Length measuring sensor output characteristics

(Notes)

A separate analog output ON-OFF switchover switch for retrieving the analog output voltage is required at a random 8 mm (10 mm for display) interval of the full cylinder stroke. Combinations are shown below.

Analog output ON-OFF switch model No.	Output	Measured range length
TOH/V5	Analog output	8 mm
LN-TH/V	Display	10 mm

⚠ Precautions for model selection

- *1 : Sensor and analog output ON-OFF switch cannot be installed on the same surface. (ø12, ø16 only)
- *2 : The lead wire outlet direction of analog output ON-OFF switch, the same one as the sensor, will be selected automatically. Lead wire length is 5 m specifications.
- *3 : If detection position is at "10", the detection position center is located 10 mm in front of the cylinder full stroke projecting end, with measured range length ± 4 (± 5) mm of this center point. The detecting position should be an integer.

- *4 : Two channels can be used for display. Ch1 is allocated by this model display. When using another channel, the display must be ordered separately.

A-LN-**B**C-10**D**E**F**G**I**LDS

- *5 : When ordering a single model for maintenance:

· Cylinder: **A**-LN-**B**C

· Sensor: LN-10**D**C

· Amplifier unit: LN-**H**

· Display: LN-DN

· Analog output ON-OFF switch

SW-TOH5 or TOV5: Select when the mounted actuator is ø20 and over in diameter with an analog output amplifier (LN-LS).

LN-TH or TV: Select for display.

When placing a discrete order, refer to product specifications sheet or handling precautions attached with the unit for details on setting.
