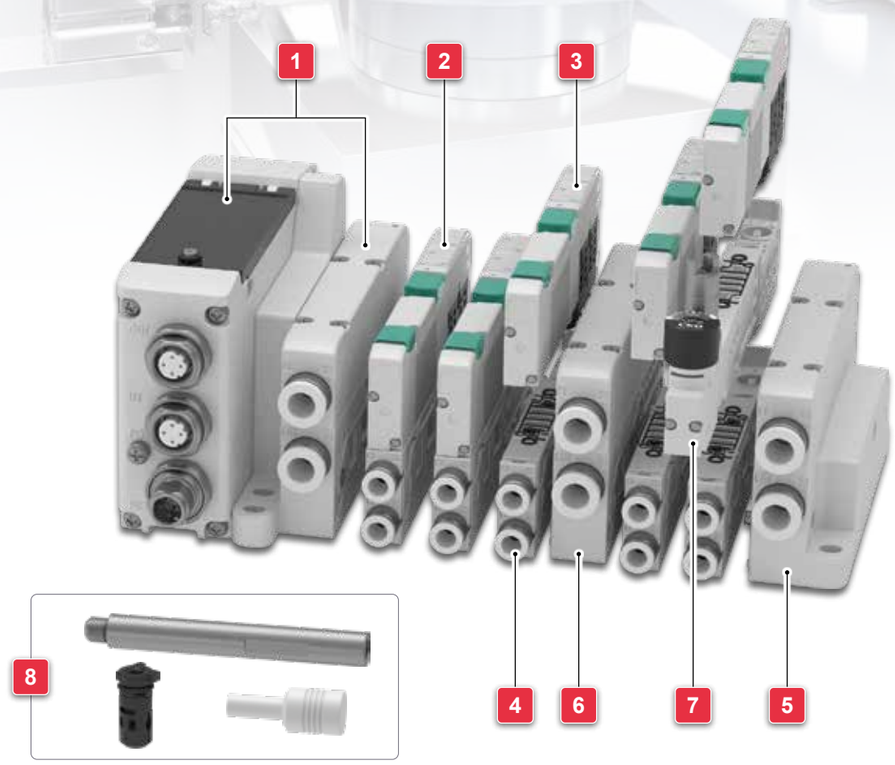
Exhaust malfunction Prevention valve
Specs not required
TVG□P-
□: Valve size

Page 54

*1. The manifold base is limited to options that can be manufactured without the need for specifications, such as double wiring and no malfunction prevention valve assembly.

C Discrete block

Each part is delivered separately. The customer must assemble the manifold by combining the parts. You can order the parts below with their model Nos.



No.	Name	Head model No.	Listed page
1	Wiring supply and exhaust block	TVG□P- □: Valve size	P. 39
2	Valve block with solenoid valve		P. 41
3	Solenoid valve discrete (for base mounting)		P. 17
4	Valve block		P. 45
5	End supply and exhaust block		P. 50
6	Intermediate supply and exhaust block		P. 51
7	Spacer		P. 19
8	Tie rod, silencer, exhaust check valve		P. 49, 54
	Other related parts		P. 53

Plug-in Block Manifold
Pilot Operated 3, 5-Port Valve

TVG1 / TVG2 Series

Manifold common specifications

Item		Content
Manifold		Block manifolds
Mounting Method		Direct mounting
Air supply and exhaust method		Common supply/common exhaust (With internal exhaust check valve)
Pilot exhaust method Internal pilot (*5)		Main valve/pilot valve common exhaust (Pilot exhaust check valve built-in)
Piping direction		Side direction of base
Valve Type and Operation Method		Pilot operated soft spool valve
Operating Fluid		Compressed Air
Max. working pressure MPa		0.7
Internal pilot Min. working pressure MPa	2-position double	0.1 (*7)
	2-position single 3-position	0.2
	3-port valve Two valves integrated	0.2
Min. working pressure of external pilot kPa		-100 (Pilot pressure at 0.2MPa or more)
Proof Pressure MPa		1.05
Ambient Temperature °C		−5 to 55 (no freezing)
Fluid temperature °C		5 to 55
Manual Override		Non-locking/locking common (standard)
Lubrication (*1)		Not required
Degree of protection (*2) (*8)		IP65, IP67
Vibration resistance m/s² (*9)		50 or less
Shock resistance m/s²		≤ 300
Atmosphere		Cannot be used in corrosive gas environments

Electrical specifications

Item		Reduced wiring connection EA1□, FA1□, GA1□	Serial transmission JA□□, JB□□
Rated Voltage (V)		24 VDC	24 VDC
Voltage fluctuation range (*3)		±10%	+10%, -5%
Holding current A	Standard	0.017	
	With low exoergic/ With low exoergic	0.005	
Power Consumption W	Standard	0.4	
	With low exoergic/ With low exoergic	0.1	
Thermal class		B	
Surge suppressor (*4)		Zener diode	
Indicator		LED	

*1: Use turbine oil Class 1 ISO VG32 for lubrication. Excessive or intermittent lubrication results in unstable operation.
*2: Tested according to the test method for IP65 and IP67 (IEC 60529: 2001) standards. Refer to page 160 for details.
*3: As the voltage drop occurs depending on the internal circuit of theserial transmission, be careful of the voltage fluctuation range.
*4: If low exoergic/energy circuit or surgeless types are selected then there will be a diode.
*5:The pilot exhaust method differs with the supply and exhaust block specification. Refer to page 52 for details.
*6: When using at low vacuum, select the external pilot. Refer to page 162 for details.
*7: 0.2MPa for low exoergic/energy circuit.
*8: The degree of protection of the D-sub-connector (GA1□) is dust-proof IP40 or equivalent. Avoid water drops or oil, etc., during use.
*9: For DIN rail mount vibration resistance, keep the vibration applied to the manifold to 20m/s² or less for 2 to 12 stations, and to 10m/s² or less for 13 to 16 stations.

Individual specifications

*1: Ports A and B are available with one-sided plug specifications for 2-position single only.
*2: 3-position is not available for L-type upward push-in fittings.
*3: Port size mixtures of ports 4(A) and 2(B) are not available.
*4: The compatible ø for tube 1.8 push-in fitting is "UP-9402- * *".
*5: Custom Product.

How to order (manifold with solenoid valve)

Rechargeable Battery Compatible Specification For details, please refer to P. 90.

● For use in the rechargeable battery manufacturing process, materials used for air path and sliding section are limited

✱✱ - ✱✱ - ✱✱ - P4

❻ Station No.

Code	Content	
02	2 stations	
L	L	*1, *2
24	24 stations	

*1: Differs depending on the reduced wiring specifications. Refer to the individual specifications (on page 7).
*2: ❼For mount "R" (DIN rail), the max. station No. is 16.

❼ Port P/R position

* Multiple selection is not possible.

Code	Content	
U	U side	
D	D side	
B	U side, D side	
T *1	U side, D side, With intermediate supply and exhaust block	

*1: Specify the specifications of the intermediate supply and exhaust block in the manifold specifications sheet.

❽ Base internal wiring system*1

Code	Content
Blank	(double wiring)
S	Single solenoid, Double solenoid layout specification

*1: Blank = Double solenoid wiring regardless of the type of valve used. If a single solenoid is mounted, an empty number for one solenoid will be generated. Refer to page 157 for details.

❾ Pilot operated

Code	Content	
Blank	Internal pilot	
K	External pilot	
❿ Electrical circuit specification

* Multiple selection is not possible.

Code	Content
Blank	With surge suppressor and indicator lamp
E1	Low exoergic/energy saving circuit (surgeless specifications)
E2	Surgeless

*1:Combination of "E2" and PNP specifications is Custom Product.

⓫ Multiple manual override

* cannot be selected.

Code	Content	
Blank	With locking, non-locking common, misoperation prevention cover	M1	Non-locking, with misoperation prevention cover	M2	Locking/non-locking common, tool operation, without cover	M3	Non-locking, tool operation, without cover	
⓬ Ozone/Coolant proof

Code	Content
Blank	Standard specifications
A	Ozone/Coolant proof (Main valve fluorine specification)

⓭ Residual pressure exhaust valve

Code	Content	
Blank	Without residual pressure exhaust valve	
Y1 *1, *2	With non-locking residual pressure exhaust valve	Y2 *1, *2	With locking residual pressure exhaust valve	

*1: ❶Solenoid position "3" and "4" only are supported.
*2: ⓫Only the manual override "M2" and "M3" are supported.

⓮ With/Without spacer

Code	Content
Blank	Without spacer
Z	With spacer (Type and location are specified in the MF specifications sheet)

*1: Specify the spacer type and mounting position in the manifold specifications sheet. Stacking of spacers is not possible. Combination with the blanking plate is not supported. Cannot be selected together with L-type push-in fitting (upward).

⓯ Exhaust check valve

Code	Content	
Blank	None	
H *1	With exhaust check valve	
*1: ❶Solenoid positions "3" and "5" cannot be selected. Refer to page 163 for details on the type with exhaust check valve. Specify the number of stations to install in the manifold specifications sheet.

⓰ Port A/B filter

Code	Content	
Blank	None	
F	Port A/B filter built in	
*1: A filter is built into port P.

⓱ Mount type

Code	Content
Blank	Direct mount
R	DIN rail mount

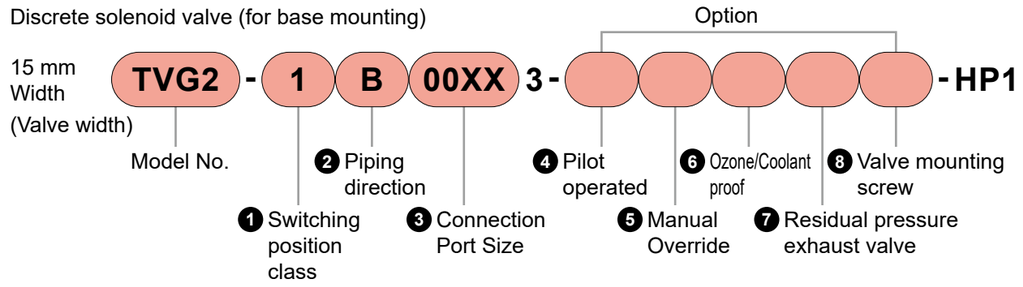
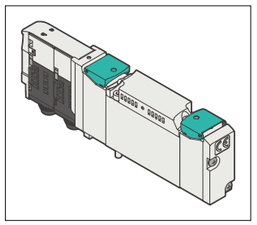
TVG2 Series

How to order (solenoid valve single unit)

model No. Notation Method

Discrete solenoid valve (for base mounting)





Attached Parts
- The valve mounting screws are included.
- The gasket is attached to the manifold base.

❶ Switching position class

Code	Content	
1	2-position single	
2	2-position double	
3	3-position closed center	
4	3-position exhaust center	
5	3-position pressure center	
*1 A	3-port valve Two valves integrated	A valve side: Normally Closed B valve side: Normally Closed
*1 B		A valve side: Normally Open B valve side: Normally Open
*1 C		A valve side: Normally Closed B valve side: Normally Open

*1: Only compatible with internal pilot. Dimensions of the Dimensions diagram are the same as those of 2-position double.

❷ Piping direction

Code	Content
B	Side piping

❸ Connection Port Size

Code	Content
00XX	Discrete solenoid valve for base

❹ Pilot operated

Code	Content
Blank	Internal pilot
K	External pilot

❺ Manual device * Multiple selections are not possible.

Code	Content	
Blank	With locking, non-locking common, misoperation prevention cover	M1	Non-locking, with misoperation prevention cover	M2	Locking/non-locking common, tool operation, without cover	M3	Non-locking, tool operation, without cover	

❻ Ozone/Coolant proof

Code	Content
Blank	Standard specifications
A	Ozone/Coolant proof (main valve fluorine specification)

❼ Residual pressure exhaust valve

Code	Content	
Blank	Without residual pressure exhaust valve

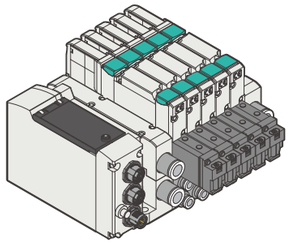
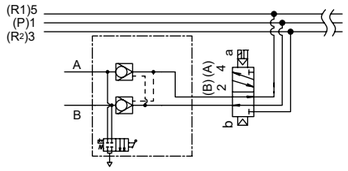
Spacer Pilot Check Valve (spacer pilot check valve)



Specifications

Item		TVG1P-PC-□	TVG2P-PC-□
Operating Fluid		Compressed Air	
Maximum Operating Pressure	MPa	0.7	
Min. working pressure	MPa	0.2	
Proof Pressure	MPa	1.05	
Ambient Temperature	°C	−5 to 55 (no freezing)	
Working fluid temperature	°C	5 to 55	
Atmosphere		Cannot be used in corrosive gas environment.	
Weight	g	34	73

Circuit Diagram Symbol



*: Please note that if you use cylinders with a large bore (guideline ø50 or more) in a state with almost no throttling on the exhaust side (e.g., without a speed controller or silencer), this may lead to a decrease in intermediate stop accuracy and intermediate stop failure.

Discrete model No.

TVG1 P − PC − M

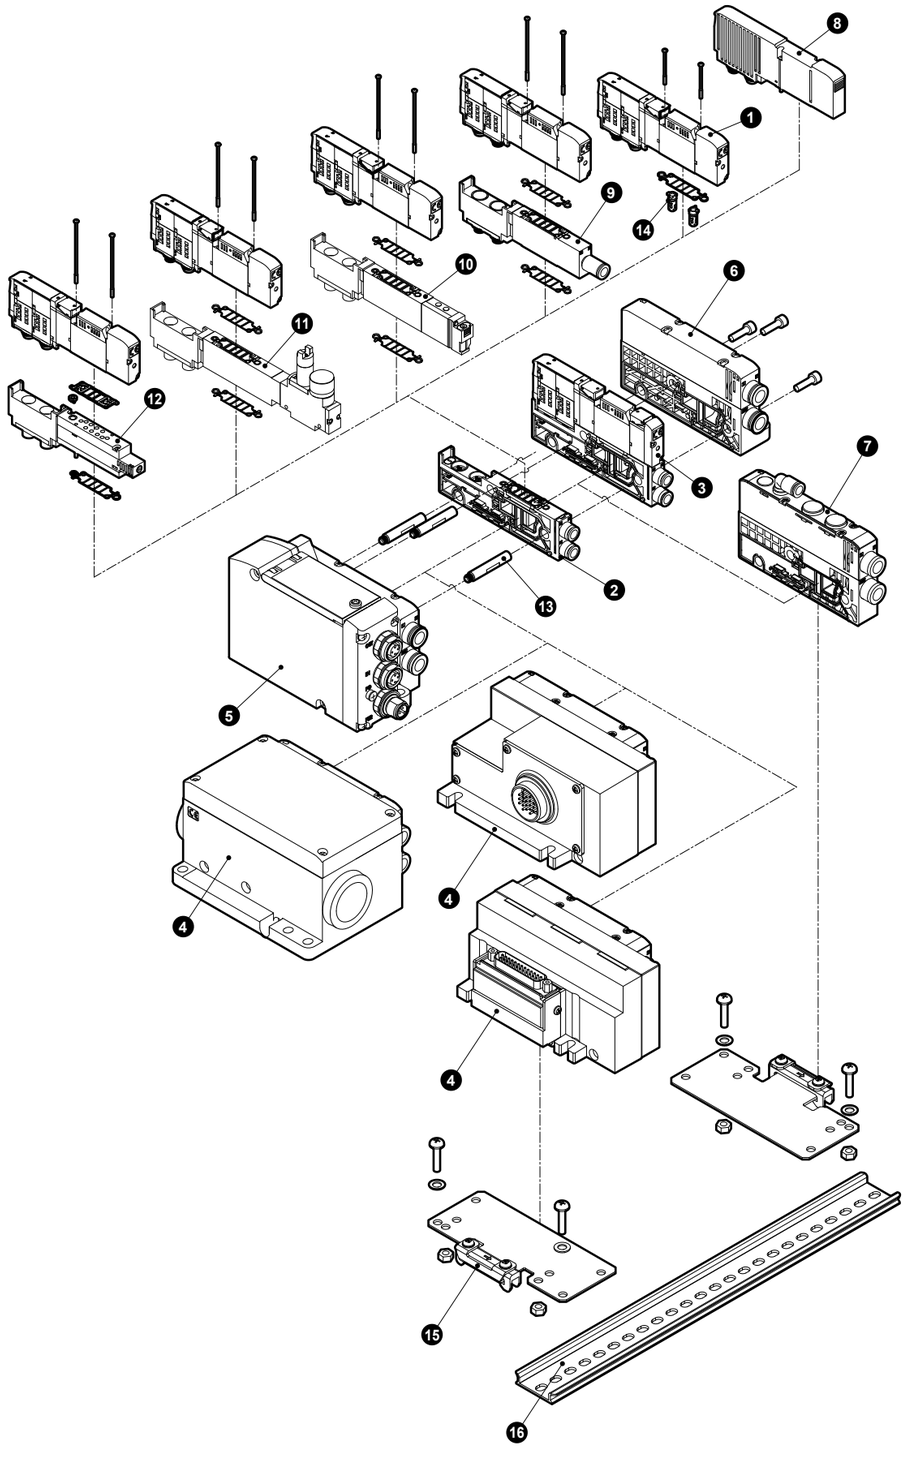
Block manifolds Configurations

As it can be freely assembled, it is easy to change the number of stations, perform maintenance, etc.



Part No.	Part Name	Model No. (Example)	Remarks	Page Listed
1	Discrete solenoid valve (for base mounting)	TVG1-1B00XX3-HP1	A wide range of solenoid valves is available. It is also possible to have solenoid valves of different solenoid positions mixed in the same manifold.	P. 17
2	Valve block	TVG1P-VB-06CS3	The block on which the solenoid valve is based. Mount according to the required number of stations of solenoid valves. However, the number of stations depends on the wiring method. (Refer to pages 7 and 63.) As option is selected, it is also possible to partition the flow path in the manifold.	P. 45
3	Valve block with solenoid valve	TVG1P-1B06CS3-HP1	–	P. 41
4	Wiring block (common terminal block) Multi-connector D-sub Connector	TVG1P-TB-08CS-EA1	These blocks provide electrical wiring to the manifold and provide the air and exhaust functions.	P. 39
5	Wiring block (serial transmission)	TVG1P-TB-08CS-JA1C		P. 39
6	End block	TVG1P-EB-08CS	Block that provides air supply and exhaust to the manifold. Mount the block on the opposite side of the wiring block.	P. 50
7	Intermediate supply and exhaust block	TVG1P-QB-08CS	Block that provides air supply and exhaust to the manifold. Use this when the number of valve stations increases, or when the supply flow rate shortage is a concern.	P. 51
8	Blanking plate	TVG1P-BP	Assembled with a spare valve block for use if a solenoid valve will be added later.	P. 54
9	Air supply spacer	TVG1P-P-06CS	Use this when supplying different pressures for each station.	P. 19
	(exhaust spacer)	TVG1P-R-06CS	Used for individual exhaust. Use this product to prevent misoperation due to increased exhaust capacity and exhaust lead-in.	P. 19
10	Spacer Pilot Check Valve	TVG1P-PC-	Use this to stop the cylinder midway and to prevent it from falling.	P. 21
11	Spacer regulator	TVG1P-SR-P-G1	Pressure can be adjusted individually for each station. Port P, A and B pressure reduction types are available.	P. 22
12	In-stop valve spacer	TVG1P-IS	The air supply can be shut off individually for each station.	P. 23
13	Tie rod	TVG1P-TR-05	TVG1 is available in sets of 3, and TVG2 is available in sets of 2.	P. 49
14	Check valve	TVG1P-CHECK-VALVE	Prevents cylinder malfunction (popping out phenomenon) caused by exhaust air lead-in.	P. 54
15	DIN rail mounting bracket kit	TVG1P-D	A direct mount manifold can be modified to DIN rail mount manifold.	P. 53
16	DIN Rail	N4GR-BAA200	For how to calculate the standard length, refer to page 118.	P. 53

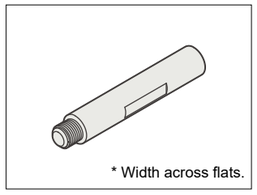
24	For 24 stations

Regarding expansion

- Manifold can expand by 3 stations with 2 to 17 stations. Up to three stations can be expanded in total: valve block and intermediate supply and exhaust block. When increasing 18 or more stations of manifolds, use a tie rod that matches the station No. after the increase.
- Fix the tie rod for station expansion/tie rod for intermediate supply and exhaust onto the wiring block. If installed on the end block side, it may not be able to be assembled correctly.



* Width across flats.

Model No. Notation Method

End block (U side)

A hexagon socket head cap screw for tie rod tightening and a gasket between the block are included.

Model No. Notation Method

Intermediate supply and exhaust block

The intermediate supply and exhaust block can be installed between the valve block and the valve block. These blocks cannot be adjacent to each other. In addition, this block cannot be adjacent to an end block or wiring block. The electrical internal wiring and the P.R.PA.PR port connect to the adjacent blocks.

TVG

3, 5-port pilot operated valve, plug-in block manifold

connection

∗Remote I/O requires separate ordering.

CONTENTS

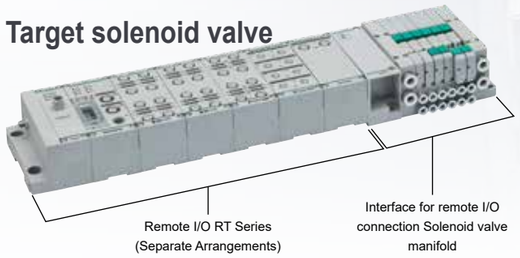
Remote I/O (RT Series) and solenoid valve (TVG Series) must be ordered separately. The customer is asked to assemble the RT and TVG.

The following 3 types of ordering methods are available.

Ordering method	Manifold specifications sheet	Customer assembly processes	Product delivery date
A Manifold assembly	Required	☆	○
B Easy assembly	Not required	◎	◎
C Discrete block	Not required	○	☆

☆: Excellent, ◎: Very good, ○: Good

Target solenoid valve



A Manifold assembly

The units will be delivered with the specifications specified in the manifold specifications sheet. Can be ordered with model No. starting with TVG□M and a manifold specifications sheet.

Remote I/O
Specifications not required
RT Series
(Separate order)

Remote I/O RT Series
(CC-1557AA)

+

Manifold with solenoid valve (for remote I/O connection)
Specifications required

Page 65

+

Manifold specifications sheet

Page 117

*1. The manifold base is only available with a valve interface.
*2. The device unit is a remote I/O (RT Series) device unit.
*3. Select the remote I/O in a separate catalog (RT Series).
*4. The remote I/O and manifold with solenoid valve must be assembled by the customer. Refer to "Remote I/O RT Series (CC-1557AA)" for how to assemble.

B Easy assembly

The single solenoid valve and assembled manifold base will be delivered separately. The following parts can be ordered with their model Nos. The customer is required to assemble the single solenoid valve and manifold base.

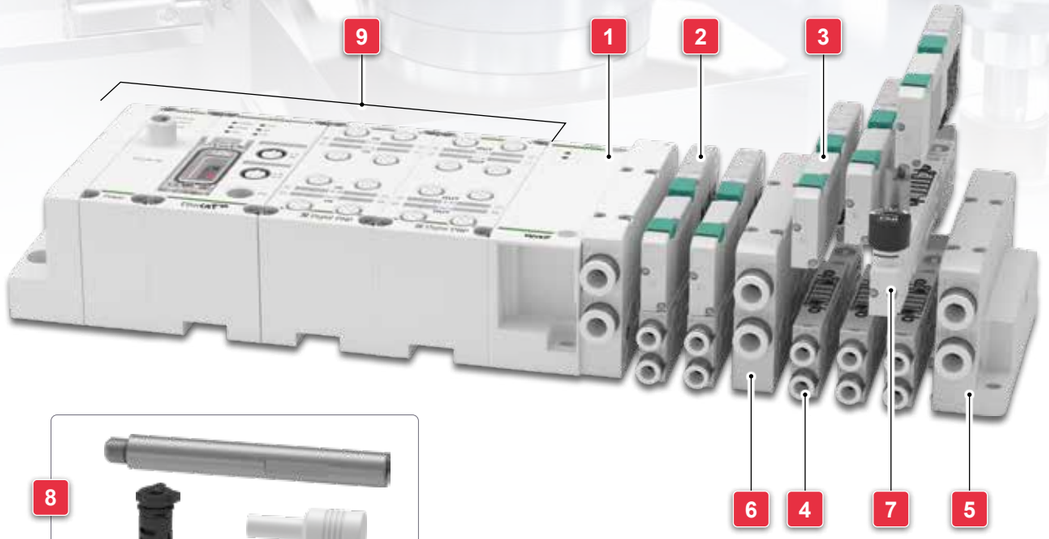
*1. The manifold is limited to options that can be manufactured without a specification sheet, such as double wiring and no malfunction prevention valve assembly.
Note: This catalog lists TVGs. Alone, the solenoid valve section does not work, so please assemble the remote I/O and solenoid valve.

C Discrete block

Each part is delivered separately. The customer must assemble the manifold by combining the parts. You can order the parts below with their model Nos.



No.	Name	Head model No.	Listed page
1	Valve interface (supply and exhaust air)	TVG□P- □: Valve size	P. 88
2	Valve block with solenoid valve		P. 41
3	Discrete solenoid valve (for base mounting)		P. 73

9	Device unit	RT	Remote I/O RT Series (CC-1557AA)
	Power supply unit		
	I/O unit		
	End unit (without supply and exhaust)		

* Remote I/O requires separate ordering.

Plug-in Block Manifolds (for connection)
Pilot Operated 3, 5-Port Valve

TVG1 / TVG2 Series

Manifold common specifications

Item		Content
Manifold		Block manifolds
Mounting Method		Direct mounting
Air supply and exhaust method		Common supply/common exhaust (With internal exhaust check valve)
Pilot exhaust method Internal pilot	(*5)	Main valve/pilot valve common exhaust (Pilot exhaust check valve built-in)
Piping direction		Side direction of base
Valve Type and Operation Method		Pilot operated soft spool valve
Operating Fluid		Compressed Air
Max. working pressure	MPa	0.7
Internal pilot min. working pressure MPa	2-position double	0.1 (*6)
	2-position single / 3-position	0.2
	3-port valve Two valves integrated	0.2
Min. working pressure of external pilot	kPa	-100 (Pilot pressure at 0.2 MPa or more)
Proof Pressure	MPa	1.05
Ambient Temperature	°C	−5 to 55 (no freezing)
Fluid temperature	°C	5 to 55
Manual Override		Non-locking/locking common (standard)
Lubrication	(*1)	Not required
Degree of protection	*2	IP65, IP67
Vibration resistance m/s^2		50 or less
Shock resistance	m/s^2	≤ 300
Atmosphere		Cannot be used in corrosive gas environments

Electrical specifications

Item			KA1C	KA1D
Output Specification	Output Format		NPN	PNP
	Number of Output Points		32 points (4 bytes)	
	Response time ms		typ. ON delay 0.5 or less / OFF delay 1.0 or less	
	Forced output setting		Output settable regardless of process data.	
	Supply power V		24 VDC	
Electrical specifications	Internal consumption Current mA	For unit/input	≤ 15	
		For output	≤ 75	
	Operation Indicator		LED (for components status display, 2 pcs)	

*1: Use turbine oil Class 1 ISOVG32 for lubrication. Note that excessive or intermittent lubrication results in unstable operation.
*2: Tested according to the test method for IP65 (IEC 60529: 2001) standards. Refer to page 160 for details.
*3: If low exoergic/energy circuit or surgeless types are selected then there will be a diode.
*4: The pilot exhaust method differs with the supply and exhaust block used. Refer to page 52 for details.
*5: When using at low vacuum, select the external pilot. Refer to page 162 for details.
*6: 0.2 MPa for low exoergic/energy circuit.

Individual specifications

Item			TVG1 KA1□	TVG2 KA1□
Max. station No.	Standard wiring (Double wiring)		16 stations	16 stations
	Single solenoid, double solenoid layout specification (Single wiring)		24 stations	24 stations
Max. number of solenoids			32 points	32 points
Connection Port Size	Metric fitting	Port A/B	Push-in fitting ø1.8, ø4, ø6	Push-in fitting ø4, ø6, ø8, ø10
		P/R Port	Push-in fitting ø6, ø8	Push-in fitting ø8, ø10
	Inch fitting	Port A/B	Push-in fitting ø1/8", ø5/32"	Push-in fitting ø1/4", ø5/16"
		P/R Port	Push-in fitting ø5/16"	Push-in fitting ø3/8"

Performance/characteristics by model

Item	Switching position class		TVG1 at ON	TVG1 at OFF	TVG2 at ON	TVG2 at OFF
Response time ms	Two 3-port valves integrated		15	25	20	37
	2-position	Single	15	20	22	24
		Double	15	15	26	26
	3-position		20	30	25	35

The response times are values with supply pressure of 0.5 MPa at 20°C and without lubrication. They depend on the pressure and the lubricant quality.

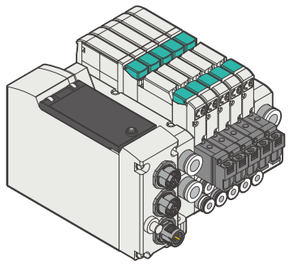
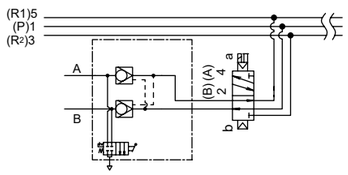
Spacer Pilot Check Valve



Specifications

Item		TVG1P-PC-P4
Operating Fluid		Compressed Air
Maximum Operating Pressure	MPa	0.7
Min. working pressure	MPa	0.2
Proof Pressure	MPa	1.05
Ambient Temperature	°C	−5 to 55 (no freezing)
Working fluid temperature	°C	5 to 55
Atmosphere		Cannot be used in corrosive gas environment.
Weight	g	34

Circuit Diagram Symbol



Discrete model No.

TVG1P − PC − P4

Spacer Pilot Check Valve

*** Residual pressure release function is not available.**

Note) Please note that if you use cylinders with a large bore (guideline ø50 or more) in a state with almost no throttling on the exhaust side (e.g., without a speed controller or silencer), this may lead to a decrease in intermediate stop accuracy and intermediate stop failure.

Notes for model No. Selection

*1: Specify the spacer positions in the manifold specifications sheet.
*2: If the port A/B Fittings is elbow (upward), a spacer cannot be selected.
*3: Stacking of spacers is not possible.
*4: A spacer cannot be combined with a blanking plate.
*5: A spacer mounting screw and gasket are included.

Intermediate supply and exhaust block

The intermediate supply and exhaust block can be installed between the valve block and the valve block.
These blocks cannot be adjacent to each other. In addition, this block cannot be adjacent to an end block or wiring block.
The electrical internal wiring and the P.R.PA.PR port connect to the adjacent blocks.

10 mm Width: **TVG1P - Q B - 08CS - ( ) - P4**

16 mm Width: **TVG2P - Q B - 10CS - ( ) - P4**

(Valve width)

❶ Model No. ❷ Piping direction ❸ Connection Port Size ❹ Pilot operated

❷ **Piping direction**

Code	Content
B	Side piping

❸ **Connection Port Size**

Code	Content	❶ Model No. TVG1P	❶ Model No. TVG2P
Metric fitting			
06CS	ø6 Push-in fitting	●	
08CS	ø8 Push-in fitting	●	●
10CS	ø10 Push-in fitting		●

*1: A filter is built into port P to prevent foreign matter from entering.

❹ **Pilot operated**

	Code	Content
	Blank	Internal pilot
*1, *2	K	External pilot
	Z	Multi-pressure circuit
*1, *2	KZ	External pilot (PA/PR separated)

*1: ❸Cannot be selected for port size "00XX".
*2: The external pilot port is a ø6-push-in fitting.
*3: Z cannot be used independently. Be sure to use with another type, blank, K and KZ.

Attached Parts

Manifold gasket: 1 pcs

Tie rod is not included, so order separately.
Refer to page 113 for details. The gasket between blocks is included.

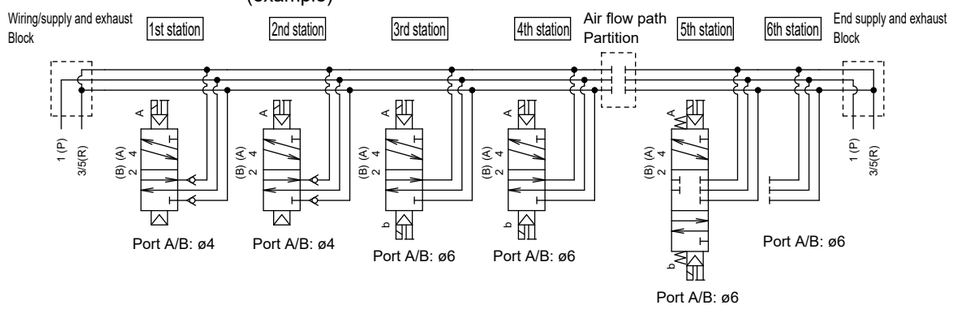
*1: KZ is selected, select KZ for both U and D sides. Select Z or KZ for intermediate supply and exhaust block.

- Complete from the left end, with the piping port facing forward.
  (Write the block model numbers and positions you determined referring to the block configurations (pages 37 to 38).)
- Write the total number of blocks specified in the quantity field in the table far right.
- Indicate for the○required attached parts.
- As there are manifold specifications sheets for each model No., fill in the form for the corresponding specifications.

Reference circuit diagram — Simplified circuit diagram of manifold model No. (example)



● Mounting rail length (L_5) of DIN rail mount

①Determine the rail length using the calculation method shown below.
The obtained length is standard.
②For standard length, length (L_5) is not required on the specifications sheet.
If you need a length other than the standard length, please enter it.

● How to determine the length of the mounting rail

Manifold length (L_4) = (A × Valve Block Quantity) + (B × Intermediate supply and exhaust Block Quantity) + C + D

Mounting rail length (L_5) = $L_{5'}$ × 12.5 A, B, C, and D indicate the length (width) of each block.

$$L_5 \quad \frac{L_4 + 40}{12.5} \rightarrow \text{round up to integer}$$

Rail mounting pitch (L_6) = L5-12.5

Block length (width) dimensions table (mm)

			TVG1	TVG2
A	Valve block		10.5	16
B	Intermediate supply and exhaust block		16	18
C	Wiring block	EA1□	110	112
		FA1□	91.2	93.2
		GA1□	87.2	89.2
		J□□□	74.1	76.1
D	End block		40.2	42.2

● Mounting rail length quick reference table

Standard system table

1. Common exhaust

Series	Solenoid valve port size	System No.	Speed Controller	Cylinder piping Pipe length 1 m	Common exhaust piping	Composite effective sectional area (mm²)
TVG1	C4	A1	SC3W-M5-4	ø4 x ø2.5	ø8 × ø6×3m	1.0
	C6	A2	SC3W-6-6	ø6 x ø4	ø8 × ø6×3m	2.7
	C6	A3	SC1-8	ø6 x ø4	ø8 × ø6×3m	3.8
TVG2	C6	B1	SC1-8	ø6 x ø4	ø10× ø7.5×3m	4.9
	C8	B2	SC1-8	ø8 x ø6	ø10× ø7.5×3m	7.5
	C10	B3	SC1-10	ø10 x ø7.5	ø10× ø7.5×3m	9.3

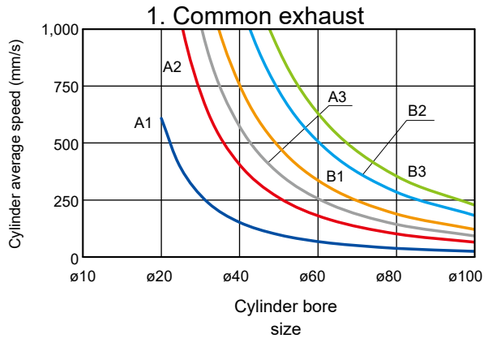
2. Atmospheric release exhaust (silencer integrated)

Series	Solenoid valve port size	System No.	Speed Controller	Cylinder piping Pipe length 1 m	End supply and exhaust block	Composite effective sectional area (mm²)
TVG1	T1 2	T1 2	SC3W-M5-4	ø4 x ø2.5	TVG1P-EB-08CS-X	1.0
	C6	A5	SC3W-6-6	ø6 x ø4		2.8
	C6	A6	SC1-8	ø6 x ø4		4.1
TVG2	C6	B4	SC1-8	ø6 x ø4	TVG2P-EB-10CS-X	5.1
	C8	B5	SC1-8	ø8 x ø6		8.2
	C10	T1 2	SC1-10	ø10 x ø7.5		10.8

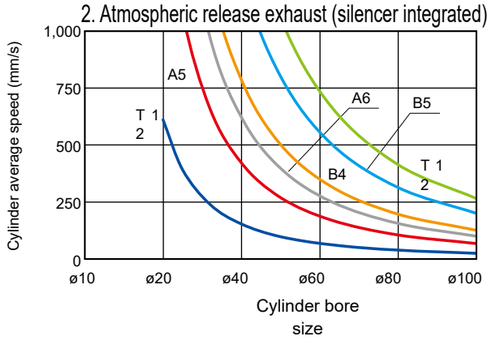
3. Exhaust with silencer

Series	Solenoid valve port size	System No.	Speed Controller	Cylinder piping Pipe length 1 m	Silencer	Composite effective sectional area (mm²)
TVG1	C4	A7	SC3W-M5-4	ø4 x ø2.5	SLW-H8	1.0
	C6	A8	SC3W-6-6	ø6 x ø4		2.6
	C6	A9	SC1-8	ø6 x ø4		3.7
TVG2	C6	B7	SC1-8	ø6 x ø4	SLW-H10	4.9
	C8	B8	SC1-8	ø8 x ø6		7.4
	C10	B9	SC1-10	ø10 x ø7.5		9.2

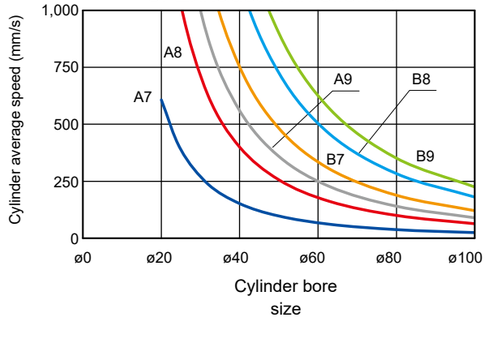
1. Common exhaust



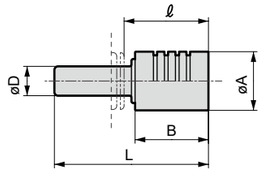
2. Atmospheric release exhaust (silencer integrated)



3. Exhaust with silencer



●Silencer



Model No.	D	L	A	B	ℓ
SLW-H8	ø8	42	16	20	23
SLW-H10	ø10	53	20	27	31.5

Device selection guide is used to select the optimum model at a glance.

● Fluid control components selection

Whether the cylinder bore size and cylinder being used are driven with relative high or low speed is determined as a condition. Using the table shown below as a reference, select the theoretical reference speed of the cylinder.

Degree of cylinder speed	Theoretical reference speed (mm/s)
Low speed	250
Medium speed	500
High speed	750
Ultra high speed	1,000

Components selection guide 1 table (P. 141) Select the equivalent bore size of cylinder tube and the proper standard system No. corresponding to theoretical reference speed.

● Theoretical reference speed: Indicates the degree of cylinder speed, expressed as the following formula. (This value matches speed with no load. When load is applied, speed drops considerably.)

$$vo=1920\times\frac{S}{A}=2445\times\frac{S}{D^2} \quad \text{——————} \quad (1)$$

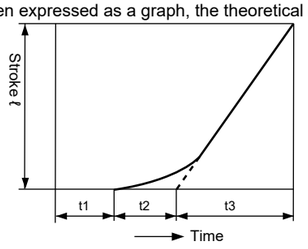
vo: Theoretical reference speed (mm/s)

(A) Cylinder sectional area (cm^2)

S: Composite effective cross-sectional area of circuit (exhaust air side) (mm^2)

D: Cylinder bore size (cm)

When expressed as a graph, the theoretical reference speed is the speed within the range where the cylinder moves at a uniform speed:



$$vo=\frac{\ell}{t3}\ (mm/s)$$

t1: Time until movement starts

t2: Time of primary delay

t3: Operating time with constant velocity

ℓ Stroke

● Note: t1 and t2 differ depending on load. Can be effectively ignored with no load.

● Required flow rate: Instantaneous flow rate for operating a cylinder with velocity vo, expressed with the following formula. Values in the table are when P = 0.5 MPa. The required flow rate is a value necessary to select clean air system components.

$$Q=\frac{Avo\ (P+0.101)\times 60}{0.101\times 104} \quad \text{——————} \quad (2)$$

Q: Required flow rate (ℓ/min) (ANR)

P: Supply Pressure (MPa)

● Required effective sectional area: Composite effective cross-sectional area for the exhaust circuit required for moving the cylinder at speed vo. (Composite effective cross-sectional area of solenoid valve, speed controller, silencer or piping) The ratio of the effective cross-sectional area S and sonic conductance C is S≈5.0×C.

● Proper standard system: The most appropriate combination of solenoid valve, speed controller, silencer and bore size for operating a cylinder with velocity vo. The combination in the table is for a pipe length of 1 m.

Expressed as follows using practical units.

$\frac{P_2+0.1}{P_1+0.1}$ When ≤ b, Choked flow

$$Q=600\times C(P_1+0.1)\sqrt{\frac{293}{273+t}} \quad .....(1)$$

$\frac{P_2+0.1}{P_1+0.1}$ When > b, subsonic flow

$$Q=600\times C\ (P_1+0.1)\sqrt{1-\left(\frac{\frac{P_2+0.1}{P_1+0.1}-b}{1-b}\right)^2}\sqrt{\frac{293}{273+t}} \quad .....(2)$$

Q: Air flow rate [dm^3/min(ANR)], SI unit dm^3 (cubic decimeter) can also be expressed with ℓ (liter). 1 dm^3 = 1 ℓ

C: Sonic conductance [dm^3/(s/bar)]

b: Critical pressure ratio [−]

P1: Upstream pressure [MPa]

P2: Downstream pressure [MPa]

t: Temperature [°C]

When calculating using the effective area S, substitute the value C obtained from C = S/5 into the above formula.

For subsonic flow, substitute b = 0.5 into formula (2).

Note) Max. flow rate: For F.R.L., FR and R, flow rate at 0.7 MPa primary pressure, 0.5 MPa set pressure, 0.1 MPa pressure drop. For air filter, flow rate at 0.7 MPa primary pressure, 0.02 MPa pressure drop. For lubricator, flow rate at 0.5 MPa primary pressure, 0.03 MPa pressure.

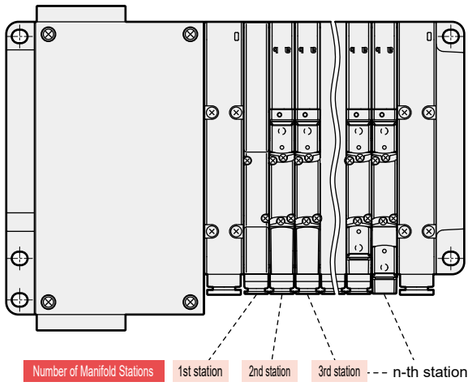
MEMO

Common terminal block (wiring method EA1A, EA1B)

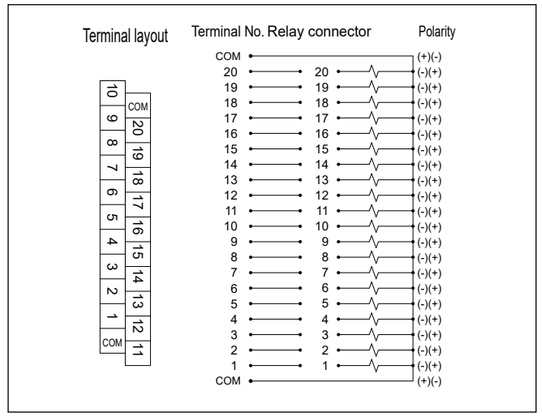
Notes on wiring

[Precautions for common terminal box (EA1*)]

①With the common terminal box, the common wiring is internal processed beforehand. When using the independent contact PLC output unit, wire the common wires at the contact section.
②Check the correspondence of the number of stations with solenoid positions to prevent incorrect wiring. (Refer to the table below.)
③Note that the correspondence will not function if the number of solenoid stations exceeds 20.
④The manifold station numbers are set in order from left with the piping port facing forward.
⑤A voltage drop may occur due to simultaneous energizing or cable length. Confirm that the voltage drop for the solenoid is within 10% of the rated voltage.



Wiring method Internal wiring of EA1 * (up to 20 solenoid stations)



Terminal array of wiring method EA1* (example)

*1: Valve No. 1a, 1b, 2a, 2b...The numbers in indicate the 1st and 2nd stations, and the letters a and b indicate the a side solenoid and the b side solenoid. The manifold's max. station number differs depending on the model. Check the specifications of each model.
*2: When using a single solenoid with standard wiring (double wiring), applying power to the (empty) part of the table below will light up the operation lamp. However, this is not an abnormality.

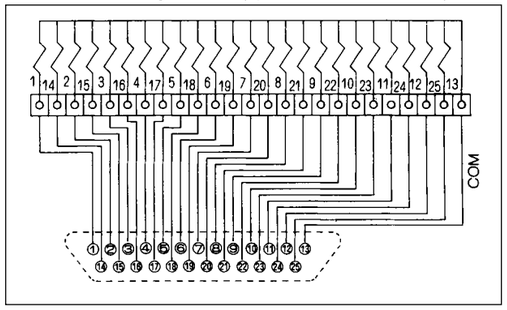
D-sub-connector (wiring method GA1A, GA1B)

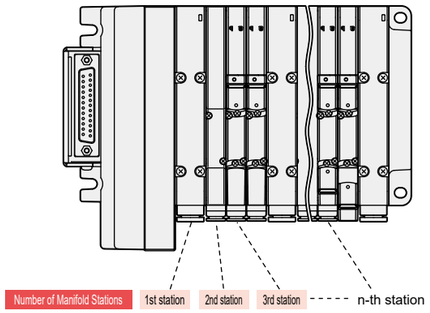
Notes on wiring

[GA1* connector]
The connector used for GA1* wiring, called a D-sub-connector, is used widely for FA and OA components components. 25P in particular is also an RS-232-C Standards designated connector, used for personal computer communication. The manifold station numbers are set in order from left with the piping port facing forward.

[Precautions for connector GA1*]
①Signal arrays of the PLC output unit must match signal arrays on the valve side.
②The working power is 24 VDC dedicated.
③A voltage drop may occur due to simultaneous energizing or cable length. Confirm that the voltage drop for the solenoid is within 10% of the rated voltage.

Internal wiring of GA1 * (up to 24 solenoid stations)

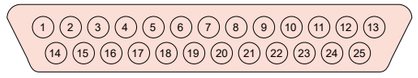




GA1 * connector pin array (example)

*1:The numbers on valves No. 1a, 1b, 2a, 2b ... indicate the 1st and 2nd stations, and alphabets "a" and "b" indicate the "a" side and "b" side solenoids. The manifold's max. station number differs depending on the model. Check the specifications of each model.
*2: When using a single solenoid with standard wiring (double wiring), applying power to the (empty) part of the table below will light up the operation lamp. However, this is not an abnormality.

Connector pin No.



[Standard wiring (double wiring)]

● For single solenoid valve

(MF station No. max. 12 stations)

Pin No.	1	2	3	4	5	6	7	8	9	10	11	12	13

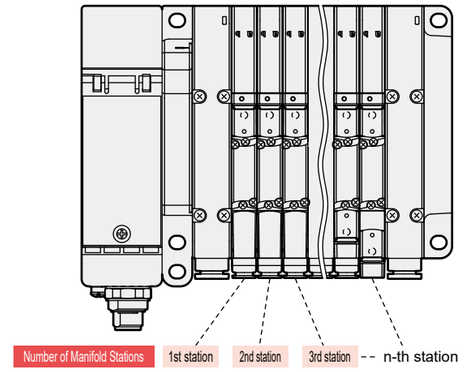
Serial transmission: Wiring Method

J** serial transmission

- The device unit's output No. differs with the manufacturer. The internal connector pin No. and the manifold solenoid correspond as shown below.
- The manifold station numbers are set in order from left with the piping port facing forward regardless of the wiring block position.
- Internal connectors are wired in order, so there may be some blank numbers depending on the number of stations. These blank outputs cannot be used to drive other than the solenoid manifolds in use.
- The working power is 24 VDC dedicated.
- Securely fix the attached connector with fixing screws. (Proper tightening torque 0.3 N·m)



Valve No. Arrangement Corresponding to Solenoid Output No. for Wiring Method J□□ (Example)

*: Valve No.1a, 1b, 2a, 2b,...The numbers in indicate the 1st and 2nd stations, and the letters a and b indicate the a side solenoid and the b side solenoid. The manifold's max. station number differs depending on the model. Check the specifications of each model.

[Standard wiring (double wiring)]

Connection method

Wiring structure between wiring block and valve block

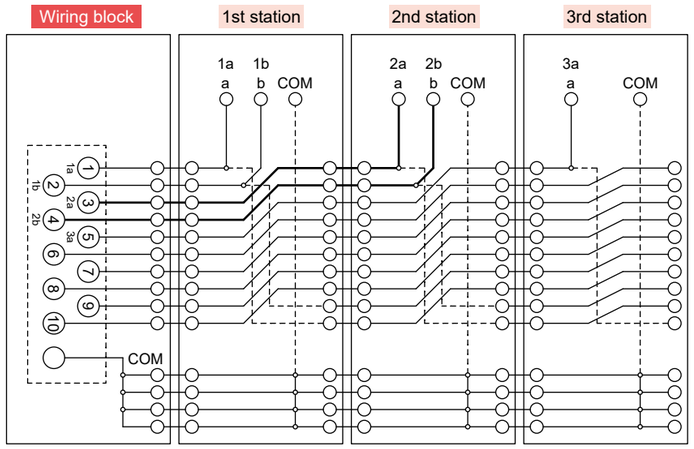
A part called a dedicated wiring connector is built into the valve block and intermediate supply and exhaust block, etc., This structure enables the wiring to be completed simultaneously with the disassembly and assembly of the block manifold. Special wiring work is not required during disassembly and assembly. There is regularity to the wiring block terminal block numbers and solenoid output numbers and wired valves. Refer to the section on the wiring method of each wiring block, and connect the wires between the valves and control equipment. Take special care when increasing or decreasing the number of valve blocks. In addition, an example of the wiring circuit when expanding stations is shown below.

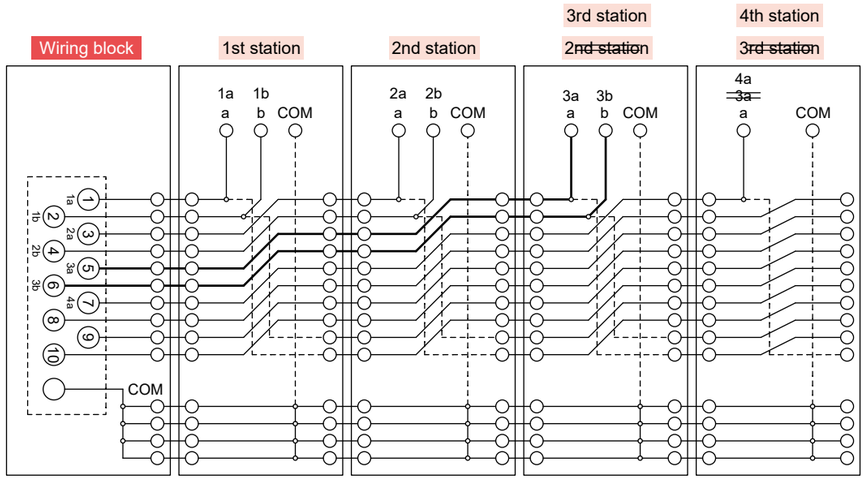
Example of wiring circuit

The diagram below shows the wiring circuit for TVG and differs from the actual specifications.

Standard wiring (double wiring)

When one station of a valve block has been expanded between the 2nd and 3rd station, the output that had been assigned to terminal block No.5 and No.6 of the wiring block will automatically shift for two solenoids and be assigned to terminal block No.7 and No.8.



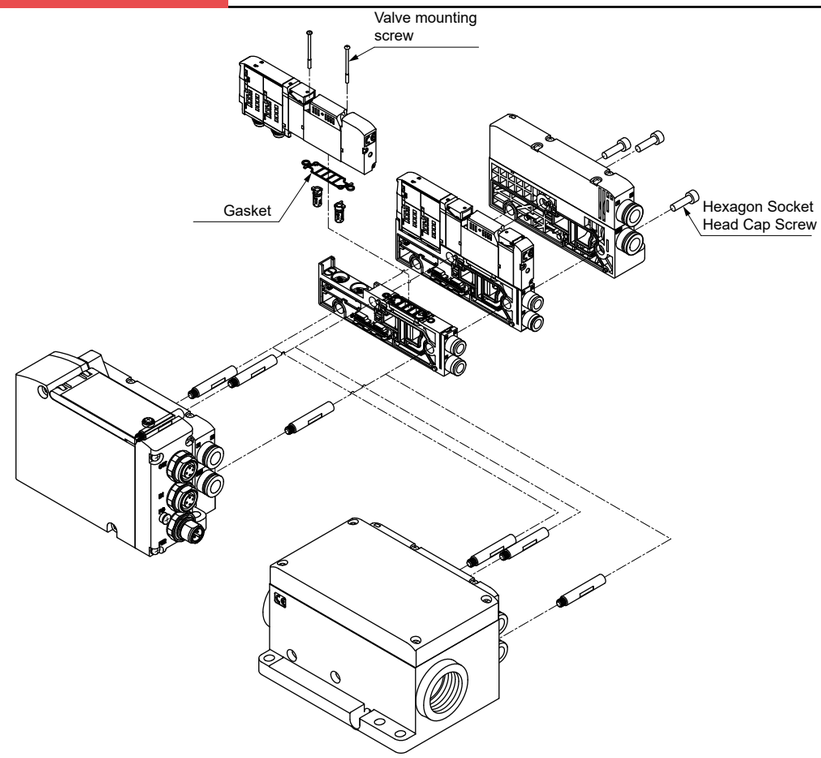


*For standard wiring (double wiring) When all points of the single solenoid valve are ON by a communication device unit, etc., the b side lamp lights because the operation lamp is built into the manifold base. However, this is not an error.

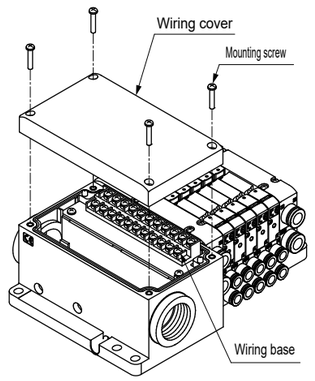
Single/Double mixed wiring

Similar to double wiring, the terminal block numbers will shift assignments. However, how they shift will depend on the solenoid valve. With types having one solenoid valve (2-position single), they shift for one valve position. With types having two solenoid valves (2-position double / 3-position), they shift for two valve positions.

Exploded view of block manifold



Removing the wiring cover



Increasing the valve blocks

①Remove the hexagon socket head cap screw.
②Remove all valve blocks and remove tie rods.
③Install a tie rod for the expansion stations to the wiring block. Be sure to install tie * to increase the number of stations on the wiring block. Install the original tie rod on the right side of the tie rod for the units being increased.
④Confirm that the gasket is flat in the groove and mount the valve block.
⑤Press so that there is no gap between blocks, and fasten with the hexagon socket head cap screw. Tightening Torque 1.1 to 1.3 N·m)

* Be sure to mount the tie rod before mounting the valve block.
* Take special care to prevent the gasket from getting caught in between blocks.

Replacing valves

Removing method

①Loosen the mounting screws (2-positions).
②Remove the valve from the valve block.

Installation method

Follow the removal procedure in reverse. Refer to the table below for the recommended tightening torque for the mounting screws.

Recommended tightening torque for the valve mounting screw

Model	Thread Size	Proper tightening torque (N·m)
TVG1	M1.7	0.19 to 0.21
TVG2	M2.5	0.35 to 0.40

Safety Precautions

Be sure to read this section before use.

When designing and manufacturing a device using CKD products, the manufacturer is obligated to check that device safety mechanism, pneumatic control circuit, or water control circuit and the system operated by electrical control that controls the devices is secured.
It is important to select, use, handle and maintain the product appropriately to ensure that the CKD product is used safely.
Observe warnings and precautions to ensure device safety.
Check that device safety is ensured, and manufacture a safe device.

WARNING

1 This product is designed and manufactured as a general industrial machine part.
It must be handled by an operator having sufficient knowledge and experience.

2 Use this product in accordance with specifications.
This product must be used within its stated specifications. In addition, never modify or additionally machine this product.
This product is intended for use in general industrial machinery equipment or parts. It is not intended for use outdoors (except for products with outdoor specifications) or for use under the following conditions or environments.
(Note that this product can be used when CKD is consulted prior to its usage and the customer consents to CKD product specifications. The customer should provide safety measures to avoid danger in the event of problems.)
❶ Use for applications requiring safety, including nuclear energy, railways, aircraft, marine vessels, vehicles, medical devices, devices or applications in contact with beverages or foodstuffs, amusement devices, emergency cutoff circuits, press machines, brake circuits, or safety devices or applications.
❷ Use for applications where life or assets could be significantly affected, and special safety measures are required.

3 Observe organization standards and regulations, etc., related to the safety of device design and control, etc.
ISO4414, JIS B 8370 (Pneumatics fluid power - General rules and safety requirements for systems and their components)
JFPS2008 (Principles for pneumatic cylinder selection and use)
Including the High Pressure Gas Safety Act, Industrial Safety and Health Act, other safety rules, organization standards and regulations, etc.

4 Do not handle, pipe, or remove devices before confirming safety.
❶ Inspect and service the machine and devices after confirming safety of all systems related to this product.
❷ Note that there may be hot or charged sections even after operation is stopped.
❸ When inspecting or servicing the device, turn OFF the energy source (air supply or water supply), and turn OFF power to the facility.Discharge any compressed air from the system, and pay attention to possible water leakage and leakage of electricity.
❹ When starting or restarting a machine or device that incorporates pneumatic components, make sure that the system safety, such as pop-out prevention measures, is secured.

5 Observe warnings and cautions in the following pages to prevent accidents.

■ The precautions are ranked as "DANGER", "WARNING" and "CAUTION" in this section.

DANGER: When a dangerous situation may occur if handling is mistaken leading to fatal or serious injuries, and when there is a high degree of emergency to a warning.

WARNING: If handled incorrectly, a dangerous situation may occur, resulting in death or serious injury.

CAUTION: When a dangerous situation may occur if handling is mistaken leading to minor injuries or physical damage.

Note that some items described as "CAUTION" may lead to serious results depending on the situation.
Every item provides important information and must be observed.

Warranty

1 Warranty period
The product specified herein is warranted for one (1) year from the date of delivery to the location specified by the customer.

2 Warranty coverage
If the product specified herein fails for reasons attributable to CKD within the warranty period specified above, CKD will promptly provide a replacement for the faulty product or a part thereof or repair the faulty product at one of CKD's facilities free of charge.
However, following failures are excluded from this warranty:
1) Failure caused by handling or use of the product under conditions and in environments not conforming to those stated in the catalog, the Specifications, or the Instruction Manual.
2) Failure caused by use of the product exceeding its durability (cycles, distance, time, etc.) or caused by consumable parts.
3) Failure not caused by the product.
4) Failure caused by use not intended for the product.
5) Failure caused by modifications/alterations or repairs not carried out by CKD.
6) Failure caused by reasons unforeseen at the level of technology available at the time of delivery.
7) Failure caused by acts of nature and disasters beyond control of CKD.
The warranty stated herein covers only the delivered product itself. Any loss or damage induced by failure of the delivered product is excluded from this warranty.
Note: For details on the durability and consumable parts, contact your nearest CKD sales office.

3 Compatibility check
The customer is responsible for confirming the compatibility of CKD products with the customer's systems, machines and equipment.

Pneumatic Equipment

To Use This Product Safely

Be sure to read this before use.
Refer to "Pneumatic Valves (No. CB-023SAA)" for general precautions on valves.

Individual Precautions: Plug-in valve TVG Series

Design / Selection

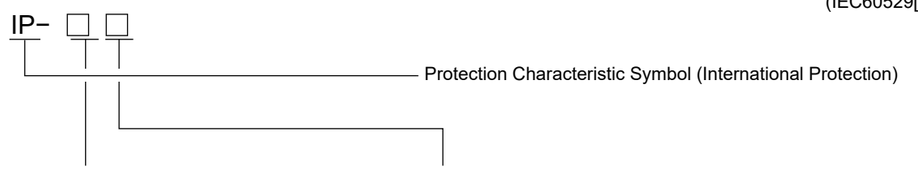
1. Operating Environment

Caution

Avoid use in conditions where water, cutting oil, or dust directly contacts the valve.
Note that even IP67-compliant products cannot be used under water.
With the type with built-in silencer, make sure that water does not come directly to the exhaust port.
IP65 and IP67 use the following standard test method.
■IEC(Intemational Electrotechnical Commission: IEC60529:2001)
■JIS C 0920:2003

Description of protection characteristic codes and test methods for IP65 and IP67

■IEC(Intemational Electrotechnical Commission: International Electrotechnical Commission standards (IEC60529[IEC60529:2001])



First Characteristic Numeral (Degree of protection against external solid objects)

Grade	Degree of Protection	
6	Dust-tight type 	No inflow of dust.

2nd characteristic No. (degree of protection for water entry)

Grade	Degree of Protection		Overview of test method (fresh water is used)
5	Protection against water jets 	Does not cause harmful effects from water jetted by a nozzle from any direction.	Using the test apparatus shown below, spray water from all directions onto the product under test (enclosure) for 1 minute per 1 m² of surface area for a total of at least 3 minutes.  Water discharge nozzle bore size: ø6.3 mm
7	Protection against immer-sion in water 	When the exterior is temporarily sub-merged in water at a specified pressure and time, there is no entry of water that could cause harmful effects.	Soak in 1 m of water for 30 minutes.

2. Serial transmission device unit

Caution

■When a communication error state occurs, the device station will be in the following state.
①All input signals are OFF.
②All output signals are OFF. (However, if the device unit has an output mode setting switch, it enters the set status.)

3. Surge suppressor

Caution

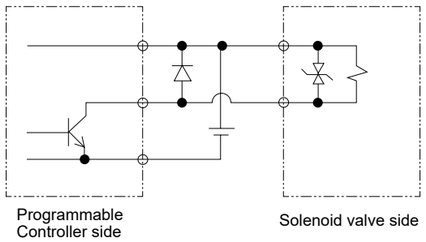
■ The surge suppressor included with the solenoid valve aims to protect the output contact for driving the solenoid valve. There is no protection for other peripheral devices, and those devices may be damaged or malfunction by a surge. The suppressor absorbs a surge voltage generated by other devices, and burns itself out protecting the output contact. The following points must be taken into consideration.

①The surge suppressor functions to limit solenoid valve surge voltage, which can reach several hundred volts, to a low voltage level that the output contact can withstand. Depending on the output circuit used, this may be insufficient and could result in damage or malfunction. Confirm in advance whether the surge suppressor is suitable for the withstand voltage of both the solenoid valve in use and the output device, circuit structure and the degree of return delay time. When necessary, provide other surge countermeasures. The solenoid valve with surge suppressor can suppress the inverse voltage surge that may occur when the solenoid valve is OFF to the level in the table below.

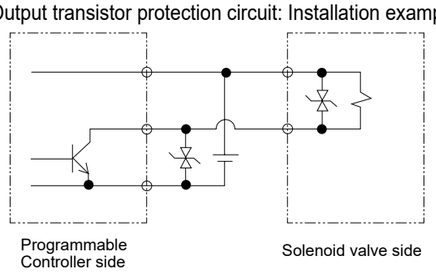
Specification voltage	Inverse voltage when OFF
24 VDC	Approx. 47 V

②When the output unit is NPN type, the output transistor may be subject to a surge voltage equivalent to the voltage + power supply voltage shown in the above table. Please provide a contact protection circuit.

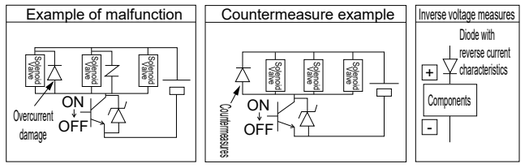
[Output transistor protection circuit: Installation example 1]



[Output transistor protection circuit: Installation example 2]



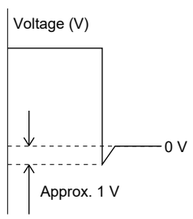
③If another device or solenoid valve is connected in parallel to the solenoid valve, the inverse voltage surge generated when the solenoid valve is OFF would apply to those devices. Even in the case of a solenoid valve with 24VDC surge suppressor, a surge voltage may reach negative tens of volts for some models. This inverse voltage may cause damage or malfunction to other parallel connected components. A components that is susceptible to inverse polarity voltages (example: Avoid parallel connection with the LED indicator lamp. When driving several solenoid valves in parallel, the surge from other solenoid valves may enter the surge suppressor of one solenoid valve, and it may burn depending on the current value. When driving several solenoid valves with surge suppressors in parallel, surge current could concentrate at the surge suppressor with the lowest voltage limit and cause similar burning. Even if the solenoid valve is the same, the surge suppressor's voltage limit can be inconsistent, and in the worst case, could result in burning. Avoid driving multiple solenoid valves in parallel.



④The surge suppressor incorporated in the solenoid valve will often be short-circuited if it is damaged by an overvoltage or overcurrent from other solenoid valves. Where there is a failed surge suppressor, if a large current flows when the output is ON, in the worst case scenario, the output circuit or solenoid valve could be damaged or ignited. Do not continue energizing the solenoid valve if the surge suppressor becomes faulty. Additionally, to prevent large currents from continuing to flow, connect an overcurrent protection circuit to the power supply and drive circuit, or use a power supply with overcurrent protection.

4. Surgeless type

■ Surgeless type reduces the solenoid valve surge voltage up to 1 V approx. by the built-in diode. In addition, there is no polarity.



■ The built-in diode of the surgeless type may be damaged by an open/close surge such as a reed relay or switch. Provide measures for open/close surges, such as proximity relay or surge absorber.

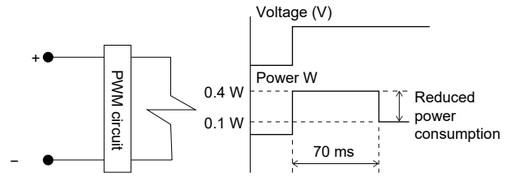
5. Low exoergic/energy saving circuit

■ The Low exoergic/energy saving circuit includes a PWM circuit in the solenoid valve, which is designed to reduce the current value when the coil is held with suction.

Power consumption is reduced to 1/4 compared to Standard Products.

[Specifications for Low exoergic/energy saving circuit]

Item		Current A	Power consumption W
During Startup	24 VDC	0.017	0.4
During Holding	24 VDC	0.008	0.1



Caution

■ Do not use this valve in an environment where vibration and impact exceed the specified range. This may result in valve malfunction.

■ The energized state cannot be maintained if power is cut off instantaneously for 30 ms or less on the power source driving the solenoid valve. If any disturbance has caused up to 30 ms instantaneous power cut-off of the solenoid valve after being continuously energized, cut the power OFF for 50 ms or more before switching the solenoid valve ON again.

■ Do not use this product by gradually raising the voltage. The valve will not operate.

■ With the type with low exoergic/energy circuit, the built-in diode may be damaged by the open/close surge of the reed relay or switch. Provide measures for open/close surges, such as proximity relay or surge absorber.

6. When using the product in combination with low friction cylinders

■ Malfunctions could occur because of the exhaust pressure. Contact CKD.

7. When using the product at vacuum

■ Select the external pilot. Supply compressed air of 0.2 to 0.7 MPa to the external pilot port (port PA) and connect negative pressure to the supply port (port P) before use.

■ Use under low vacuum conditions.

8. Connecting vacuum generating components (ex. blower) to the exhaust port

■ Check that differential pressure between exhaust port and supply port is 0.7 MPa or less. If the differential pressure is large, it may cause malfunction.

■ Use the external pilot PA/PR separated (kZ).

■ Do not connect port PR to a vacuum generating components such as a blower.

9. Degree of protection IP65 and IP67

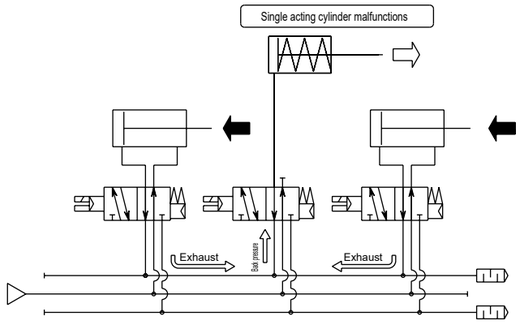
■ The TVG Series supports IP65 and IP67 as standard, and is protected from dust and water, but cannot be used immersed in water. Countermeasures such as a protective cover for the unit should also be taken if using in environments where it will be constantly exposed to dust or water.

Exhaust check valve

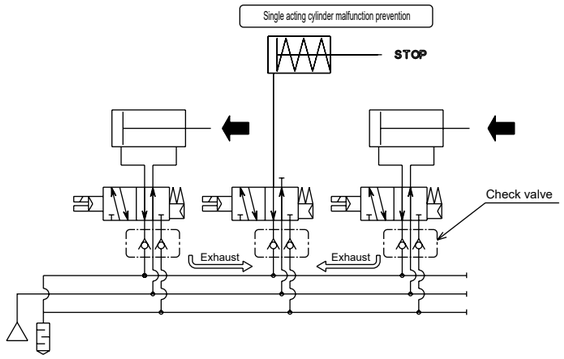
Caution: The exhaust check valve is a check valve. Note that if the cylinder rod is manually operated directly without pressurization, the check valve opens and the cylinder rod does not move. Check valve blocks back pressure from adjacent air components, etc. The structure does not permit continuous pressure holding, so do not use for purposes other than blocking back pressure.

Generally, the double acting cylinder connected at the manifold to single acting cylinders or exhaust center valves may malfunction when adversely affected by the exhaust pressure led in by operation of other cylinders. For the manifold of TVG Series, the "exhaust check valve" integrated to prevent this malfunction can be selected, except for closed center valves and pressure center valves. However, with components that are affected by a small amount of leakage or pressure of low friction cylinders, etc., the functions may not operate properly.

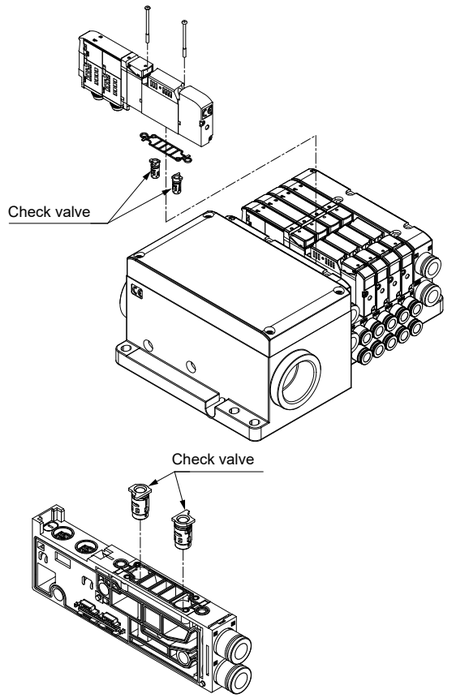
Example of pneumatic pressure system that may malfunction



TVG Series pneumatic pressure system



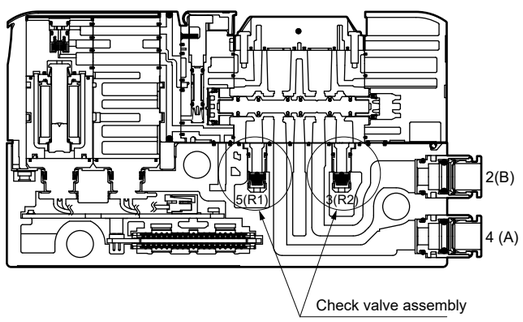
Internal Structure Diagram



Check valve equipped standard specifications

Model No.	Flow path switching	Option (H) selection
TVG*-1	2-position single	Yes
TVG*-2	2-position double	Yes
TVG*-3	3-position closed center	None
TVG*-4	3-position exhaust center	Yes
TVG*-5	3-position pressure center	None
TVG*-A	A valve side: Normally Closed B valve side: Normally Closed	Yes
TVG*-B	A valve side: Normally Open B valve side: Normally Open	Yes
TVG*-C	A valve side: Normally Closed B valve side: Normally Open	Yes

Because the 3-position closed center and pressure center are not adversely affected by the exhaust pressure led in from other cylinders at the neutral position, check valves are not required.



For cautions about mounting, installation, adjustment, use, and maintenance, refer to CKD components Product Site (https://www.ckd.co.jp/kiki/jp/) → "Model No." Instruction Manuals .

Related Products

Remote I/O RT Series

Catalog No.CC-1557AA

- Modular waterproof compatible with digital I/O, analog I/O and IO-Link master.
- Max. device unit control points: 512 bytes (4096 points).
- Max. connection units 18 (including device unit units).

IO-Link Wireless input unit WD Series

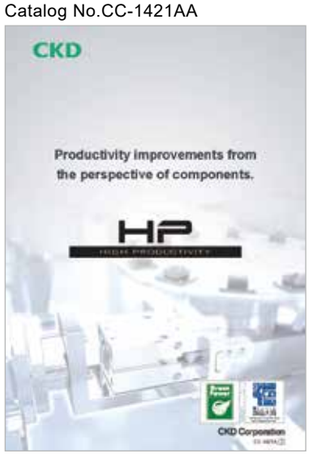
Catalog No.CC-1629AA

IO-Link Wireless compatible wireless input unit

- Error rate: 1/1 billion
  Supports wired-like, uninterrupted IO-Link Wireless
- Digital input 16 point input
- Enables wireless wiring of ON/OFF switches, including cylinder switches
- Lightweight and compact business card size that is easy to install in movable parts such as Robot End-of-Arms

HP Series General Catalog

Catalog No.CC-1421AA



- Actuator for high frequency use (HP1)
  Optimized sliding technology for longer service life with the same dimensions as conventional products (more than 4-fold compared to conventional products)
- Actuator for dusty environments (G-HP1)
  Equipped with a strong scraper and lube keeper for improved durability in dusty environments (4 times more durable than conventional models)
- Actuator with length measuring function (HP2)
  Integrated high-precision position detection sensor for predictive maintenance
- Long service life cylinder Compatible with rechargeable batteries (P4-HP1)
  Extended service life of P4 Series, which has track records in the rechargeable battery manufacturing process (durability count of 10 million cycles or more)
- Environment-resistant cylinder For food manufacturing processes (FP1-G-HP1)
  Long service life in dusty environments in food manufacturing processes (durability count of 5 million cycles or more)
