

## Rodless cylinder with brake (SRT3) selection guide

## [STEP1]

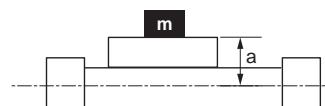

Moment actuates according to the cylinder mounting direction and the position of center of gravity of load.

- Types of moment caused by load

[Table 1] Value of a

Bore size	a(m)
ø12	0.023
ø16	0.025
ø20	0.028
ø25	0.036
ø32	0.039
ø40	0.045
ø50	0.054
ø63	0.060

## 1 Obtain the static moment.

Mounting orientation	Horizontal upward	Horizontal downward	Horizontal lateral	Vertical
	mx9.8			
Vertical load W				-
M1	Wxℓ₁	Wxℓ₁	-	Wx(ℓ₃+a)
M2	Wxℓ₂	Wxℓ₂	Wx(ℓ₃+a)	-
M3	-	-	Wxℓ₁	Wxℓ₂

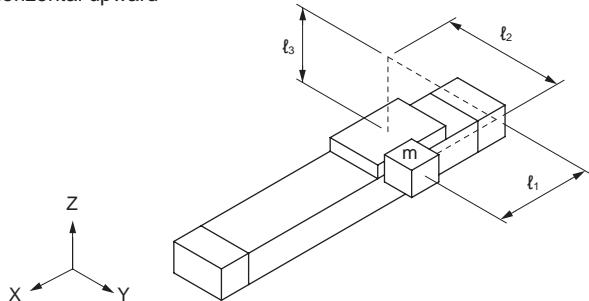

m : Load weight [kg]

ℓ₁ : Length along the stroke direction from the center of table to the center of gravity of load [m]

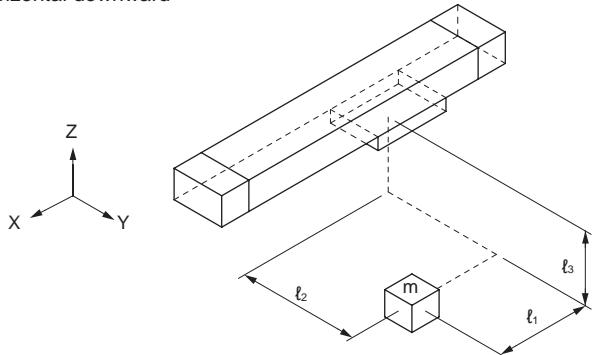

ℓ₂ : Length in the width direction from the center of table to the center of gravity of load [m]

ℓ₃ : Length in the vertical direction from the center of table to the center of gravity of load [m]

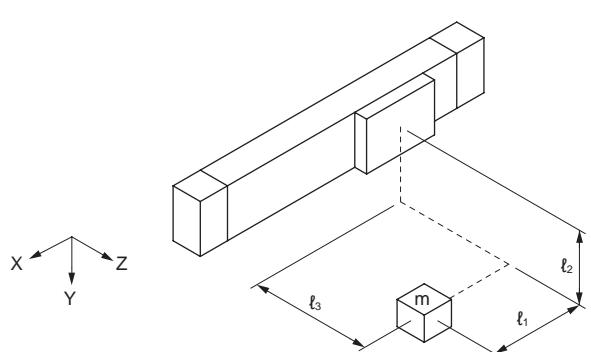

## Horizontal upward

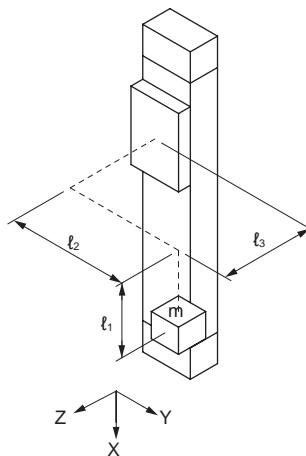

## Horizontal downward

## Horizontal lateral

## Vertical

- 2 Obtain the dynamic moment caused by the load inertia at the stroke end.

Unit: N·m				
Mounting orientation	Horizontal upward	Horizontal downward	Vertical	Horizontal lateral
Dynamic moment	<b>M1i</b>	$Wx(l_3 + a)xG$		
	<b>M2i</b>	M2i dynamic moment is not generated.		
	<b>M3i</b>	$Wx\ell_2xG$		

Dynamic moment can be calculated with the formulas above regardless of the mounting direction.

Obtain an approximate G coefficient from Table 2.

[Table 2]  $V_a$  (Average speed) =  $\frac{\text{Moving distance}}{\text{Movement time}}$  (m/s)

<b>V<sub>a</sub> (Average speed) (m/s)</b>	<b>V<sub>m</sub> (stroke end speed) (m/s)</b>	<b>G Coefficient</b>
0.3	to 0.65	9
0.6	to 1.00	15
0.9	to 1.30	23
1.2	to 2.00	40

G Coefficient =

- 3 Select an approximate bore size.

Select an approximate bore size.

$$\begin{aligned} M1 + M1_i &= \boxed{\quad}(N \cdot m) \rightarrow (\varnothing \quad) \\ M2 &= \boxed{\quad}(N \cdot m) \rightarrow (\varnothing \quad) \\ M3 + M3_i &= \boxed{\quad}(N \cdot m) \rightarrow (\varnothing \quad) \\ W &= \boxed{\quad}(N) \rightarrow (\varnothing \quad) \\ E' = \frac{1}{2} xmxVm^2 &= \boxed{\quad}(J) \rightarrow (\varnothing \quad) \end{aligned}$$

Select a temporary max. bore size.

$\varnothing$

[Table 3] Allowable value

<b>Item</b>	<b>Wmax (N)</b>	<b>M1max (N·m)</b>	<b>M2max (N·m)</b>	<b>M3max (N·m)</b>
$\varnothing 12$	30	1.5	0.6	0.6
$\varnothing 16$	140	5	1	1
$\varnothing 20$	200	10	1.5	3
$\varnothing 25$	360	17	5	10
$\varnothing 32$	620	36	10	21
$\varnothing 40$	970	77	23	26
$\varnothing 50$	1470	154	32	42
$\varnothing 63$	2320	275	52	76

[Table 4] Allowable absorbed energy value ( $E_0$ )

<b>Bore size (mm)</b>	<b>Integrated air cushion (J)</b>
$\varnothing 12$	0.03
$\varnothing 16$	0.22
$\varnothing 20$	0.59
$\varnothing 25$	1.40
$\varnothing 32$	2.57
$\varnothing 40$	4.27
$\varnothing 50$	9.13
$\varnothing 63$	17.4

Note) SRT3 with shock absorber attached is not available.

Install an external shock absorber if the kinetic energy of load:  $E'$  is larger than the allowable absorbed energy:  $E_0$ .

**4 Obtain the resultant moment at the stroke end ( $M_T$ ).**

(Confirm that the bore size selected in **3** satisfies the formula below.)

$$M_T = \frac{M_1 + M_{1i}}{M_{1max}} + \frac{M_2}{M_{2max}} + \frac{M_3 + M_{3i}}{M_{3max}} + \frac{W}{W_{max}} < 1$$

M : Resultant moment (must be smaller than 1)

W<sub>max</sub> : Max. allowable value of W (from Table 3)

M<sub>1max</sub> : Max. allowable value of M<sub>1</sub> (from Table 3)

M<sub>2max</sub> : Max. allowable value of M<sub>2</sub> (from Table 3)

M<sub>3max</sub> : Max. allowable value of M<sub>3</sub> (from Table 3)

- If  $M_T$  is much more than 1, change the selection condition.
  - If  $M_T$  is slightly more than 1, improving the accuracy in STEP 2 may make the value 1 or less.
- Perform STEP 2 to see the result.

## [STEP2]

Next, obtain a more accurate load factor, effective thrust, stroke end speed and resultant moment.

● Calculate the load factor.

$$\alpha = \frac{F_0}{F} \times 100 [\%]$$

α : Load factor  
 $F_0$  : Force (N) required to move the workpiece  
 $F$  : Effective thrust of the cylinder (N) (Fig. 1 to 3)

For horizontal operation	For vertical operation
$F_0 = F_w + F_1 + F_2 + F_3 + F_L$	$F_0 = W + F_1 + F_2 + F_3 + F_L$
$F_w : W \times 0.2 (N)$	$F_1 : M_1 \times C_1 \text{ Note}(N)$
$F_2 : M_2 \times C_2 \text{ Note}(N)$	$F_3 : M_3 \times C_3 \text{ Note}(N)$
$F_L : \text{Other kinds of resistance (e.g., guide resistance)} (N)$	$W : \text{Load (N)}$

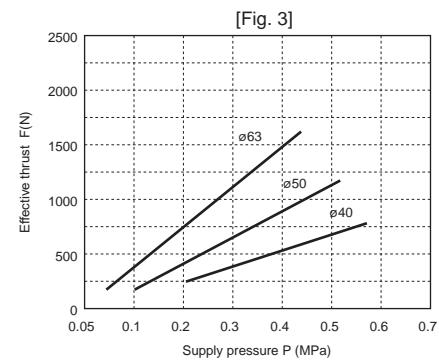

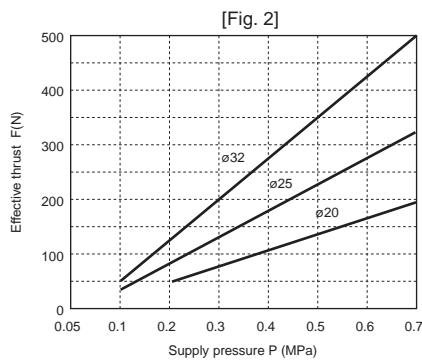

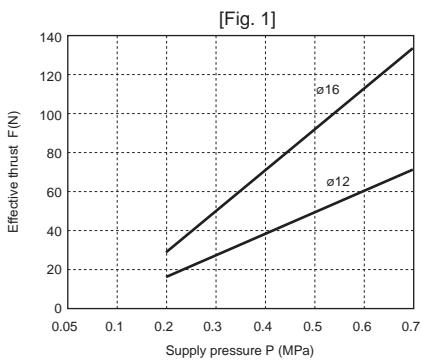

Note: Coefficient to correct the increase of friction caused when moment is applied

Bore size (mm)	C1	C2	C3
ø12 or equiv.	8	27	8
ø16 or equiv.	7	24	7
ø20 or equiv.	6	21	6
ø25 or equiv.	5	16	5
ø32 or equiv.	4	13	4
ø40 or equiv.	4	11	4
ø50 or equiv.	4	9	4
ø63 or equiv.	3	8	3

[Table 6] Load factor guidelines

Working pressure (MPa)	Load factor (%)
0.2 to 0.3	$\alpha \leq 40$
0.3 to 0.6	$\alpha \leq 50$
0.6 to 0.7	$\alpha \leq 60$

● Graph for obtaining effective thrust

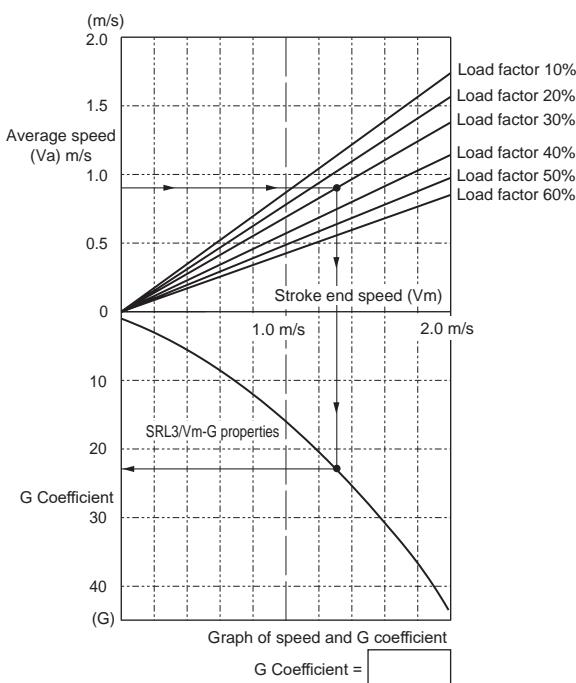

# SRT3 Series

## [STEP3]

In [Fig. 3], obtain the stroke end speed ( $V_m$ ) and G coefficient from the average speed ( $V_a$ ) and load factor obtained in STEP 2.

- Graph of speed and G coefficient [Fig. 3]

- The arrow (→) in the figure is the formula for obtaining

Stroke end speed	: 1.3 m/s
G Coefficient	: 22.5
at	
Average speed	: 0.9 m/s
Load factor	: 30%

## [STEP4]

- Calculate the resultant moment ( $M_T$ ) using the G coefficient obtained in STEP 3.

$$\begin{aligned} M_1 + M_{1i} &= \boxed{\quad} \text{ (N·m)} \\ M_2 &= \boxed{\quad} \text{ (N·m)} \\ M_3 + M_{3i} &= \boxed{\quad} \text{ (N·m)} \\ W &= \boxed{\quad} \text{ (N)} \end{aligned}$$

$$M_T = \frac{M_1 + M_{1i}}{M_{1max}} + \frac{M_2}{M_{2max}} + \frac{M_3 + M_{3i}}{M_{3max}} + \frac{W}{W_{max}}$$

Unit: N·m				
Mounting orientation	Horizontal upward	Horizontal downward	Vertical	Horizontal lateral
Dynamic moment	<b>M1i</b>		$Wx(l_3 + a)xG$	
	<b>M2i</b>		M2i dynamic moment is not generated.	
	<b>M3i</b>		$Wx\ell_2xG$	

Although the formulas are the same as those in STEP 1, use the G coefficient obtained in STEP 3 for calculation.

**$M_T \leq 1$**

**Bore size is decided.** (\* Refer to [Table 3] in STEP 1)

**Confirm cushion capacity**

**[STEP5]**

- Confirming cushion capacity

$$E = \frac{1}{2} \times m \times V_m^2$$

E : Kinetic energy at stroke end (J)

m : Load weight (kg)

V<sub>m</sub>: Speed of the piston entering the cushion (m/s)

[Table 7] Allowable absorbed energy value (E<sub>0</sub>)

Bore size (mm)	Integrated air cushion (J)
ø12	0.03
ø16	0.22
ø20	0.59
ø25	1.40
ø32	2.57
ø40	4.27
ø50	9.13
ø63	17.4

Note: SRT3 with shock absorber attached is not available.

Install an external shock absorber if the kinetic energy at stroke end: E is larger than the allowable absorbed energy: E<sub>0</sub>.

**[STEP6]**

- The bore size determined from the cushion performance is  $\square\ A$ . (Bore size determined in STEP 5)
- The bore size determined from the load conditions is  $\square\ B$ . (Bore size determined in STEP 4)
